THE BIOCHEMICAL SOCIETY

OFFICERS AND COMMITTEE, 1972–73

Chairman of the Committee  
T. W. Goodwin, F.R.S.

Committee  
R. B. Beechey  
E. A. Dawes  
R. M. C. Dawson  
D. T. Elmore  
K. Griffiths  
R. Hofffenberg†  
G. D. Hunter  
V. H. T. James  
C. F. Mills  
C. A. Pasternak†  
P. J. Randle  
D. S. Robinson†  
T. A. Scott  
T. F. Slater  
Ruth E. van Heyningen  
D. G. Walker††  
A. M. White  
T. S. Work  
*Ex officio Member of Committee.  
†Representative of Editorial Board of the Biochemical Journal.  
‡Representative of Editorial Board of Clinical Science.  
Symposium Organizer  
R. M. S. Smellie

The Biochemical Society exists to advance the science of biochemistry through meetings and publications. Eleven meetings a year are held, each at a different place; original papers are presented and special topics are discussed at symposia and colloquia.

Persons interested in biochemistry are eligible for election as Members. Details of further facilities accorded to Members, and forms of application for membership, are available from the Executive Secretary, The Biochemical Society, 7 Warwick Court, London WC1R 5DP [01-242 1076 (4 lines)].

The Biochemical Journal is published and distributed by the Biochemical Society. It is published twice monthly, in four or more volumes per year. It is planned that five volumes will appear in 1972. The index for each volume is published separately.

Subscriptions to the Biochemical Journal. For non-members of the Biochemical Society the subscription to the Journal at the present rate of publication is £45 per year (£9 per volume). For non-members in the U.S.A. the subscription is $112 per year (subject to exchange variation) ($22.50 per volume). All subscriptions are payable in advance at the time of ordering. Orders and subscriptions should be sent to the Biochemical Society (Publications), P.O. Box 32, Commerce Way, Whitehall Road Industrial Estate, Colchester CO2 8HP, Essex.

Claims regarding issues lost or damaged in transit should be addressed to the Biochemical Society at the address in the preceding paragraph. No claims can be entertained if they are received later than three months after the date of posting of the Journal.

Back Numbers. Enquiries for volumes 1–9 should be addressed to William Dawson & Sons Ltd., Back Issues Department, Cannon House, Park Farm Road, Folkestone, Kent. Quotations for available issues of subsequent volumes and parts may be obtained on application to Walter J. Johnson Ltd., 24/28 Oval Road, London NW1 7DX, or to The Biochemical Society (Publications), P.O. Box 32, Commerce Way, Whitehall Road Industrial Estate, Colchester CO2 8HP, Essex.

Advertisements. Applications for advertising space should be sent to the Advertising Department, The Biochemical Society, 7 Warwick Court, London WC1R 5DP [01-242 1076 (4 lines)]. Copy is required eight weeks before publication date. Rate cards are available on request.

Microfilms. Volumes 1–89 (1906–1963) have been recorded on microfilm by the EP Group, Microfilm Division, Bradford Road, East Ardsley, Wakefield, Yorks. Details are available from the firm or the Biochemical Society.
The graphical determination of $K_m$ and $K_i$.
By M. Dixon

A reaction of glucose with peptides.
By H. B. F. Dixon

Biochemical heterogeneity of rat liver mitochondria separated by rate zonal centrifugation.
By M. A. Wilson & J. Cascarano

Short Communications

Observations on the sterol side-chain alkylation mechanism in a *Treobuxia* species.
By L. J. Goad, F. F. Knapp, J. R. Lenton & T. W. Goodwin

The polyamine content in two slow-growing rat hepatomas.
By E. Cavia & T. E. Webb

Index of Authors
Papers Accepted for Publication

The effects of amino acids on albumin synthesis and on the free and endoplasmic-reticulum-bound ribosomes of rat liver.
By L. Kelman, S. J. Saunders, S. Wicht, L. Frith, A. Corrigall, R. E. Kirsch & J. Terblanche

Microbial metabolism of alkylbenzenesulphonates. Bacterial metabolism of undecylbenzene-p-sulphonate and dodecylbenzene-p-sulphonate.
By A. J. Willetts & R. B. Heap

The primary structure of cytochrome c from the rust fungus Ustilago sphaerogena.
By K. G. Bitar, S. N. Vinogradov, C. Nolan, L. J. Weiss & E. Margoliash

Studies on the biosynthesis in vivo and excretion of 16-unsaturated C15 steroids in the boar.
By Y. A. Saat, D. B. Gower, F. A. Harrison & R. B. Heap

Mechanisms regulating adipose-tissue pyruvate dehydrogenase.
By B. R. Martin, R. M. Denton, H. T. Pask & P. J. Randle

The oxidation of nicotinic acid by Pseudomonas ovalis Chester. The terminal oxidase.
By M. V. Jones & D. E. Hughes

The kinetics of binding of oxygen and carbon monoxide to Gastrophilus haemoglobin.
By C. F. Phelps, E. Antonini, M. Brunori & G. Kellett

The binding of ribosomal subunits to endoplasmic-reticulum membranes.
By F. S. Rolleston

Studies of the denaturation and partial renaturation of ovalbumin.
By J. C. Holt & J. M. Creeth

Complete amino acid analysis of peptides and proteins after hydrolysis by a mixture of Sepharose-bound peptidases.
By H. P. J. Bennett, D. F. Elliott, B. E. Evans, P. J. Lowry & C. McMartin

Potassium ion-stimulated and sodium ion-dependent adenosine diphosphate-adenosine triphosphate exchange activity in kidney microsomal fraction.
By S. P. Banerjee & S. M. E. Wong

