We speak English, French, Chinese, Hebrew and Swahili, but mostly we speak Immunochemicals, and that is the language we speak best.

Does it seem strange that our goats graze the hills leading to Jerusalem and yet if we don't leave the rabbit houses before 4:30 p.m., we get caught in the five o'clock rush back to the lab in Kankakee? Strange, perhaps, but our animals are certainly productive! Jointly, Miles-Yeda, Rehovot, Israel, and Miles Research Division, Kankakee, Illinois, produce over 150 different antisera, immunodiffusion plates, immunochemical kits and immunoadsorbents.

We find our international environment stimulating, too. Our involvement with the Weizmann Institute of Science (we are right on the campus) plus the technological advances made at our Kankakee labs provide insight and background to produce the products you need.

We invite your questions, comments or suggestions. Again, we don't care what the accent is—if you speak Immunochemicals, we will understand you.

Reach us by phone in the U.S.A. at 815 939-4417, or in Israel at 03 95-29-22, or by letter through any of our offices listed.

THE BIOCHEMICAL JOURNAL

LIPID ANALYSIS

William W Christie

Hannah Research Institute, Ayr

352 pages 53 illustrations
October 1973 £8.00 hard cover

This book critically examines the literature and brings together in a systematic manner the best of the procedures that have been developed for separating, identifying and determining lipid classes and their component parts.

Newcomers will find this book a useful guide through the potential complexities of lipid analysis, and experts in the field will find it a valuable reference work.

Automated Analysis of Drugs
and Other Substances of Pharmaceutical Interest
Edited by C. T. Rhodes, BPharm, PhD, FRIC, MPS
and R. E. Hone, BPharm, MPS

The editors of this book are convinced that the development and use of automation in the field of quantitative drug analysis is inevitable in the very near future. The twelve contributors are experienced research scientists; their practical advice will consequently be of special value to scientists considering conversion from manual to automated methods.

1973 300 pp., illustrated 0 407 11151 4 case £5.95
0 407 11150 6 limp £3.95

Drugs in Anaesthetic Practice
4th Edition
F. G. Wood-Smith, MA, MB(Cantab), FFARCS;
M. D. Vickers, MB, BS(Lond), FFARCS; and
H. C. Stewart, MA, MD(Cantab), PhD(Lond), FRCP, FFARCS

This is the only medium-sized book which covers the whole of this subject and gives not only the theoretical background and science, but also actual practical help on specific drugs and therapeutic problems. It has been thoroughly revised, and some sections have been completely rewritten. The major part of the book deals with various classes and groups of drugs, and a complete grounding in basic physical chemistry and physiological regulation is included.

1973 650 pp., illustrated 0 407 15502 3 £6.50

DNA Polymerase I
(EC 2.7.7.7)

Boehringer Mannheim have DNA Polymerase I that you can rely upon in every way. For convenience of use the enzyme is supplied in 50% glycerol in a polypropylene vial that can be kept happily at —20°C during shipment and storage.

Our Grade I preparation with a specific activity of 2500—5000 U/mg1 corresponds to stage 7 of the Jovin et al. preparation2. Before it leaves our Research Laboratories in Tutzing it undergoes exacting quality control procedures including SDS disc-electrophoresis which shows just one heavy and a few very faint bands.

A fragment of the DNA Polymerase I enzyme—Enzyme A according to Klenow3 is the latest addition to our range. It has a molecular weight of only 75,000, as opposed to 109,000 for the DNA Polymerase I, due to the removal by proteolytic activity of the 5'→3' Exonuclease.

References

DNA Polymerase is no exception to the Boehringer Mannheim dictum ‘that for each enzyme its own substrate, co-factor and inhibitor is supplied’. Examples from the range of complimentary biochemicals available for DNA Polymerase I are deoxyribonucleoside 5'-triphosphates including 5'-bromo dUTP, Nalidixic acid and Poly(dG-dC)—Analytical specifications and applications for these and the complete range of our biochemicals for Molecular Biology and Structural Studies are in these illustrated brochures.

Pharmacia Peristaltic Pump P-3

A cassette pump electronically controlled for constant liquid flows in chromatography and gradient formation

You can

- obtain three different flow rates at the same time through the three individually tensioned pumping channels
- change tubes in seconds with the snap-in cassette
- forget about pulsation thanks to the large driven rollers
- rely on a constant motor speed, electronically compensated for load and temperature
- use any flow rate between 0.6 and 400 ml/h per channel with the same gear box
- reverse the flow instantly
- push for maximum flow and clear pump lines rapidly
Ideas that cannot wait

Since publishing our first Handbook of Biochemicals, we have added many new and interesting biochemicals, some of which are too exciting to await our second handbook.
