ANNUAL REVIEW OF BIOCHEMISTRY

Critical, informative and timely reviews of progress in active areas of research. Each article is written by an internationally known expert in his field.

Editors: E. E. Snell, P. D. Boyer, A. Meister, R. L. Sinsheimer

Contents:

approx. 1170 pages

Some Personal History and Reflections from the Life of a Biochemist ............ John T. Edsall
Complex Polysaccharides ............................................................ Edward C. Heath
Sphingolipids ................................................................. Wilhelm Stoffel
Long-Range Nonradiative Transfer of Electronic Excitation Energy in Proteins and Polypeptides .................... Ischak Z. Steinberg
Oxidation and Energy Conservation by Mitochondria .... Karel van Dam and Alfred J. Meyer
Chloroplast Structure and Biogenesis ............................................ J. T. O. Kirk
Photosynthesis: The Electron Transport System of Green Plants ............... Norman I. Bishop
Spin-Label Studies of Cooperative Oxygen Binding to Hemoglobin ............ Harden M. McConnell
Oscillatory Phenomena in Biochemistry ........................................ Benno Hes and Arnold Boiteux
Affinity Chromatography ....................................................... Pedro Cuatrecasas and Christian B. Anfinsen
Histones: Structure and Function ............................................. Robert J. DeLange and Emil L. Smith
Transients and Relaxation Kinetics of Enzyme Reactions ....................... H. Gutseend
Metabolic Regulation by Chemical Modification of Enzymes .................... Helmut Holzer and Wolfgang Dunzte

Ultrastructural Localization of Enzymes ...................................... Theodor K. Schmitka and Arnold M. Seligman
Peptide Transport and Metabolism in Bacteria .................................. Arthur J. Susman and Charles Gilvarg
Protein Biosynthesis .............................................................. Jean Lucas-Lenard and Fritz Lipmann
Bioynthesis of Peptide Antibiotics ............................................ D. Perlman and M. Bodanszky
Biochemistry of Catecholamines ............................................. Perry B. Molinoff and Julius Axelrod
Metabolic Role of Vitamina A and D .......................................... R. H. Waterman and R. A. Corradino
Pheromones ................................................................. John H. Law and Fred E. Regnier

Nutritional Methodology in Metabolic Research with Rats ............ Heather Greenfield and George M. Briggs

Clinical Biochemistry .............................................................. M. L. Moss, C. A. Horton, and J. C. White
Applications of Nuclear Magnetic Resonance Spectroscopy to the Study of Macromolecules ...................... Oleg Jardetzky and Norma G. Wade-Jardetzky
Proteins of the Nervous System ................................................ E. M. Shooter and Elizabeth Roboz Einstein
Protein-Protein Interaction and Enzymatic Activity ....................... Carl Frieden
Inhibitors of Ribosome Function ................................................ Sidney Pestka
RNA Polymerase ................................................................. Richard R. Burgess
Cyclic AMP ................................................................. Jean-Pierre Jost and H. V. Rickenberg
Antibiotics and Nucleic Acids .................................................. Irving H. Goldberg and Paul A. Friedman
The Biological Significance of Purine Salvage ................................ Andrew W. Murray
Lysozyme: Viral Repression and Site-Specific Recombination .................. H. Echols
Bioynthesis of DNA .......................................................... Mehran Goulian
Circular DNA ................................................................. Donald R. Helinshi and Don B. Clewell

Regulation of Biosynthetic Pathways in Bacteria and Fungi ........... Joseph M. Calvo and Gerald R. Fink

Antibody Diversity .............................................................. George P. Smith, Leroy Hood, and Walter M. Fitch
Structure and Function of Proteins ........................................... G. P. Heis and John A. Rupley
Recent Results of RNA Research ............................................... D. H. Gauss, F. von der Haar, A. Maeliche, and F. Cramer
Insect Juvenile Hormone Analogues ........................................... Karel Slama

Clothbound, with subject, author, and cumulative indexes.

PRICE postpaid: $3.00 (USA) and $3.50 (elsewhere)

Back volumes and reprints available. Quantity discounts and student rates offered on all volumes.

