The relationship between mitochondrial heterogeneity and gluconeogenesis in liver mitochondria of the rat, pigeon and guinea pig
C. A. Lamartiniere and G. Weiss

Purification and characterization of phosphodiesterase from Crinotus venom
G. R. Philips

Limited hydrolysis of tRNA by phosphodiesterase
G. R. Philips and T. Chiemprasert

Hypoxanthine phosphoribosyltransferase and hypoxanthine uptake in human erythrocytes
W. Gutensohn

Isolation and partial characterization of an arginine-rich apolipoprotein from human plasma very-low-density-lipoproteins: apolipoprotein
G. Utermann

Studies on the asymmetric arrangement of membrane-lipid-enveloped virions as a model system
W. Stoffel, R. Anderson and J. Stahl

Ecdysone oxidase, an enzyme from the blowfly Calliphora erythrocephala (Meigen)
J. Koolman and P. Karlson

Identification of cytochrome a and a3 in yeast cells
D. Kuchnitz and B. Hess

Drug-induced foam cell reactions in rats, II: Chemical analysis of lipids stored in lungs and foam cells after treatment with chlophentermine 5-[p-(fluoren-9-yldienemethyl)phenyl]-2-piperidinemethanol (RM1 10.393 and 1-chloramtriptyline
D. Karabelnik and G. Zbinden

Influence of long-term swimming training on the structure and enzyme activity of myosin in the rat myocardium
I. Medugorac, A. Kämmerer, R. Jacob and M. F. Manent

Short Communications

Accumulation of basic amino acid residues, rate of autolysis and relative length of gut during trypsin evolution
K. Müller and R. Zwilling

On the detachment of the regulatory subunit of brain protein kinase from a cAMP-polyacrylamide gel
E. Rieke, N. Panitz, A. Eigl and K. G. Wagner

The covalent structure of glyceraldehyde-phosphate dehydrogenase from human muscles. Isolation and amino acid sequence of peptides from trypsin digest
K. Nowak, M. Kuczek, L. Ostropolska, A. Malarska, M. Woyny and T. Baranowski

4-Denitro-4-azido-chloramphenicol as a "photoaffinity label"
F. Seela and F. Cramer

Cytolysis of red cells mediated by phalloisine, a toxin binding to N-acetylglucosamine on the cell surface
H. Faulstich and M. Weckauf

Comparative thermostability of thermophilic and mesophilic 6-phosphogluconate dehydrogenase
A. Fontana, C. Grandi, E. Boccu and F. M. Veronese

Cumulative Indices

Save Research Time
Busy researchers and authors find that these multi-volume indices are invaluable. Where time is money the cost is recovered quickly. Produced as a service to subscribers and priced accordingly.

Edited by R. M. S. SMELLIE
1974 151 pp. £5.00 ($13.50)

No. 40 THE METABOLISM AND FUNCTION OF GLYCOPROTEINS
Edited by R. M. S. SMELLIE and J. G. BEELEY
1974 189 pp. £7.00 ($17.50)

This volume records the proceedings of a symposium held in University College London in April 1974. Each of the ten papers is by an international authority and presents a survey of recent progress in certain aspects of the study of glycoproteins. Topics include methods of analysis, the nature of the carbohydrate–peptide linkage, heterogeneity of glycoproteins, sites of glycosylation, assembly of the carbohydrate moieties, immunoglobulin synthesis, sialic acid modifications, the role of sialic acid and the structure of blood-group-specific glycoproteins in normal and transformed cells.

Effect of cellulose phosphate on calcium and magnesium homeostasis: studies in normal subjects and patients with latent hypoparathyroidism. By A. M. Parfitt

Effect of cellulose phosphate and dietary calcium restriction in primary hyperparathyroidism. By A. M. Parfitt

Liposomes as vehicles for the local release of drugs. By A. W. Segal, G. Gregoriadis and C. D. V. Black

Chronic effects of chlorothiazide on reabsorption by the proximal tubule of the rat. By E. J. Weinman and G. Eknayan

Determination of platelet and fibrinogen half-life with [75Se]selenomethionine: studies in normal and in diabetic subjects. By J. C. Ferguson, N. Mackay, J. A. D. Philip and D. J. Sumner

Continuous blood sampling: a modified double-lumen catheter. By D. B. Garrigoch

The actions of bradykinin and eledoisin in the canine isolated kidney: relationships to prostaglandins. By J. C. McGuff, H. D. Itskovitz and N. A. Terragno

Total body potassium in children, with particular reference to coeliac disease. By K. Boddy, Priscilla C. King and F. Carswell

Effect of progesterone on renal sodium handling in man: relation to aldosterone excretion and plasma renin activity. By Suzanne Oparil, E. N. Ehrlich and M. D. Lindheimer

Soluble high-molecular-weight E fragments in the plasmin-induced degradation products of cross-linked human fibrin. By P. J. Gaffney, D. A. Lane and M. Brasher

Effect of liver failure on the response of ventilation and cerebral circulation to carbon dioxide in man and in the goat. By N. N. Stanley, B. G. Salisbury, L. C. McHenry, Jr and N. S. Cherniack

Analytical subcellular fractionation of human granulocytes with reference to the localization of vitamin-B12-binding proteins. By S. P. Kane and T. J. Peters

SHORT COMMUNICATION

Adrenal weight and catecholamine content in renal and calciferol-induced hypertension in rabbits. By Jennifer E. Angell-James and D. A. Powiss

Subscription: £2.00 ($7.50) per part; £20.00 ($70.00) per year.
Orders may be placed with your bookseller, or sent direct to the publishers.

The Cytochalasins:
(Greek: cytos, cell; chalasis, relaxation)

Versatile Probes for Cytological Research

The Cytochalasins are a group of structurally related fungal metabolites discovered in 1964 in the laboratories of the Pharmaceuticals Division of Imperial Chemical Industries, Ltd. The Cytochalasins share a number of unusual, interesting and characteristic effects on the cell and are becoming increasingly important as research probes in cytology. To date, Cytochalasin B has been used in the vast majority of reported experiments.

Major biological effects observed with the Cytochalasins include:

1. Inhibition of the division of cytoplasm. Total inhibition of cytoplasmic cleavage is obtained without interference with division of the nucleus resulting in binucleate cells. If cultured cells are allowed to remain in the active medium, nuclear division continues and large multinucleate cells are observed.

2. Reversible inhibition of cell movement. When moving L cells on a glass surface are treated with Cytochalasin B, peripheral and internal cell movements disappear, but are readily restored by washing the cells with normal medium. This effect is best observed by time-lapse cinematographic studies.

3. Induction of nuclear extrusion. In this very interesting phenomenon, it is remarkable that a cell can be induced to eject its nucleus entirely within minutes of treatment with a chemical compound. Most noteworthy is the fact that Cytochalasin E rarely produces nuclear extrusion. However, it is unique in producing a “halo” around the nucleus.

The Cytochalasins also exert inhibitory effects on the following biological processes: phagocytosis, platelet aggregation and clot retraction, glucose transport, thyroid secretion, and release of growth hormone.

Cytochalasin A has been shown to be a sulfhydryl-reactive agent, inhibiting growth and sugar uptake in Saccharomyces strain 1016.

The antibiotic and antitumor activities of Cytochalasin D have been reported.

Research continues to uncover new biological effects for these Cytochalasins. Space does not allow us to cite the several hundred references from the literature but a data sheet and comprehensive bibliography are available free upon request.

Cytochalasins A, B and E are manufactured in England by Imperial Chemical Industries, Ltd. and are distributed by Aldrich.
