I. MacIntyre, K. L. Manchester, J. A. Owen, R. W. E. Watts

For the Medical Research Society
J. S. Robson, Deputy Chairman
R. D. Cohen, W. I. Cranston, G. Cuming, D. M. Matthews,
A. Polak, J. I. S. Robertson, B. Robinson, S. J. G. Semple

VOLUME 42, NO. 1  January 1972

CONTENTS

The oxygen-transporting system in relation to age. By C. T. M. Davies

The effects of sodium loading and deprivation on plasma renin and plasma and urinary aldosterone in hypertension. By J. P. Coghlan, A. E. Doyle, G. Jerums and B. A. Scoggins

Ragweed pollen: morphological changes on incubation with saliva from ragweed-allergic and non-allergic humans. By L. W. Mayron and R. J. Loiselle

Effect of arterial CO₂ pressure on the response of cerebral and hind-limb blood flow and metabolism to isoprenaline infusion in the dog. By C. Xanalatos and I. M. James

The association of a humoral sodium transport inhibitory activity with renal escape from chronic mineralocorticoid administration in the dog. By V. M. Buckalew, Jr. and C. D. Lancaster, Jr.

The proteinases of human gastric adenocarcinomata: their identification, separation and sites of action on the B-chain of oxidized insulin. By D. J. Etherington and W. H. Taylor

The role of angiotensin II in the control of aldosterone in man. By G. W. Boyd, A. R. Adamson, Marion Arnold, V. H. T. James and W. S. Peart

Intestinal ammonia in uraemia: the effect of a urease inhibitor, acetohydroxamic acid. By J. D. Swales, J. D. Tange and D. J. Evans

Communications

Subscription: £2.00 ($7.50) per part; £20.00 ($70.00) per year.
Orders may be placed with your bookseller, or sent direct to the publishers.

BLACKWELL SCIENTIFIC PUBLICATIONS LTD

5 ALFRED STREET, OXFORD, OX1 4HB, ENGLAND
Again our busy research workers bring you more new biochemicals

20 New enzymes
plus two enzyme inhibitors.

9 New Molecular Biologicals
plus BD Cellulose.

4 New Substrates
plus 3 other new biochemicals

Combisets
Biochemical sets for standardisation and comparison.

Enzymes
β-amylase
L-arginase
Arylsulphatase
Bromelain
Carbonic Anhydrase
Carboxypeptidase-A
Carboxypeptidase-B
Deoxyribonuclease Grade I
Deoxyribonuclease Grade II
Enzyme® - Papain
β-glucosidase
β-glucuronidase
Neuraminidase
Nuclease
Nucleoside-diphosphate kinase
Papain
Pepsin
Pepsinogen
Phosphatase alkaline
UDPG pyrophosphorylase

Enzyme Inhibitors
Trypsin inhibitor-soya bean
Trypsin inhibitor-egg white

New Substrates
Ethanolamine
β-glucose-6-phosphate
DL-3-Hydroxybutyrate
Succinyl-L-phenylalanine-p-nitranilide

Molecular Biologicals
BD Cellulose
Ribonucleic acid (soluble)

Nucleosides
2'-deoxy-adenosine
2'-deoxy-cytidine
2'-deoxy-guanosine
2'-deoxy-thymidine

Nucleotides
Deoxy-thymidine-5'-diphosphate
Uridine-5'-diphospho-galactose
Poly A-C
Poly I-C
Xanthosine-3',5'-monophosphate cyclic

Combisets
Casein by Hammarsten
Calibration Protein set
Haemoglobin by Anson
Insulin Chain A
Insulin Chain B
Insulin Chains A & B

Other Biochemicals
Coenzyme A Grade II
Insulin Chain A
Insulin Chain B

A Guidebook to Biochemistry
M. D. YUDKIN and R. E. OFFORD

An introductory text for students in schools, colleges and universities who are beginning courses in biochemistry, either by itself, or as a background for work in biology, medicine, agriculture or pharmacology. This is not a lengthy comprehensive treatise. The authors have selected some crucial concepts of biochemistry and these are exemplified and discussed. It is based on Kenneth Harrison's successful Guidebook to Biochemistry, but has been completely revised and rewritten.

Cloth £3.20 net
Paperback £1.00 net

The Biology of the Cell Cycle
J. M. MITCHISON

The first comprehensive and critical review of the biology of the cell cycle to cover the whole field from bacteria to mammalian cells. The main emphasis is on the patterns of synthesis throughout the cycle, but there is also a more speculative chapter on the control of cell divisions. An important feature is the extensive bibliography of some 1,000 references which will prove useful to students in the field of cell biology.

Cloth £4.60 net
Paperback £1.60 net

Machina Carnis
The biochemistry of muscular contraction in its historical development
DOROTHY M. NEEDHAM FRS

An account of the centuries of experiment and speculation that have led to our present understanding of how muscles work.

This book traces all the developments in the field since 1600 and devotes special attention to the breakthroughs made in this century. The nature of the muscle as a machine, and its fuel, is considered as well as the intricate regulation of energy supply under different conditions. It also examines the very varied kinds of muscle and the effects of some diseases on their structure and function.

