Is your electrophoresis good enough for our densitometer?

High Resolution of the SP1809

Scanning gels with the SP1809 is simplicity itself. Permanent and extremely accurate records are made in minutes to be interpreted at leisure. High resolution is a major feature of this instrument and we supply the test slide to prove it. The SP1809 will separate two lines 0.1 mm thick and 0.1 mm apart (A) and completely resolve two lines 0.2 mm apart (B). Although electrophoretic methods rarely require this degree of resolution, our densitometer is equipped to deal with it.

Convenient Storage and Interpretation

The traces are made and labelled in minutes, but can be interpreted at leisure, easily reproduced and conveniently stored. You can take the eye strain out of gel examination and have the research capabilities of the SP1800 to take your analyses much further.

Wide Wavelength Range

Because the SP1809 is incorporated into the advanced SP1800 Spectrophotometer, you get all the advantages of UV-Visible Scanning with a wide wavelength range (nucleic acids and proteins may be detected in the ultraviolet, avoiding lengthy staining and destaining procedures), identification of bands by individual spectra and capability for handling a wide range of sample types.

NEW!
For receptor studies

[4(n)-3H] Propranolol
15-30Ci/mmol

other new compounds also now available

L-[6-3H] Fucose
15-30Ci/mmol

[4(n)-3H] Cytochalasin B
10-20Ci/mmol

[1,2,4(n)-3H] Methandrostenolone
30-50Ci/mmoll

D-[2,3,4,5(n)-14C] Shikmic acid
50-100mCi/mmol

Full details on request.

No. 40 THE METABOLISM AND FUNCTION OF GLYCOPROTEINS

Edited by R. M. S. SMELLIE and J. G. BEELEY

1974 189 pp. £7.00 ($17.50)

This volume records the proceedings of a symposium held in University College London in April 1974. Each of the ten papers is by an international authority and presents a survey of recent progress in certain aspects of the study of glycoproteins. Topics include methods of analysis, the nature of the carbohydrate–peptide linkage, heterogeneity of glycoproteins, sites of glycosylation, assembly of the carbohydrate moieties, immunoglobulin synthesis, sialic acid modifications, the role of sialic acid and the structure of blood-group-specific glycoproteins in normal and transformed cells.

Available from your bookseller or agent, or direct from

THE BIOCHEMICAL SOCIETY (PUBLICATIONS)
P.O. Box 32, Commerce Way,
Colchester CO2 8HP, Essex

Leaflets giving details of contents of the above publications are available on request
The renin-angiotensin system in acute renal failure of rats. By W. RAUH, P. OSTER, R. DIETZ and F. GROSS

Autoregulation of renal blood flow in dogs at normal body temperature and at 27°C. By B. J. CHAPMAN, W. R. WITHEY and K. A. MUNDAY

Methionine adenosyltransferase, cystathionine $\beta$-synthase and cystathionine $\gamma$-lyase activity of rat liver subcellular particles, human blood cells and mixed white cells from rat bone marrow. By JENNIFER ALLSOP and R. W. E. WATTS

Adaptations in urea and ammonium excretion in metabolic asisosis in the rat: a reinterpretation. By JANE OLIVER and E. BOURKE

SHORT COMMUNICATIONS

Effects of beta-adrenergic receptor blockade on the renal vascular response to a low sodium diet in the rabbit. By D. J. WARE and J. G. G. LEDINGHAM

Effect of salmon calcitonin on cardiac output, oxygen transport and bone turnover in patients with Paget's disease. By W. A. CROSBIE, S. M. MOHAMEDALLY and N. J. Y. WOODHOUSE

Subscription: £2.00 ($7.50) per part; £20.00 ($70.00) per year. Orders may be placed with your bookseller, or sent direct to the publishers.
Boehringer Mannheim

Benefits for you

- Confidence through Quality Control — probably the most exacting in the world
- Service — first class, unequalled
- Economy — cost competitive especially when related to performance
- Innovation — constant developments through progressive research