The acid and enzymic hydrolysis of O-acetylated sialic acid residues from rabbit Tamm–Horsfall glycoprotein.
By A. Neuberger & W. A. Ratcliffe

The conversion of orotic acid into uridine 5′-monophosphate by isolated perfused normal and regenerating rat livers.
By N. Fausto

Purine ribonucleotide biosynthesis, interconversion and catabolism in mouse brain in vitro.
By P. C. L. Wong & J. F. Henderson

Histone phosphatase and cyclic nucleotide-stimulated protein kinase from human lymphocytes.
By A. W. Murray, M. Froscio & B. E. Kemp

Phospholipid of the rat glomerular basement membrane in experimental nephrosis.
By K. K. Fung & N. Kalant

The fractionation of nuclei from brain by zonal centrifugation and a study of the ribonucleic acid polymerase activity in the various classes of nuclei.
By J. Austoker, D. Cox & A. P. Mathias

The enzymic conversion of linoleic acid into 9- (nona-1′,3′-dienoxy)non-8-enoic acid, a novel unsaturated ether derivative isolated from homogenates of Solanum tuberosum tubers.
By T. Galliard & D. R. Phillips

Purification and properties of D(-)-lactate dehydrogenase from potato tubers.
By D. D. Davies & S. Davies

A radiometric technique for measuring L-asparagine in picomole quantities.
By D. A. Cooney & H. A. Milman

The characterization of rat kidney plasma membranes prepared by zonal centrifugation.
By R. C. Price, D. G. Taylor & D. Robinson

The purification and characterization of wheat-germ agglutinin.
By D. Levine, M. J. Kaplan & P. J. Greenaway

Further studies on the stimulation of protein synthesis in androgen-dependent tissues by testosterone.
By W. I. P. Mainwaring & P. A. Wilce

Fractionation and isolation of the multiple forms of prorennin (prochymosin).
By N. Asato & A. G. Rand, Jr.

Biosynthesis of willardine and isowillardiine in germinating pea seeds and seedlings.
By T. S. Ashworth, E. G. Brown & F. M. Roberts

Interactions of insulin, corticosterone and prolactin in promoting milk-fat synthesis by mammary explants from pregnant rabbits.
Microsomal palmitoyl-coenzyme A synthetase from rat liver. Partial and exchange reactions.
By J. Bar-Tana, G. Rose & B. Shapiro

The metabolites of cyclohexylamine in man and certain animals.
By A. G. Renwick & R. T. Williams

The fate of cyclamate in man and other species.
By A. G. Renwick & R. T. Williams

The role of the gut flora in the metabolism of cyclamate.
By B. S. Drasar, A. G. Renwick & R. T. Williams
NOTES FOR CONTRIBUTORS

It is the policy of the *Biochemical Journal* to publish papers in English in all fields of biochemistry, provided that they make a sufficient contribution to biochemical knowledge. Papers may include new results obtained experimentally, descriptions of new experimental methods of biochemical importance, or new interpretations of existing results. All work presented should have as its aim the development of biochemical concepts rather than the mere recording of facts. Theoretical contributions will be considered equally with papers dealing with experimental work. Preliminary or inconclusive experiments should not generally be described.

Two types of paper are accepted by the editors: Full-length papers. Papers submitted for publication should be sent together with an extra copy of the synopsis (see below) to the Editorial Secretary, The Biochemical Journal, 7 Warwick Court, London WC1R 5DP. Typescripts should bear the name and address of the person to whom the proof of the paper is to be sent.

Papers submitted should be written concisely. Special attention is directed to the sections below concerning the preparation of the typescript. Typescripts that are not concise or do not conform to the conventions of the *Biochemical Journal* will be returned to the authors for revision. If a paper that has been returned to an author for revision is not resubmitted within one month, it will, on resubmission, be deemed to be a new paper and the date of receipt altered accordingly. A revised paper containing a significant amount of new material will also be redated.

Submission of a paper to the Editorial Board implies that it reports unpublished work, that it is not under consideration for publication elsewhere, and that if accepted for the *Biochemical Journal* it will not be published elsewhere in the same form, either in English or in any other language, without the consent of the Editorial Board.

Papers should be headed by a concise but informative full title, by the names of the authors (preferably with one forename in full for each author) and by the name and address of the establishment where the work was performed. Details of financial support appear in the acknowledgements at the end of the paper.

Before preparing papers authors should consult a current issue of the Journal to make themselves familiar with the general format, such as the use of cross-headings, lay-out of tables and citation of references. Papers should be in double-spaced typing throughout (including the references and legends of tables and figures) on sheets of uniform size and wide margins. The top copy should be submitted. It cannot be overemphasized that the need for revision of badly prepared typescripts inevitably leads to delays in publication.

Papers on specialized subjects should be presented so that they are intelligible to the ordinary reader of the Journal. Sufficient information must be included to permit repetition of the experimental work.

Short Communications. Typescripts should be submitted in duplicate, written in English, and conform strictly to the form of the Journal as far as spelling and abbreviations are concerned. Such communications should not exceed 2400 words in length inclusive of the title, references etc. Authors may include up to two insertions such as tables, figures or schemes; in these cases authors must assess what proportion of a page these insertions will occupy and reduce the number of text words accordingly at the rate of 700 words per full page of the Journal. Authors are advised that the preparation of tables and especially figures is liable to cause a slight increase in publication time. Under no circumstances whatsoever can a complete Short Communication occupy more than four pages of the Journal. Communications should be addressed to the Editorial Secretary, The Biochemical Journal, 7 Warwick Court, London WC1R 5DP. Papers should be complete in themselves; (1) the methods used in experimental work must be adequately described or sufficient references given to allow repetition of the work; (2) sufficient indication of the results of experimental work must be included to justify the claims made.
