A. M. White
T. S. Work

*Ex officio Member of Committee.
†Representative of Editorial Board of the Biochemical Journal.

Executive Secretary
A. I. P. Henton (7 Warwick Court, London WC1R 5DP)

The Biochemical Society exists to advance the science of biochemistry through meetings and publications. Eleven meetings a year are held, each at a different place; original papers are presented and special topics are discussed at symposia and colloquia.

Persons interested in biochemistry are eligible for election as Members. Details of further facilities accorded to Members, and forms of application for membership, are available from the Executive Secretary, The Biochemical Society, 7 Warwick Court, London WC1R 5DP [01-242 1076 (4 lines)].
The Biochemical Journal is published and distributed by the Biochemical Society. It is published twice monthly, alternate issues being devoted to Molecular Aspects and to Cellular Aspects of biochemistry. It is planned that in 1973 six volumes, each volume being made up of four issues, will be published according to the following schedule:

<table>
<thead>
<tr>
<th>Molecular Aspects</th>

Biochemical Society Transactions is a new publication commencing January 1973. It includes extended abstracts of communications (including reports on colloquia and the text of Special Lectures) presented at meetings of the Biochemical Society, book reviews etc. (Note: the Proceedings of the Biochemical Society ceased publication in the Biochemical Journal at the end of 1972.) In 1973 it is planned that one volume, composed of six issues, will be published.

Biochemical Society Transactions is issued free to all subscribers of the Biochemical Journal only: it is not available on a separate subscription.

Subscriptions to the Biochemical Journal and Biochemical Society Transactions. For non-members of the Biochemical Society the subscription in 1973 for the Journal (plus Transactions) is £70 per year. For non-members in the U.S.A. the subscription is $180 per year (subject to exchange variation). Terms are cash with order or against proforma invoice. Orders and subscriptions should be sent to the Biochemical Society (Publications), P.O. Box 32, Commerce Way, Whitehall Road Industrial Estate, Colchester CO2 8HP, Essex, or through your normal agent.

Claims regarding issues lost or damaged in transit should be addressed to the Biochemical Society at the address given in the preceding paragraph. Claims cannot be entertained if they are received later than three months after the date of posting.

Back Numbers. Enquiries for volumes 1–19 of the Journal should be addressed to William Dawson & Sons Ltd., Back Issues Department, Cannon House, Park Farm Road, Folkestone, Kent. Quotations for available issues of subsequent volumes and parts of the Journal, and also of Transactions, may be obtained on application to The Biochemical Society (Publications), P.O. Box 32, Commerce Way, Whitehall Road Industrial Estate, Colchester CO2 8HP, Essex.

Advertisements. Applications for advertising space should be sent to the Advertising Department, The Biochemical Society, 7 Warwick Court, London WC1R 5DP [01-242 1076 (4 lines)]. Copy is required eight weeks before publication date. Rate cards are available on request.

Microfilms. Volumes 1–89 (1906–1963) of the Journal have been recorded on microfilm by the EP Group, Microfilm Division, Bradford Road, East Ardsley, Wakefield, Yorks. Details are available from them or the Biochemical Society.

Papers Accepted for Publication

Protein synthesis and loss of viability in rye embryos. The lability of transferase enzymes during senescence.  
By B. E. Roberts & D. J. Osbourne

Biosynthetic studies on aromatic carotenoids. Biosynthesis of chlorobactene.  
By S. E. Moshier & D. J. Chapman

Collagen cross-linking. Isolation of cross-linked peptides from collagen from chicken bones.  
By D. R. Eyre & M. J. Glimcher

The interrelationship of pH, bicarbonate, pCO₂ and calcium in the regulation of renal gluconeogenesis in the rat.  
By G. A. O. Alleyne, H. Flores & A. Roobol

A spectrophotometric study of the secondary structure of precursor ribosomal ribonucleic acid from Krebs ascites-tumour cells.  
By A. A. Hadjiolov & R. A. Cox

The formation of choline O-sulphate by Pseudomonas C₁₂B and other Pseudomonas species.  
By J. W. Fitzgerald

The transporting proteins of cholecalciferol and 25-hydroxycholecalciferol in serum of chicks and other species. Partial purification and characterization of the chick proteins.  
By S. Edelstein, D. E. M. Lawson & E. Kodicke

Cellular reactions of O₆-methylguanine, a product of some alkylating carcinogens.  
By C. T. Miller, P. D. Lawley & S. A. Shah

Microbiological transformations of steroids. 1-Dehydrogenation of 17,21-dihydroxypregn-4-ene-3,20-dione with Glomerella cingulata.  
By L. Costa Pla

