*Ex officio Member of Committee.
†Representative of Editorial Board of the Biochemical Journal.

Executive Secretary
A. I. P. Henton (7 Warwick Court, London WC1R 5DP)

The Biochemical Society exists to advance the science of biochemistry through meetings and publications. Eleven meetings a year are held, each at a different place; original papers are presented and special topics are discussed at symposia and colloquia.

Persons interested in biochemistry are eligible for election as Members. Details of further facilities accorded to Members, and forms of application for membership, are available from the Executive Secretary, The Biochemical Society, 7 Warwick Court, London WC1R 5DP [01-242 1076 (4 lines)].
The Biochemical Journal is published and distributed by the Biochemical Society. It is published twice monthly, alternate issues being devoted to Molecular Aspects and to Cellular Aspects of biochemistry. It is planned that in 1973 six volumes, each volume being made up of four issues, will be published according to the following schedule:

<table>
<thead>

Biochemical Society Transactions is a new publication commencing January 1973. It includes extended abstracts of communications (including reports on colloquia and the text of Special Lectures) presented at meetings of the Biochemical Society, book reviews etc. (Note: the Proceedings of the Biochemical Society ceased publication in the Biochemical Journal at the end of 1972.) In 1973 it is planned that one volume, composed of six issues, will be published.

Biochemical Society Transactions is issued free to all subscribers of the Biochemical Journal only: it is not available on a separate subscription during 1973. From January 1974 it will become a separate publication.

Subscriptions to the Biochemical Journal and Biochemical Society Transactions. For non-members of the Biochemical Society the subscription in 1973 for the Journal (plus Transactions) is £70 per year. For non-members in the U.S.A. the subscription is $180 per year (subject to exchange variation). Terms are cash with order or against proforma invoice. Orders and subscriptions should be sent to the Biochemical Society (Publications), P.O. Box 32, Commerce Way, Whitehall Road Industrial Estate, Colchester CO2 8HP, Essex, or through your normal agent.

Claims regarding issues lost or damaged in transit should be addressed to the Biochemical Society at the address given in the preceding paragraph. Claims cannot be entertained if they are received later than three months after the date of posting.

Back Numbers. Enquiries for volumes 1–19 of the Journal should be addressed to William Dawson & Sons Ltd., Back Issues Department, Cannon House, Park Farm Road, Folkestone, Kent. Quotations for available issues of subsequent volumes and parts of the Journal, and also of Transactions, may be obtained on application to The Biochemical Society (Publications), P.O. Box 32, Commerce Way, Whitehall Road Industrial Estate, Colchester CO2 8HP, Essex.

Microfilms. Volumes 1–89 (1906–1963) of the Journal have been recorded on microfilm. Details are available from the Biochemical Society’s Colchester office.

Advertisements. Applications for advertising space should be sent to the Advertising Department, The Biochemical Society, 7 Warwick Court, London WC1R 5DP [01-242 1076 (4 lines)]. Copy is required eight weeks before publication date. Rate cards are available on request.

Papers Accepted for Publication

By I. P.ull & H. McIlwain

Chloride-dependent uncoupling mediated by oligomycin in rat liver mitochondria.
By N. Ariel & Y. Avi-Dor

The mechanism of the reaction between glutathione and 1-menaphthyl sulphate catalysed by a glutathione S-transferase from rat liver.
By B. Gillham

Immunochernical characterization of proteins from mouse liver plasma membranes.
By J. W. Gurd, W. H. Evans & H. R. Perkins

Purification and properties of rabbit muscle L-glycerol 3-phosphate dehydrogenase.
By P. Bentley, M. F. Dickinson & I. G. Jones

The diurnal response of muscle and liver protein synthesis in vivo in meal-fed rats.
By P. J. Garlick, D. J. Millward and W. P. T. James

The molecular weight of J chains derived from human immunoglobulin M.
By M. J. Ricardo, Jr., J. M. Brewer & F. P. Inman

Nucleotide sequence analyses of the cytoplasmic 5S ribosomal ribonucleic acid from five species of flowering plants.
By P. I. Payne, M. J. Corry & T. A. Dyer

Effects of membrane depolarization on nicotinamide nucleotide fluorescence in brain slices.
By P. Lipton

