World--
See
SIGMA'S

Most of our competitors are spending a lot of money on beautiful full-color ads. They are trying hard to attract your attention—not by telling you about a superior product, but by showing you a pretty picture of a box—or a bottle. Sometimes they take advantage of the "prurient interest" of the males in the audience with a pretty picture of a pretty girl (Women's Libbers note!) We admit that there are times when we would rather look at a pretty girl than at a box, but we hardly think that one is a substitute for the other, and neither replaces a superior reagent, especially if you are looking for the superior reagent.

Sigma doesn't resort to such ruses. Sigma doesn't have to.

We don't sell pretty boxes, bottles, or ads.
We just sell SUPERIOR (We think) Reagents.

We don't have to sell you. You already know that if it comes from Sigma, it is darn dependable. When we advertise (which isn't very often), we simply want to tell you about something we have developed. Our ads must be informative. Sigma ads are easy to spot because they are so plain and UGLY—but they say something that might be helpful to you in your work. If we don't have something to say, we don't advertise. In fact, for over a quarter of a century, you have kept us so busy filling your orders, we hardly have time to write the ads which would tell you about the new things we have. Practically without advertising, Sigma-International sales are running substantially above last year's. To maintain our reputation for fabulous service in the face of this avalanche of orders, we are constantly building new facilities, training hundreds of people, and using the most sophisticated computerized order-control routine in the world.

Sigma is modern proof of the old saying:

"If you build a better mouse trap,
the world will beat a path to your door."

It still works.

It's a Pleasure Doing Business With Sigma!
Success for the competitive yachtsman must in some part depend upon the quality and reliability of the equipment he uses.

Likewise for you, the researcher, these virtues must apply to your reagents for them to contribute to your success.

To broaden your Biochemical Research 'horizon' Boehringer Mannheim offer the following new preparations.

Reverse transcriptase (AMV) Cat.No. 15644 (RNA-dependent DNA-polymerase)
Purified by chromatography on DEAE-cellulose, phosphocellulose and Sephadex® G-100.
Supplied at 20°C in 50% glycerol; 1M dithiothreitol and 0.3M potassium phosphate; pH approx. 8.0. Stabilised with bovine serum albumin (0.5mg/ml).
With oligo-dT stimulated AMV-RNA the enzyme preparation performs well.

2'-O-Succinyl-A 3:5-MP  Cat.No. 15629
Introduced to satisfy the growing demand for an ultra-sensitive radio-immuno assay for A 3:5-MP.
Techniques currently being developed make it possible to measure A 3:5-MP in the pM range with antibodies produced from Succinyl A 3:5-MP linked to albumin.

Phospholipase C  Cat.No. 15636
from Bacillus cereus  E.C. 3.1.4.3.
When elucidating the type and arrangement of membrane phospholipid structures in erythrocytes the enzyme from B. cereus has the advantage over other sources of being free from proteases, hydrolases neuraminidase and has negligible haemolytic activity.
References: J.H.HOACH et al., Biotechnol. and Bioeng. XV, 551 (1973)

Adenosine 5'-O-(3-thiotriphosphate) (ATP'TP)  Cat.No. 15623
The latest in a line of nucleotide analogues of particular interest to anybody working on ATP-dependent enzyme systems. Supplied as tetra- lithium salt to facilitate precipitation combined with stability.
Typical analysis: ATP > 98.5%  NaCl < 0.15%
Application: Inhibition of nucleases and ATPases; inhibition of muscle myosin, affinity for cell membranes, labelling enzymes, structural analysis, diplopolymerase, microscopy. (ATP is a standard for all enzyme assays.)
Biochemistry 18, 155-161 (1979)

Cholesterol oxidase  from Bacillus cereus
Specific activity: approx. 450000 units/mg protein
Of particular interest to food and medical researchers in lipid investigation.