Clearing-factor lipase in muscle and adipose tissue of pigs.  
By M. Enser

Influence of mitochondria on phospholipid synthesis in preparations from rat liver.  
By J. B. Roberts & F. L. Bygrave

The turnover rate of rabbit urinary Tamm–Horsfall glycoprotein.  
By A. M. S. Grant & A. Neuberger

Carotenoid biosynthesis in Rhodopseudomonas spheroides. S-Adenosylmethionine as the methylating agent in the biosynthesis of spheroidene and spheroidenone.  
By R. K. Singh, G. Britton & T. W. Goodwin

Control of 5-aminolaevulinate synthetase activity in Rhodopseudomonas spheroides. The involvement of sulphur metabolism.  
By A. Neuberger, J. D. Sandy & G. H. Tait

Control of 5-aminolaevulinate synthetase activity in Rhodopseudomonas spheroides. The purification and properties of an endogenous activator of the enzyme.  
By A. Neuberger, J. D. Sandy & G. H. Tait

Thymidine metabolism in regenerating rat liver one to two hours after partial hepatectomy.  
By M. G. Ord & L. A. Stocken

The tritium isotope effect of sn-glycerol 3-phosphate oxidase and the effects of clofenapate and N-(2-benzoyloxyethyl)norfenfuramine on the esterification of glycerol phosphate and dihydroxyacetone phosphate by rat liver mitochondria.  
By M. Bowley, R. Manning & D. N. Brindley

Plasma lipoproteins and the synthesis and turnover of plasma triglyceride in normal and genetically obese mice.  
By D. M. W. Salmon & D. A. Hems

The sterols of the echinoderm Asterias rubens.  
By A. G. Smith, I. Rubinstein & L. J. Goad

S-Adenosyl-L-methionine–cycloartenol methyltransferase activity in cell-free systems from Trebouxia sp. and Scenedesmus obliquus.  
By Z. A. Wojciechowski, L. J. Goad & T. W. Goodwin

The isolation and partial characterization of ribonuclease A from Bison bison.  
By G. R. Stewart & K. J. Stevenson

Effects of clofibrate on the metabolism of progesterone and oestradiol in rat liver microsomal fraction.  
By K. Einarsson, J.-Å. Gustafsson & K. Hellström

Molecular weight and amino acid composition of the exocellular ω-carboxypeptidase–transpeptidase of Streptomyces R61.  
By J.-M. Frère, J.-M. Ghuysen, H. R. Perkins & M. Nieto
Enzymic mechanisms involving concomitant transfer and hydrolysis reactions.

By J.-M. Frère

Kinetics of concomitant transfer and hydrolysis reactions catalysed by the exocellular dD-carboxypeptidase–transpeptidase of *Streptomyces R61*.

By J.-M. Frère, J.-M. Ghuysen, H. R. Perkins & M. Nieto

Fluorescence and circular-dichroism studies on the *Streptomyces R61* DD-carboxypeptidase–transpeptidase. Penicillin binding by the enzyme.

Dietary protein intake and skeletal-muscle protein metabolism in rats. Studies with the ammonium chloride-wash fraction from crude polyribosomes of well-nourished and protein-depleted rats.

By S. D. Alexis & V. R. Young

Relationships between concentration of hepatic intermediary metabolites and induction of the key glycolytic enzymes *in vitro*.

By J. M. Gunn & C. B. Taylor

Characterization of the proteins of guinea-pig hair and hair-follicle tissue.

By P. M. Steinert & G. E. Rogers

Biosynthesis of immunoglobulin A (IgA). Secretion and addition of carbohydrate to monomer and polymer forms of a mouse myeloma protein.

By E. Della Corte & R. M. E. Parkhouse

Biosynthesis of immunoglobulin A (IgA) and immunoglobulin M (IgM). Requirements for J chain and a disulphide-exchanging enzyme for polymerization.

By E. Della Corte & R. M. E. Parkhouse

Biosynthesis of immunoglobulin A (IgA) and immunoglobulin M (IgM). Control of polymerization by J chain.

By R. M. E. Parkhouse & E. Della Corte

Functional groups in the activity and regulation of *Escherichia coli* citrate synthase.

By M. J. Danson & P. D. J. Weitzman

Ribosome precursors accumulated by *Escherichia coli* during incubation with cobalt chloride.

By M. R. Blundell & D. G. Wild

Nitrogenase of *Klebsiella pneumoniae*. Interaction of the component proteins studied by ultracentrifugation.

By R. R. Eady

N-Acetyl-β-d-hexosaminidase component A. Different forms in human tissues and fluids.

By J. U. Ikonne & R. B. Ellis

Synthesis and degradation of mitochondrial components in hypertrophied rat heart.

