SIGMA is pleased to offer
PHOSPHATASES AND PHOSPHODIESTERASES
for the assay of the substrates indicated

More FIRSTS from SIGMA

3’-NUCLEOTIDASE
from Rye Grass  Purified Lyophilized powder
Activity: 10-15 units/mg protein
Unit definition: One unit will hydrolyze 1 μMole of Phosphorus from 3’-AMP per minute at pH 7.5 at 37°C.
Impurities determined: 3’-Nucleotidase < 1% 5’-Nucleotidase < 1% Alkaline Phosphatase < 1%
N 8503 Type III Free of Ammonium Sulfate
Approx. 75% Buffer salts
2 units $10.00  5 units $22.50  10 units $38.50
N 8753 Type IV Approx. 95% Ammonium Sulfate and Buffer salts
2 units $9.00  5 units $20.20  10 units $35.00

A substantial IMPROVEMENT in
INORGANIC PYROPHOSPHATASE
I 4503 Type III From Baker’s Yeast Lyophilized powder in vials, 500-600 units per vial.
Activity: Approx. 500 units per mg protein
Contains 85% Buffer salts.
1 vial $25.00
Unit definition: One unit will liberate 1 μMole of Inorganic Orthophosphate per minute at pH 7.2 at 25°C.

SIGMA already offers the following

PHOSPHATASES
INORGANIC PYROPHOSPHATASE
I 4000 Type I From Yeast 2x crystallized (shipped in dry ice)
I 2878 Type II From Yeast 1x crystallized (shipped in dry ice)
APYRASE
A 6312 Grade I Purified From Potato
A 6257 Grade II Crude From Potato
PHOSPHATASE, ACID
P 3627 Type I From Wheat Germ
P 3782 Type II From Potato
5’-NUCLEOTIDASE
N 8877 Grade II From Crotalus Adamanteus Venom Powder
PHOSPHATASE, ALKALINE
P 3877 Type I From Calf Intestinal Mucosa
P 4127 Type II From Calf Intestinal Mucosa
P 4552 Type VII From Calf Intestinal Mucosa
P 4002 Type IV From Hog Intestinal Mucosa
P 8508 Type V From Chicken Intestinal Mucosa Partially purified Lyophilized
P 4252 Type III Bacterial (E. Coli) Chromatographed
P 4377 Type III-S Bacterial (E. Coli) Salt Fractionated

PHOSPHODIESTERASES
PYROPHOSPHATASE, NUCLEOTIDE
P 7385 Type II From Crotalus Adamanteus Venom Lyophilized powder
PHOSPHODIESTERASES
P 6732 Type I From Bovine Spleen
P 6877 Type II From Crotalus Adamanteus Venom Lyophilized powder
P 4381 Type III Micrococcos lysodeikticis cells Acetone powder
P 4506 Type IV Crude From Crotalus Atrox Venom
P 4631 Type V Crude From Bothrops Atrox
P 6134 Type VI Crude From Crotalus Adamanteus Venom

For more details, please consult our latest Price List.
It’s a pleasure doing business with SIGMA
Sigma Reagents are available through select dealers World over or directly from St. Louis.

ORDER DIRECT—TELEPHONE COLLECT from ANYWHERE in the WORLD

Defined polymers for biological research

- Viral genetics
- Separation of blood cells
- Enhancement of plaque formation
- Stimulation of cellular uptake of macromolecules
- Isolation media for subcellular organelles
- Density gradient centrifugation

DEXTRAN FRACTIONS
as stabilizing colloids, in two-phase systems, for separation of leucocytes from whole blood.

A complete range of dextran fractions $M_W$ 10,000—2,000,000 available. Each fraction is well characterized physically and chemically. Molecular weight distribution curves are included with each batch.

DEXTRAN SULPHATE
has strain specific effects on plaque formation by viruses. It selectively precipitates B-lipoprotein for turbidometric estimation or removal from culture media.

Prepared from dextran $M_W$ 500,000. Sulphur content 17% as sulphate.

DEAE-DEXTRAN
stimulates cellular uptake of nucleic acids and proteins, enhances plaque formation by viruses, infective RNA and antibody-forming cells.

Prepared from dextran $M_W$ 500,000. Nitrogen content 3.2% as diethylaminoethyl groups.