Contents

NADP-specific glutamate dehydrogenase from Plasmodium chabaudi
R. D. Walter, J.-P. Nordmeyer and E. König

Hydroxysteroid oxidoreductases and their role in the catalysis of the specific transfer of hydrogen between steroid hormones in human placenta. I. Morphological studies and the distribution of the activities of 17β- and 20α-hydroxysteroid oxidoreductases in subcellular fractions
K. Föllow, G. Sokolowski, H. Grunz and B. Föllow

Hydroxysteroid oxidoreductases and their role in the catalysis of the specific transfer of hydrogen between steroid hormones in human placenta. II. Kinetic studies on the hydrogen transfer between C-17 of oestradiol-17β and C-20 of progesterone
K. Föllow, G. Sokolowski, J. Schmalbeck and B. Föllow

The purification and characterization of atropine esterase from rabbit liver microsomes
P. Moog and K. Krisch

Organ specificity in the sexual differentiation of the 17β-hydroxysteroid dehydrogenase activities of the rat
R. Gharf, U. Vetter and H. Schriefers

Unusual glycolipids in brain cortex of a visceral lipodisosis (Niemann-Pick diseases?)
R. Kannan, H.-B. Tjiong, H. Debuch and H.-R. Wiedemann

The formation of plasmalogenes at the time of myelination in the rat, VII: Incorporation of (1-14C)-acetate into the aldehydes and into the sphingosine bases at different stages
G. Robbers, H. Fünniss and H. Debuch

Time course of the induction by cyclohexane of hydroxylases in mouse liver and a suitable parameter for hydroxylase activities
G. Mohn and E.-M. Philipp

The relation between the blood-level of a substrate and enzyme kinetics studied with glycerol in the rat
R. H. Ackerman, K.-H. Bätzler and K. Wagner

Quantitative evaluation of reflection spectra of living tissues
R. Wodick and D. W. Lübbers

Monodehydro-L(+)-ascorbate reducing systems in differently prepared pig liver microsomes
H. Weber, W. Wets and B. Wolf

The molecular weight of J chains of human IgM
E. Kownatzki and W. Bähr

Studies on L-asparaginase, inactivation and modification of the enzyme by N-bromosuccinimide and the substrate specificity of the reaction
U. Menge and L. Jaenicke

Acyl digalactosyl diglyceride from leaf homogenates
E. Heinz, J. Rullkötter and H. Budzikiewics

Investigations on the mechanism of glycoside-splitting enzymes, VIII. Number of active sites of the β-glucosidase A and B from sweet almond emulsin determined by fluorescence measurements
G. Legler and F. Witassek

Phospholipids as cinchocaine action site during inhibition of lipoperoxidative reactions in rat liver microsomes
V. Mishin, I. Tsyrlav, O. Gromova and V. Lyakhovich

CONTENTS

Guidance for Authors

Changes in body fluid distribution and interstitial tissue compliance during the development and reversal of experimental renal hypertension in the rat. By J. LUCAS and M. A. FLOHER

The contrasting effects on bone histology of vitamin D and of calcium carbonate in the osteomalacia of chronic renal failure. By J. B. EASTWOOD, P. J. BORDIER, E. M. CLARKSON, S. TUN CHOT and H. E. DE WARDENER

Peripheral vitamin C metabolism in diabetics and non-diabetics: effect of intra-arterial insulin. By B. D. COX, MARGARET J. WHICHELOW, W. J. H. BUTTERFIELD and P. NICHOLAS

The single-passage extraction of $^{18}F$ in rabbit bone. By R. WOOTTON

The renin-angiotensin system in acute renal failure in rats. By P. G. MATTHEWS, T. O. MORGAN and C. I. JOHNSTON

SHORT COMMUNICATIONS

Effect of oxygen on sodium transfer across the isolated frog skin. By J. N. NORMAN, J. R. SHEARER and G. SMITH

Variation in glomerular sialic acid content in diabetes and as the result of ageing. By A. DE BATS, A. H. GORDON and E. L. RHODES

Subscription: £2.00 ($7.50) per part; £20.00 ($70.00) per year.
Orders may be placed with your bookseller, or sent direct to the publishers.