For protein synthesis

A choice of three carbon-14 labelled amino-acid mixtures

Equimolar mixture for t-RNA
Specially provided for those studying acceptor-activity of t-RNA. An equimolar mixture of amino-acids-C14(U), each amino-acid having a specific activity accurately adjusted to 10mCi/mmole. Code No CFB : 152

High specific activity mixture
A mixture of individually purified amino-acids uniformly labelled with carbon-14. The amino-acids are mixed in approximately the same proportions as in typical algal protein hydrolysate. The current batch has an isotopic abundance of carbon-14 of 87% (54 mCi/matom of carbon). Code No CFB : 104

Purified Protein Hydrolysate — for economy
Protein hydrolysate-C14(U)—obtained by the acid hydrolysis of algal protein. The products of hydrolysis are extensively purified by ion exchange and paper chromatography to give an amino-acid content of not less than 95%. This is still the most economical protein labelling mixture available. Code No CFB : 25

Sole supplier
The Radiochemical Centre is the only radiochemicals supplier able to offer you a readily available choice of products in this field. If you are interested in protein synthesis (or any other application of radiochemical products) please write for further information.
Is this all you want when you buy NADH?

The extinction coefficient of the purest NADH is $6.22 \times 10^6\text{cm}^2/\text{mole at 340 nm}$. But this doesn't tell you how it performs in your enzymatic reaction.

That's why all Boehringer Mannheim nicotinamide coenzymes are assayed enzymatically as well as optically. When you use Boehringer Mannheim NAD$^+$, NADH, NADP$^+$ and NADPH you can therefore be sure that they are tested from a functional viewpoint.

Analytical specifications can be found in our catalogue. Please write for your personal copy.

The Boehringer Corporation (London) Ltd., Bilton House, Uxbridge Road, London W5 2TZ
G-6-PD Deficiency
D. F. Keller, MD.
(CRC Monoscience Series)
Although G-6-PD deficiency has been recognized for only a little more than a decade, several hundred papers have now appeared dealing with one aspect or another of the problem. These have been distributed through a wide variety of publications, producing a fairly complete prototype of a genetically determined deficiency of a single enzyme. This book reviews the entire problem in some detail and integrates many of the more recent contributions to our knowledge of G-6-PD, its function and its deficiency states.
0 408 70190 70 pages illustrated 1971 £5.00

Sugar
(Chemical, Biological and Nutritional Aspects of Sucrose.)
Edited by Prof. J. Yudkin, PhD, MD, MRCP, FRIC, Prof. J. Edelman and Prof. L. Hough.
The contributions to this volume have been planned so as to emphasise the astonishing and unique role played by sucrose in widely varied aspects of chemistry, biology and medicine.
Contents: Sucrose as a Food. The Chemistry of Sucrose. Sucrose in the Plant. The Absorption and Metabolism of Sucrose in Animals. Sucrose and Human Disease.
0 408 70172 2 1224 pages illustrated 1971 £4.50

Progress in Medicinal Chemistry
Volume 8 Part I
Edited by G. P. Ellis, BSc, PhD, FRIC and G. B. West, DSc, PhD.
In order to reduce the time-lag between the receipt and publication of a review, each volume of *Progress in Medicinal Chemistry* is published in two parts at approximately six-monthly intervals.
0 408 70167 6 176 pages illustrated 1971 £3.75
Subscription rate for Parts I and II £6.00

Pollen: Development and Physiology
Edited by Professor J. Heslop-Harrison, FRS.
This volume includes 11 major reviews covering these and other aspects of modern pollen research, as well as 25 abstracts of papers on associated topics presented at three recent international meetings. Collectively they provide a comprehensive survey of the field, as well as an indispensable guide to pollen literature and the orientations of current work.
0 408 70149 8 322 pages (approx.) illustrated 1971 £7.00

The Centriscan 75 meets, at relatively low cost, the needs of the many scientists who wish to use the analytical centrifugal technique but do not require the full facilities of a classical Analytical Ultracentrifuge. However, with recording of the absorbance of up to four samples at a time, the Centriscan 75 is capable of work of the highest precision, even on sub-microgram quantities - work that was previously possible only with much more expensive equipment. In addition, the 75,000 r.p.m. preparative capability gives unique versatility.