THE BIOCHEMICAL JOURNAL
A DNA polymerase from *Ehrlich* ascites tumor cells with preference for native DNA

K. HARM, H. HILZ and M.-M. OLDEKOP

Isolation and purification of a calcium-binding protein from human tissues

P. PIAZOLI, M. SCHLEYER and H. E. FRANZ

Bis(β-butoxycarbonyl)insulin

R. GEIGER, H.-H. SCHÖNE and W. PFAFF

Studies in vitro on the biosynthesis of corticosteroids in rat adrenal gland and on the action of ACTH, II: Comparison of the synthesis from endogenous precursors with that from exogenous [4-14C]cholesterol, [4-14C]pregnenolone and [4-14C]progesterone

D. LOMMER, R. I. DORFMAN and E. FORCHIELLI

The purification of thymidine kinase from *Escherichia coli* by affinity chromatography

W. RÖHR and A. G. LEZIUS

Inhibition of acylneuraminic-pyruvate lactonizing enzyme: Evidence of intermediary Schiff base formation and of a possible role of histidine residues

R. SCHAUER and M. WEMBER

The properties of carboxypeptidase C from orange leaves

B. SPRÖSSLER, H.-D. HEILMANN, E. GRAMPP and H. ÜHLIG

Metabolism of sphingosine bases, XVII: Stereo-specificities in the introduction of the 4t-double bond into sphinganine yielding 4t-sphingenine (sphingosine)

W. STOFFEL, G. ASSMANN and K. BISTER

Ribosomal proteins, XI: Isolation of proteins from 70S ribosomes of *Escherichia coli*

E. KALTSCHMIDT, V. RUDLOFF, H.-G. JANDA, M. CECH, K. NIERHAUS and H. G. WITTMANN

Chromophoric substrates, IV: A new substrate for the quantitative determination of chymotrypsin A

E. WÜNSCH, A. HÖGEL-BETZ and A. JÄGER

Chromophoric substrates, V: The determination of collagenase with N-[(azulen-4-yl)acetyl]peptides

E. WÜNSCH, E. JÄGER and G. SCHÖNSTEINER-ALTMANN

Chromophoric substrates, VI: On the specificity of collagenase

E. WÜNSCH, E. JÄGER and G. SCHÖNSTEINER-ALTMANN

Chromophoric substrates, VII: On the specificity of carboxypeptidase B

E. WÜNSCH, E. JÄGER and G. SCHÖNSTEINER-ALTMANN

Chromophoric substrates, VIII: Mass spectral investigations on N-[(azulen-4-yl)acetyl]peptides

E. WÜNSCH and E. JÄGER

Protease inhibitors in human sperm plasma. Isolation by affinity chromatography and inhibition characteristics

E. FINK, E. JAUMANN, H. FRITZ, H. INGRISCH and E. WERLE

[1]-p-iodophenylalanineinsulin, a homogenous moniodoinsulin

G. KRALL, D. BRANDENBURG, H. ZAHN and R. GEIGER

Pteridines in the honey bee *Apis mellifica*: Isolation of new lumazines

J. H. DUSTMANN

Chromatographic separation of gangliosides on precoated silicagel thin-layer plates

D. H. VAN DEN EIJNDEN
ENZITE™ a stable and reusable form of enzyme activity.

for the purification and isolation of enzymes.

for the purification and isolation of antibodies and antigens.

for the insolubilization of proteins.

The combined efforts of Miles-Seravac and Miles-Yeda
have provided the research investigator with the world's most comprehensive selection of insolubilized biochemicals.

The following technical brochures listing products with full specifications, methods of use and references are available on request.

ENZITE™ brochure No. 2. Insolubilized Enzymes
ENZITE™ brochure No. 3. Insolubilized Biochemicals.

Special attention! GLYCOSYLEX-A™ (Insolubilized Concanavalin A)
See brochure 'Concanavalin A and Related Products.'

EEDQ: BEST BY TEST

We sell just about every peptide reagent, were the first to offer DCC (and remember with a slight shudder the 39 complaints we received because our material was a waxy solid; the first literature reference had stated that it was a liquid which would not crystallize) and have even sold thousands of bottles of Woodward’s Reagent K, despite its relatively high price. However, no peptide reagent has excited our imagination quite as much as EEDQ.1,2 Not only because it is also a most interesting pharmacologic tool3 for the study of both the central and peripheral adrenergic nervous system but because it really appears to be the ideal peptide reagent: peptide formation in high yields at room-temperature with practically no racemization. For instance, in two peptide syntheses, Woodward’s Reagent K gave after 24 hours 72 and 95% yields and 1.7 and 1.8% racemization. EEDQ gave after 7 hours yields of the same peptides of 91 and 97% with 0.2% racemization. Probably that racemization was due only to the tertiary amines used; Professor Belleau recommends that EEDQ be used without tertiary amines. Also, EEDQ is so inexpensive that it will become a general reagent for amide formation. Its advantages over DCC are obvious: it is not a skin-irritant, yields are generally higher, and all the reaction byproducts are volatile, leaving the peptide as the only solid residue.

No. 14,983-7 EEDQ 99%+, Gold Label 5 g.—$5.75; 25 g.—$15.50
No. 15,207-2 EEDQ 97%+ (satisfactory for all synthetic reactions)
25 g.—$6.25; 100 g.—$16.75; 5 kg.—$95/kg.

EEDQ is licensed under U.S. Patent No. 3389142.

(2) B. Belleau, ibid, 90, 823 (1968).

OTHER PEPTIDE COUPLING REAGENTS AVAILABLE

No. 11,553-3 N,N'-carbonyldiimidazole, 98%
No. C10,640-2 1-cyclohexyl-3-(2-morpholinoethyl)-carbodiimide metho-p-toluenesulfonate, 99%
(the water soluble carbodiimide of choice)
No. D800-2 DCC, 99%
No. T7760-5 Trimethylacetyl chloride (pivaloyl chloride), 99%
No. E4552-0 Woodward’s Reagent K (NEPIS), 95%
No. B9695-3 Woodward’s Reagent L, 97%