FICOLL
for linear and discontinuous density gradients, does not penetrate cell membranes. Ficoll solutions have low viscosity and low osmotic pressure.

Prepared from sucrose by cross linking with epichlorohydrin. $M_W$ 400,000.

Full details of these interesting compounds and their applications are given in the Ficoll booklet and the new booklet on Dextran and Dextran Derivatives available directly from Pharmacia (Great Britain) Ltd., or from our sales representative in your country.
Antisera and immunodiffusion plates* to the immunoglobulins:

- IgA (α-chain)  
- IgG (S-chain)  
- IgE (ε-chain)  
- IgM (μ-chain)  
- IgG (Y-chain)  
- IgG (H+L chain)  

- IgG (Fab fragment)  
- IgG (Fc fragment)  
- IgG (Fd fragment)  
- Immunoglobulins  
- Immunoglobulins (L-chain Type K)  
- Immunoglobulins (L-chain Type L)  
- Bence-Jones (free κ-chain)  
- Bence-Jones (free λ-chain)  
- Gm typing sera, 1, 2, 4, 12  
- Inv typing sera, 1  

Antisera and immunodiffusion plates* to human proteins:

- Albumin  
- α1-acid glycoprotein  
- α1-antichymotrypsin  
- α1-antitrypsin  
- α2-glycoprotein  
- α1-glycoprotein  
- α2-HS-glycoprotein  
- α2-macroglobulin  
- α2-Zn-glycoprotein  
- β2-lipoprotein  
- C1r/C1s, A-globulin  

- β1-E-globulin  
- β2-glycoprotein 1  
- β2-glycoprotein 2  
- β2-glycoprotein 3  
- carbonic anhydrase B  
- carbonic anhydrase C  
- ceruloplasmin  
- cholinesterase  
- C-reactive protein  
- factor XIII  
- (fibrin stabilising)  

- fibrinogen  
- Gc-globulin  
- haemopexin  
- haptoglobin  
- inter-α-trypsin inhibitor  
- plasminogen  
- prealbumin  
- prothrombin  
- transferrin  
- uromucoid  
- human semen  
- human serum

Antisera to animal proteins:

Polyvalent antisera to:
- bovine, canine, cat  
- chicken, ferret, golden hamster, guinea pig, horse, mouse, porcine, rabbit, rat, rhesus monkey and sheep serum.

Specific antisera to:
- bovine albumin  
- bovine fibrinogen  
- bovine γ-globulin  
- guinea pig γ-globulin  
- horse γ-globulin  
- mouse γ-globulin  
- rabbit γ-globulin  
- porcine IgG  
- porcine IgM  
- porcine insulin (titre 1:20,000)

at Behringwerke

Antisera and immunoquantitative plates

A. Polak, J. I. S. Robertson, B. Robinson, S. J. G. Semple

VOLUME 40, NO. 4 APRIL 1971

CONTENTS

The effect of enzymatic depolymerization of arterial mucopolysaccharides on sodium ion content and vessel reactivity. G. S. Harris and W. A. Palmer

The causes of hypocalcaemia in chronic renal failure. M. Cochran and B. E. C. Nordin

Isotope studies in normal and diseased knee joints: $^{99m}$Tc uptake related to clinical assessment and to synovial perfusion measured by the $^{133}$Xe clearance technique. W. C. Dick, S. D. Deodhar, Carol J. Provans, G. Nuki and W. W. Buchanan

Serum protein changes after injury. H. G. Minchin Clarke, T. Freeman and W. Pryse-Phillips

Metabolism of palmitic and linoleic acids in man: differences in turnover and conversion to glycerides. P. J. Nestel and P. Barter

MEDICAL RESEARCH SOCIETY (Meeting held on 26 March 1971)
Symposium on the Clinical and Biochemical Significance of Serum Lipoproteins
Communications
Demonstrations

Subscription: £2.00 ($7.50) per part; £20 ($70.00) per year.
Orders may be placed with your bookseller, or sent direct to the publishers.