Unique optical system
Immediate results from direct traces – no cameras
Absorption scanning down to 254nm
Refractometric scanning technique giving Schlieren traces
Brushless motor - no gearbox - ideal for equilibrium runs
Preparative rotors to 75,000 r.p.m. - 500,000 x 'g'

The action of testosterone propionate on the formation of precipitating antibodies against human serum albumin (Germ.)

A. OBERDORFER and K. HERMANN

The effect of cyproterone acetate on the testosterone biosynthesis in rat testes (Germ.)

K. ENGEL and R. KARZENIA

Subunits from the thylakoids of *Rhodopseudomonas rubrum* after treatment with the detergent Triton X-100 (Germ.)

M. BIEDELMANN

Studies on the reattachment of ribosomes and ribosomal subunits to ribosome-free membranes prepared from rat liver microsomes by means of lithium chloride (Engl.)

T. SCOTT-BURDEN and A. O. HAWTREY

The evolution of endopeptidases. XIII: Biochemical and immunological studies on trypsin and a low-molecular protease from the decapode *Carcinus marinus* L. (Germ.)

D. HERBOLD, R. ZWILLING and G. PFEIDERER

Protein biosynthesis in isolated rat brain nuclei (Germ.)

H. FLEISCHER-LAMBROPOULOS and I. REINSCH

Sweet almond emulsion. Further investigations on the molecular weight and some differences in the properties of components A and B (Germ.)

T. KLEDSCHMIDT and J. HORST

CD and ORD spectra of cytochrome b1 (Studies of cytochrome b1 from the microsomes of pig liver) (Germ.)

E. SCHNELLBACHER and L. LUMPER

Interactions between 1111-insulin and a2-macroglobulin (Germ.)

H. K. DURR and E. KALLE

Microfluorimetric study of drug induced metabolic adaptations (Engl.)

E. KOHEN, C. KOHEN and B. THORELL

SHORT COMMUNICATIONS

The primary structure of a monoclonal x1-type immunoglobulin-L-chain (BENCE-JONES Protein B1): Variability rule for x-chains (Germ.)

M. BRAUN, W. LEIBOLD, H.-U. BARNIKOL and N. HILSCHMANN

Glycosaminoglycans of compact bone tissue from normal and dexamethasone-treated rabbits (Engl.)

L. VESLENS

An improved method for handling acid-labile amino-acid and peptide-derivatives (Germ.)

R. SPANGENBERG, P. THAMM and E. WUNSCH
high performance-
low cost  LIQUID SCINTILLATION COUNTER NE 6500

* Coincidence counting of Tritium and Carbon-14:
  for Tritium  55% with 25cpm background;
  for Carbon-14 90% with 60cpm background
* On-line measurement of Tritium, and low energy beta-emitting isotopes, for gas chromatography, reactors etc.
  Typical efficiencies with NE 808 Flow Cell:
  for Tritium in liquid  1.5% with 3cps background;
  for Carbon-14 in liquid 18% with 1.5cps background
* External scintillation counters can be directly connected e.g. gamma well
* Large volume (up to 100ml) samples can be accommodated
* Dual channel operation

Full details of NE 6500, NE 8312 Automatic Beta-Gamma Spectrometer and range of Liquid Scintillators available on request.

THIOL REAGENTS

Ellman’s Reagent DTNB
Cat. No. D21,820-0  10g.–$17.00

Used for the determination of total protein bound and non-protein sulphydryl groups in tissue. Gibson and co-workers have reported an assay for a specific enzyme using DTNB.

Aldrithiol-2
Cat. No. 14,304-9  5g.–$9.90  25g.–$33.00

For determination of thiol groups over a wider pH range than Ellman’s Reagent.

Aldrithiol-4
Cat. No. 14,305-7  5g.–$13.05  25g.–$43.45

Similar to Aldrithiol-2. It has been used to determine the thiol group of thyroglobulin.

6,6’-Dithiodinicotinic acid
Cat. No. 15,820-8  5g.–$12.00  25g.–$43.00

Offers greater solubility than Aldrithiol-2 in aqueous buffer.

2,2’-Dithiobis-(5-nitropyridine)
Cat. No. 15,819-4  10g.–$10.50

Has the advantage of giving a colored derivative with thiols and can be used in various common solvents. This has been shown to be ideally suited for use in detection of thiols after separation by paper chromatography.
