Here is the CENTRISCAN 75

A simpler and less expensive version of the classical analytical ultracentrifuge — but with a built-in scanner and full preparative facilities

The MSE Centriscan 75 is no compromise; it combines full preparative and analytical facilities — one centrifuge to buy instead of two. On the analytical side it is capable of work of the highest precision and sensitivity, recording absorbance of up to four samples in the same rotor.

The optical system is a unique form of split-beam scanner operating down to 254nm and scans are drawn directly on a recorder — no cameras! A simple changeover converts the instrument to refractometric scanning and permits the recording of Schlieren diagrams. On the preparative side, 75,000 rpm gives 500,000 x ‘g’ — and unique versatility. Ask now for Publication No. 501

Another FIRST from Sigma

COMPLETE OFFERING OF ENZYMES AND SUBSTRATES FOR
"LELOIR PATHWAY"

GALACTOSE METABOLISM • GLUCURONIDE SYNTHESIS

For the first time, all enzymes and substrates for the "Lebor Pathway", Galactose Metabolism and Glucuronide Synthesis are available. Many of the following preparations are offered here for the first time anywhere. Prices are tentative. Many have already been substantially reduced. Others will be reduced as demand warrants.

SINCE MOST ENZYMES ARE ABOUT 30% MORE ACTIVE AT 30°C THAN AT 25°C, REACTIONS PROCEED AT HIGHER TEMPERATURES MAY RESULT IN SAVING TIME AND MATERIAL.

GALACTOKINASE
G0330 From Yeast. Present lot contains 75% Buffer Salts. Approx. 30-50 units/mg Protein
Unit Definition: One unit will convert 1 μMole of Galactose to Gal-1-P per min. at pH 7.0 at 25°C.
Approx. 1% Hanks kinase impurity
2 units $ 5.50 20 units $25.00
5 units 10.00 100 units 75.00

GALACTOSE-1-PHOSPHATE UTP
URIDYL TRANSFERASE
G8128 From Yeast. Present lot contains approx. 85% Buffer Salts. Approx. 2 units/mg Protein
Unit Definition: One unit will form 1 μMole of G-1-P from UDP and Gal-1-P per min. at pH 8.7 at 25°C.
Approx. 5% UDPG Pyrophosphorylase impurity
2 units $ 5.00 50 units $75.00

PHOSPHOGLUCOMUTASE
P7502 From Rabbit Muscle. Crystalline. Ammonium Sulfate Suspension. 80-130 units/ml Protein.
Unit Definition: One unit will convert 1 μMole of G-1-P to G-6-P per min. at pH 7.4 at 30°C.
200 units $ 7.90 1000 units $28.00
500 units 18.00 2500 units 56.00

URIDINE-5'-DIPHOSPHOGLUCOSE DEHYDROGENASE
U5500 Powder. Buffered preparation. From Bovine liver. Approx. 500 units/mg Protein
Unit Definition: One unit will convert 4.0 × 10^-4 μMoles of UDPG/min. at pH 8.7 at 25°C.
10,000 units $9.90 20,000 units $16.50
50,000 units $33.00

URIDINE-5'-DIPHOSPHOGLUCOSE PYROPHOSPHORYLASE
U1801 From Yeast. Ammonium Sulfate Suspension. Approx. 45 units/mg Protein
Unit Definition: One unit will cause the formation of 1.0 μMole of G-6-P from UDPG and Inorganic Pyrophosphate per min. at pH 7.0 at 25°C.
Impurities include Alcohol Dehydrogenase and GDPD
25 units $ 6.50 500 units $ 60.00
100 units 18.00 1000 units 100.00

URIDINE-5'-DIPHOSPHOGLUCURONYL TRANSFERASE
U3526 From Rabbit liver. Crude microsomal preparation. Present lot contains approx. 10% Buffer Salts. Approx. .0015 units/mg Protein
Unit Definition: One unit will transfer 1.0 μMole of Glucuronic Acid from UDPG to Phenolphthalein per min. at pH 8.0 at 37°C.
Present lot contains Glucuronic impurity approx. 0.001 Molar units per mg at pH 4.5; approx. 0.000005 Molar units/mg at pH 8.0.
2 units $ 6.50 25 units $30.00
5 units $ 12.50 50 units $ 60.00