By R. Albin, R. T. Dowell, R. Zak & M. Rabinowitz

The molecular-weight distribution of glycosaminoglycans.

By J. J. Hopwood & H. C. Robinson

Use of progress curves to investigate product inhibition in enzyme-catalysed reactions. Application to the soluble mitochondrial adenosine triphosphatase.

By R. D. Philo & M. J. Selwyn

Phosphatidylinositol kinase. A component of the chromaffin-granule membrane.

By J. H. Phillips

Quantitative studies on ferredoxin in greening bean leaves.

By B. G. Haslett, R. Cammack & F. R. Whatley

A new general method for the assessment of the molecular-weight distribution of polydisperse preparations. Its application to an intestinal epithelial glycoprotein and two dextran samples, and comparison with a monodisperse glycoprotein.

By R. A. Gibbons, S. N. Dixon & D. H. Pocock

Ethanol administration and the relationship of malonyl-coenzyme A concentrations to the rate of fatty acid synthesis in rat liver.

Qualitative determination of N-terminal amino acids of peptides and proteins with cobalt(III) chelates.

By K. W. Bentley & E. H. Creaser

Vitamin A economy of the developing chick embryo and of the freshly hatched chicks.

By P. S. Joshi, S. N. Mathur, S. K. Murthy & J. Ganguly

The subcellular distribution and properties of aldehyde dehydrogenase in rat liver.

By S. O. C. Tottmar, H. Pettersson & K.-H. Kiessling
NOTES FOR CONTRIBUTORS

It is the policy of the Biochemical Journal to publish papers in English in all fields of biochemistry, provided that they make a sufficient contribution to biochemical knowledge. Papers may include new results obtained experimentally, descriptions of new experimental methods of biochemical importance, or new interpretations of existing results. Theoretical contributions will be considered equally with papers dealing with experimental work. All work presented should have as its aim the development of biochemical concepts rather than the mere recording of facts. Preliminary or inconclusive experiments should not generally be described.

Two types of paper are accepted by the editors: Full-length papers. Papers submitted for publication should be sent together with an extra copy of the synopsis (see below) to the Editorial Secretary, The Biochemical Journal, 7 Warwick Court, London WC1R 5DP. Typescripts should bear the name and address of the person to whom the proof of the paper is to be sent.

Papers submitted should be written concisely. Special attention is directed to the sections below concerning the preparation of the typescript. Typescripts that are not concise or do not conform to the conventions of the Biochemical Journal will be returned to the authors for revision. If a paper that has been returned to an author for revision is not resubmitted within one month, it will, on resubmission, be deemed to be a new paper and the date of receipt altered accordingly. A revised paper containing a significant amount of new material will also be redated.

Submission of a paper to the Editorial Board implies that it reports unpublished work, that it is not under consideration for publication elsewhere, and that if accepted for the Biochemical Journal it will not be published elsewhere in the same form, either in English or in any other language, without the consent of the Editorial Board.

Papers should be headed by a concise but informative full title, by the names of the authors (preferably with one forename in full for each author) and by the name and address of the establishment where the work was performed. Details of financial support appear in the acknowledgements at the end of the paper.

Before preparing papers authors should consult a current issue of the Journal to make themselves familiar with the general format, such as the use of cross-headings, lay-out of tables and citation of references. Papers should be in double-spaced typing throughout (including the references and legends of tables and figures) on sheets of uniform size and wide margins. The top copy should be submitted. It cannot be overemphasized that the need for revision of badly prepared typescripts inevitably leads to delays in publication.

Papers on specialized subjects should be presented so that they are intelligible to the ordinary reader of the Journal. Sufficient information must be included to permit repetition of the experimental work.

Short Communications. Typescripts should be submitted in duplicate, written in English, and conform strictly to the form of the Journal as far as spelling and abbreviations are concerned. Each Short Communication should be provided with a short synopsis (normally not exceeding 50 words). Such communications should not exceed 2400 words in length inclusive of the title, references etc. Authors may include up to two insertions such as tables, figures or schemes; in these cases authors must assess what proportion of a page these insertions will occupy and reduce the number of text words accordingly at the rate of 700 words per full page of the Journal. Authors are advised that the preparation of tables and especially figures is liable to cause a slight increase in publication time. Under no circumstances whatsoever can a complete Short Communication occupy more than four pages of the Journal. Communications should be addressed to the Editorial Secretary, The Biochemical Journal, 7 Warwick Court, London WC1R 5DP. Papers should be complete in themselves; (1) the methods used in experimental work must be adequately described or sufficient references given to allow repetition of the work; (2) sufficient indication of the results of experimental work must be included to justify the claims made.