The amino acid sequence of cytochrome c' from Alcaligenes sp. N.C.I.B. 11015.
By R. P. Ambler

The reaction pathway of membrane-bound rat liver mitochondrial monoamine oxidase.
By M. D. Houslay & K. F. Tipton

Oxalacetate decarboxylases of rat liver.
By B. Dean & W. Bartley

Aromatic amino acid transaminase in rat intestine.
By J. Nakamura, T. Noguchi & R. Kido

Isoenzyme patterns in parenchymal and non-parenchymal cells isolated from regenerating and regenerated liver.
By R. J. Bonney, P. Walker & V. R. Potter

The interaction of 3-deoxy-3-fluoro-D-glucose with the hexose-transport system of the human erythrocyte.
By G. J. Riley & N. F. Taylor

Synthesis of mitochondrial protein in the flight muscles of the Colorado beetle. Differentiation in vivo between extra- and intra-mitochondrial contributions to the amino acid incorporation into mitochondrial protein.
By A. K. M. Bartelink & C. A. F. de Kort

Electrokinetic properties of isolated cerebral-cortex synaptic vesicles.
By J. McLaughlin, K. R. Case & B. Bosmann

Chloroplast ribosomal-ribonucleic acid synthesis in cultured spinach leaf tissue.
By P. Detchon & J. V. Possingham

The control of synthesis of bacterial cell walls. Interaction in the synthesis of nucleotide precursors.

The biosynthesis of plasmodial myosin during starvation of Physarum polycephalum.
By H. F. White & J. Lascelles

The reliability of Michaelis constants and maximum velocities estimated by using the integrated Michaelis-Menten equation.
By G. L. Atkins & I. A. Nimmo

Purification and some properties of cytoplasmic aspartate aminotransferase from sheep liver.
By M. Campos-Cavieres & E. A. Munn

Collagen cross-links. A mass-spectrometric and 1H and 13C nuclear-magnetic-resonance study.
By E. Hunt & H. R. Morris

Conformation of the mucopolysaccharides. X-ray fibre diffraction of heparin.
By I. A. Nieduszynski & E. D. T. Atkins

The role of protein kinase activation in the control of steroidogenesis by adrenocorticotropic hormone in the adrenal cortex.
By M. C. Richardson & D. Schulster

Biosynthesis of respiratory-tract mucins. Incorporation of radioactive precursors into glycoproteins by canine tracheal explants in vitro.
By D. B. Ellis & G. H. Stahl

By G. H. Stahl & D. B. Ellis
Molecular weight as a factor in the excretion of mono-quaternary ammonium cations in the bile of the rat, rabbit and guinea pig.

By R. D. Hughes, P. Millburn & R. T. Williams

Biliary excretion of some diquaternary ammonium cations in the rat, guinea pig and rabbit.

By R. D. Hughes, P. Millburn & R. T. Williams

Identification of flavanone metabolites in rat urine by combined gas chromatography and mass spectrometry.

By N. P. Das, K. N. Scott & J. H. Duncan

The formation of ferritin from apoferritin. Inhibition and metal ion-binding studies.

By I. G. Macara, T. G. Hoy & P. M. Harrison

Some characteristics of the coagulation factor Xa purified from human serum.

By A. G. Berre, B. Østerud, T. B. Christensen, T. B. Holm & H. Prydz

Isolation and characterization of a glycoprotein from human colostrum.

By J. H. Nichols & A. Bezkorovainy

Association of nascent polypeptide with 30S ribosomal subunits.

By M. Cannon, M. A. A. Mirza & M. L. M. Anderson

Association of nascent polypeptide and transfer ribonucleic acid with 30S ribosomal subunits.

By M. A. A. Mirza, M. Cannon & M. L. M. Anderson

The metabolism of benzene by bacteria.

By B. C. Axcell & P. J. Geary

The thermal denaturation of human oxyhaemoglobin A, A2, C and S.

By J. Kinderlerer, H. Lehmann & K. F. Tipton

Purification and properties of a mouse liver plasma-membrane glycoprotein hydrolysing nucleotide pyrophosphate and phosphodiester bonds.

By W. H. Evans, D. O. Hood & J. W. Gurd

Guanine deaminase inhibitor from rat liver. Isolation and characterization.