BLACKWELL SCIENTIFIC PUBLICATIONS LTD
5 ALFRED STREET, OXFORD, OX1 4HB, ENGLAND
Contents

Peptides and proteins; Antigens and immunogenicity
Belgian-German joint biochemical meeting
Observations on the affinity between polyamines and nucleic acids
O. Heby and I. Agrell
Interaction between spermine and histones at nucleoprotein formation
I. Agrell and O. Heby
The influence of iron on the biosynthesis of porphyrins and the prosthetic group of cytochrome b in Achromobacter metalcaligenes
M. Doss and W. K. Philipp-Dormston
The location of an essential histidine residue at the substrate binding site of lactate dehydrogenase
J. Berghäuser, I. Falderbaum and Ch. Woenckhaus
Glycolytic metabolism of endogenous material after glucose addition to starved yeast
W. Rambeck, H. Wacker and H. Simon
Stimulation of the metabolism of endogenous material in starved yeast by addition of alcohols and other compounds
W. Rambeck and H. Simon
Studies on neuraminic acid-free glycosphingolipids from bovine spleen
G. Tschöpe

On the ortho-hydroxylation of aromatic carboxylic acids in higher plants
H. Kindl
Lack of permeation of coenzyme A from blood into liver cells
W. Domschke, M. Liersch and K. Decker
Isolation and purification of α1-acid glycoprotein from human liver
L. C. Patrütio and A. Martin
Transformation of glutamic acid, putrescine and ornithine into γ-aminobutyric acid in brain
N. Seiler and B. Knödgen

Short communications
The sphingosine bases of the brain gangliosides accumulated in two variants of the infantile amaurotic idiocy
E. Klenk and M. Naoi
Measurement of the standard redox potential (pH 7.0) of cytochrome b4 (Fe3+) /cytochrome b4 (Fe3+) in microsomal membranes under different conditions
H. Weber, W. Weis and Hj. Staudinger
The primary structure of a monoclonal κ-Type immunoglobulin-L-chain (Bence-Jones protein Au): linked amino acid exchanges within subgroups
H. Schiechl and N. Hilschmann

Miles-Seravac is Enzymes

The association of Seravac with the Research Products Division of Miles Laboratories has created a fountainhead for enzymes offering you the most comprehensive range ever prepared in the Laboratories of any one organization.

ENZYMES for Diagnostic Research Applications Manual and Automated
ENZYMES for Radiochemical Assays of Catecholamines
ENZYMES for Pharmaceutical Research Use.
ENZYMES Insolubilized ENZITE®
ENZYMES for Research

Miles-Seravac now services the entire U.K. and Europe for the distribution of all the products of the Research Products Division. Lausanne, Switzerland, will similarly maintain a comprehensive coverage of Europe and will provide an 'on the spot' technical service.

We don’t try to hide the special brand of service we give every customer. Every order. Every time.

Putting service first has kept us first in our field. So has our stock of more than 4000 biochemical items . . . the finest, purest, and most complete line you’ll find anywhere. Our prices are truly competitive, too, because we do business with customers the world over.

Speedy delivery is another of our strong points. Within just one hour of receiving your order, we’ve filled it, checked it five separate times for accuracy, and sent it on its way. At your request, we’ll send exactly what you need, anywhere in the United States, in just 24 short hours. And we’ll guarantee anywhere-in-the-world delivery in only 80 hours.

For all your biochemical needs, call NBCo. We’ve got great things up our sleeve.

Please send the NBCo. information which I have checked below to:

We’re proud of our service record.
Now put an end to mouth pipetting!

The Oxford Laboratories sampler has allowed a tremendous improvement in the ACCURACY, PRECISION AND SAFETY of pipetting in thousands of laboratories throughout the world. With the addition of the DUAL and TRIPLE range instruments it is now economically possible for every laboratory to put an end to mouth pipetting.

DUAL RANGE SAMPLER
2 different volumes can be selected.

TRIPLE RANGE SAMPLER
3 different volumes can be selected.

Like the Mono-Sampler the Dual and Triple range will pick up and dispense serum or aqueous solution with a precision of ± 1%. Meniscus readings and the errors they cause are eliminated.

The sample material is drawn into a disposable polypropylene tip. It never enters the instrument, and as a fresh tip is used for each sample there is no possibility of cross-contamination.

The disposable tips are non-wetting. This eliminates the need to rinse the tip of any residual sample, and provides the advantage of a rapid "to deliver" technique with the precision of a "to contain" method.

Many different sizes are available up to 1.0ml please write for details.