α-D-GALACTOSE-1-PHOSPHATE
G3830 Dipotassium Salt. Enzymatically prepared. Purity: 98-100%. Substantially free of G-1-P.
10 mg $ 4.60 250 mg $ 54.00
50 mg 16.20 500 mg 90.00
100 mg 27.00 1 g 150.00
Also available—See our Catalog or inquire:
D(+)-GALACTOSE
α-D-GALACTOSE-1-PHOSPHATE (synthetic)
α-D-GLUCOSE-1-PHOSPHATE
α-D-GLUCURONIC ACID
UREIDINE-5'-DIPHOSPHOGLUCURONIC ACID
UREIDINE-5'-DIPHOSPHOGLUCURONIDE

A Systematic approach to chromatography
All components for complete systems
Pharmacia Fine Chemicals offers a wide range of compatible components for a variety of gel filtration and ion exchange chromatographic systems.

A COLUMNS. A comprehensive range of jacketed and unjacketed columns available in diameters from 0.9 to 21.5 cm. Lengths from 15 to 100 cm. Special solvent resistant columns also available in diameter 2.5 cm. Lengths 45 and 100 cm.

B FLOW ADAPTORS. Permit upward flow elution, sample application, recycling, flow reversal, etc.

C VALVES. 3- and 4-way valves allow easy operation and flexibility for sample application, recycling, flow reversal, by-pass, etc.

D RESERVOIRS. Bi-functional gel and eluant reservoirs for column packing and elution at constant pressure.

E CONNECTORS. 2- and 3-port connectors for capillary tubing allow easy interconnection of chromatographic components without flanging or flaring.

F FLOW CONTROL VALVE. Designed for shut-off as well as flow control.

NEW
Jacketed columns with new design. Diameters 1.6 and 2.6 cm (K16 and K26). Lengths 40, 70 and 100 cm. Special 1.6 x 20 cm column for ion exchange chromatography.
Flow adaptors for 1.6 and 2.6 cm columns (A 16 and A 26).
Flow control valve (FCV-1). Standard on 1.6 and 2.6 cm columns.
NEW OXOID electrophoresis strips are now so good, we just had to put a brand-new container round them.

New purer cellulose acetate permits—
※ more clearly defined separations
※ improved and permanent clearance of strips

New Oxoid electrophoresis strips are now—
※ interleaved for easier handling in a more practical container
※ available in a wider range of sizes

For further information, write to Oxoid Limited, Southwark Bridge Road, London SE1 9HF. Telephone 01-928 4515.

OXOID for progressive laboratories
A DNA polymerase from *Ehrlich* ascites tumor cells with preference for native DNA

K. HARM, H. HILZ and M.-M. OLDEKOP

Isolation and purification of a calcium-binding protein from human tissues

P. PIAZOLI, M. SCHLEYER and H. E. FRANZ

Bis(t-butyloxy carbonyl)insulin

Again our busy research workers bring you more new biochemicals

20 New enzymes
plus two enzyme inhibitors.

9 New Molecular Biologicals
plus 8D Cellulose.

4 New Substrates
plus 3 other new biochemicals

Combisets
Biochemical sets for standardisation and comparison.

Enzymes
β-amylase
L-arginase
Arylsulphatase
Bromelain
Carbonic Anhydrase
Carboxypeptidase-A
Carboxypeptidase-B
Deoxyribonuclease Grade 1
Deoxyribonuclease Grade 1;
EnzymoG - Papain
β-glucosidase
β-glucuronidase
Neuraminidase
Nuclease
Nucleoside-diphosphate kinase
Papain
Pepsin
Pepsinogen
Phosphatase alkaline
UDPG pyrophosphorylase

Enzyme Inhibitors
Trypsin inhibitor-soya bean
Trypsin inhibitor-egg white

New Substrates
Ethanolamine
β-glucose-6-phosphate
DL-3-Hydroxybutyrate
Succinyl-L-phenylalanine p-nitramide

Molecular Biologicals
HD Cellulose
Ribonucleic acid (soluble)

Nucleosides
2'-deoxy-adenosine
2'-deoxy-cytidine
2'-deoxy-guanosine
2'-deoxy-thymidine

Nucleotides
Deoxy thymidine-5'-diphosphate
Uridine-5'-diphospho-galactose
Poly A-C
Poly I-C
Xanthosine 3',5'-monophosphate cyclic

Combisets
Casein by Hampton
Calibration Protein set
Haemoglobin by Anson
Insulin Chain A
Insulin Chain B
Insulin Chains A & B

Other Biochemicals
Coenzyme A Grade II
Insulin Chain A
Insulin Chain B