By S. S. Ali, K. Sree Kumar & P. S. Krishnan

Studies on selenium incorporation into, and electron-transfer function of, liver microsomal fractions from normal and vitamin E-deficient rats given phenobarbitalone.

By C. P. J. Caygill, A. T. Diplock & E. H. Jeffery

Inhibition of enzymes by metal ion-chelating reagents. Theory and new graphical methods of study.

By W. G. Bardsley & R. E. Childs

Inhibition of enzymes by metal ion-chelating reagents. The action of copper-chelating reagents on diamine oxidase.

By W. G. Bardsley, R. E. Childs & M. J. Crabbe

The reconstitution of oxidase activity in membranes derived from a 5-aminolaevulinic acid-requiring mutant of Escherichia coli.

By B. A. Haddock

3-Hydroxy steroid dehydrogenase activities of cortisone reductase.

By W. Gibb & J. Jeffery

Polymerization of proteins with glutaraldehyde. Soluble molecular-weight markers.

By J. W. Payne
NOTES FOR CONTRIBUTORS

It is the policy of the Biochemical Journal to publish papers in English in all fields of biochemistry, provided that they make a sufficient contribution to biochemical knowledge. Papers may include new results obtained experimentally, descriptions of new experimental methods of biochemical importance, or new interpretations of existing results. Theoretical contributions will be considered equally with papers dealing with experimental work. All work presented should have as its aim the development of biochemical concepts rather than the mere recording of facts. Preliminary or inconclusive experiments should not generally be described.

Two types of paper are accepted by the editors: Full-length papers. Papers submitted for publication should be sent together with an extra copy of the synopsis (see below) to the Editorial Secretary, The Biochemical Journal, 7 Warwick Court, London WC1R 5DP. Typescripts should bear the name and address of the person to whom the proof of the paper is to be sent.

Papers submitted should be written concisely. Special attention is directed to the sections below concerning the preparation of the typescript. Typescripts that are not concise or do not conform to the conventions of the Biochemical Journal will be returned to the authors for revision. If a paper that has been returned to an author for revision is not resubmitted within one month, it will, on resubmission, be deemed to be a new paper and the date of receipt altered accordingly. A revised paper containing a significant amount of new material will also be redated.

Submission of a paper to the Editorial Board implies that it reports unpublished work, that it is not under consideration for publication elsewhere, and that if accepted for the Biochemical Journal it will not be published elsewhere in the same form, either in English or in any other language, without the consent of the Editorial Board.

Papers should be headed by a concise but informative full title, by the names of the authors (preferably with one forename in full for each author) and by the name and address of the establishment where the work was performed. Details of financial support appear in the acknowledgements at the end of the paper.

Before preparing papers authors should consult a current issue of the Journal to make themselves familiar with the general format, such as the use of cross-headings, lay-out of tables and citation of references. Papers should be in double-spaced typing throughout (including the references and legends of tables and figures) on sheets of uniform size and wide margins. The top copy should be submitted. It cannot be overemphasized that the need for revision of badly prepared typescripts inevitably leads to delays in publication.

Papers on specialized subjects should be presented so that they are intelligible to the ordinary reader of the Journal. Sufficient information must be included to permit repetition of the experimental work.

Short Communications. Typescripts should be submitted in duplicate, written in English, and conform strictly to the form of the Journal as far as spelling and abbreviations are concerned. Each Short Communication should be provided with a short synopsis (normally not exceeding 50 words). Such communications should not exceed 2400 words in length inclusive of the title, references etc. Authors may include up to two insertions such as tables, figures or schemes; in these cases authors must assess what proportion of a page these insertions will occupy and reduce the number of text words accordingly at the rate of 700 words per full page of the Journal. Authors are advised that the preparation of tables and especially figures is liable to cause a slight increase in publication time. Under no circumstances whatsoever can a complete Short Communication occupy more than four pages of the Journal. Communications should be addressed to the Editorial Secretary, The Biochemical Journal, 7 Warwick Court, London WC1R 5DP. Papers should be complete in themselves; (1) the methods used in experimental work must be adequately described or sufficient references given to allow repetition of the work; (2) sufficient indication of the results of experimental work must be included to justify the claims made.
