The Biochemical Journal
Cumulative Indices

Save Research Time
Busy researchers and authors find that these multi-volume indices are invaluable. Where time is money the cost is recovered quickly. Produced as a service to subscribers and priced accordingly.

NOW AVAILABLE
Bolton and Hunter reagent for protein iodination
N-succinimidyl 3- (4-hydroxy, 5- [125I] iodophenyl) propionate.

A reagent for the iodination under very mild conditions of labile proteins and proteins not containing tyrosine residues*

- highly purified mono-iodo ester
- competitively priced

BIOCHEMICAL SOCIETY SYMPOSIA SERIES

No. 36 NEUROTTRANSMITTERS AND METABOLIC REGULATION
Edited by R. M. S. SMELLIE
1972 169 pp. £4.00 ($12.00)

No. 37 THE STRUCTURE AND FUNCTIONS OF EUKARYOTIC RIBOSOMES
Edited by R. M. S. SMELLIE
1973 130 pp. £3.50 ($10.50)

No. 38 NITROGEN METABOLISM IN PLANTS
Edited by T. W. GOODWIN and R. M. S. SMELLIE
1973 351 pp. £8.00 ($20.00)

No. 39 CALCIUM AND CELL REGULATION
Edited by R. M. S. SMELLIE
1974 161 pp. £5.00 ($13.50)

No. 40 THE METABOLISM AND FUNCTION OF GLYCOPROTEINS
Edited by R. M. S. SMELLIE and J. G. BEELEY
1974 189 pp. £7.00 ($17.50)

This volume records the proceedings of a symposium held in University College London in April 1974. Each of the ten papers is by an international authority and presents a survey of recent progress in certain aspects of the study of glycoproteins. Topics include methods of analysis, the nature of the carbohydrate–peptide linkage, heterogeneity of glycoproteins, sites of glycosylation, assembly of the carbohydrate moieties, immunoglobulin synthesis, sialic acid modifications, the role of sialic acid and the structure of blood-group-specific glycoproteins in normal and transformed cells.

CONTENTS

The spectrophotometric determination of human serum carboxypolyepitidase with angiotensin
converting enzyme-like activity. By J. J. SUMMARY
Rat hepatic sodium plus potassium ion-dependent adenosine triphosphatase after treatment
with digoxin and thyroxine. By R. LINDSAY and J. L. W. PARKER
The effect of repeated phlebotomy on bilirubin turnover, bilirubin clearance and unconjugated
hyperbilirubinaemia in the Crigler–Najjar syndrome and the jaundiced Gunn rat: applica-
tion of computers to experimental design. By P. D. BERK, B. F. SCHARSCHMIDT, JEANNE G.
WAGGONER and S. C. WHITE
Effect of phenobarbitone on plasma lipids in normal subjects. By P. N. DURRINGTON, C. J. C.
ROBERTS, LYN JACKSON, R. A. BRANCH and M. HARTOG
Analytical subcellular fractionation studies on rat liver and on isolated jejunal enterocytes
with special reference to the separation of lysosomes, peroxisomes and mitochondria. By
T. J. PETERS and H. SHIO
The ventilatory response in severe metabolic acidosis. By M. FULOP
The relation between functioning parietal cell and gastrin cell masses in two groups of duodenal
ulcer patients. By D. J. BYRNEs, SHIU KUM LAM and W. SIRCUS
Disappearance of 125I-labelled and unlabelled insulins from blood in normal and injured rats.
By K. N. FRAYN
Branched-chain amino acids, nitrogen excretion and injury in man. By J. H. WEDGE, R.
DE CAMPOS, A. KERR, R. SMITH, ROSE FARRELL, VERA IIC and D. H. WILLIAMSON
Turnover of plasma glucose and free fatty acids in patients on the first day after myocardial
infarction. By I. A. NIMMO, R. H. SMITH, M. A. DOLDER and M. F. OLIVER
Renal haemodynamics and plasma renin in patients with essential hypertension. By E. B.
PEDERSEN and H. J. KORNERUP
Effect of vasopressin on plasma volume and renin release in man. By A. M. KHOKHAR, J. D. H.
SLATER, MARY L. FORSING and N. N. PAYNE
Biochemical and morphological studies on human jejunal mucosa maintained in culture.
By C. L’HIRONDEL, W. F. DOE and T. J. PETERS

SHORT COMMUNICATION

The porphyrinogenic effects of kryptopyrrole in the rat and the occurrence of urinary
kryptopyrrole in human hereditary hepatic porphyria. By M. J. BRODIE, D. J. M. GRAHAM,
G. G. THOMPSON, M. R. MOORE and A. GOLDBERG

Subscription: £2.75 ($8.50) per part; £28.00 ($100.00) per year.
Orders may be placed with your bookseller, or sent direct to the publishers.

(-)-p-Bromotetramisole: a potent alkaline phosphatase inhibitor

In the process of evaluating the biochemical effects of Tetramisole (dl-2,3,5,6-tetrahydro-6-phenylimidazo[2,1-b]thiazole hydrochloride), a broad-spectrum anthelmintic, it was discovered that the compound was a potent inhibitor of alkaline phosphatase. Consequently, similar studies were undertaken on the analogs of Tetramisole. Its levorotatory isomer, Levamisole (R12456, l-Tetramisole, l-2,3,5,6-tetrahydro-6-phenylimidazo[2,1-b]thiazole hydrochloride) and R8231 [dl-6-(m-bromophenyl)-2,3,5,6-tetrahydroidimidazo[2,1-b]thiazole oxalate] proved to be potent, stereospecific, noncompetitive inhibitors of alkaline phosphatase from various tissues, yet showed no inhibition of the intestinal isoenzyme. The d-isomers were completely inactive.

l-p-Bromotetramisole (R30402) has been found to be more potent than Levamisole as an inhibitor of alkaline phosphatase. The inactive d-isomer, d-p-bromotetramisole (R30401), is useful as an internal control.

The organo- and stereospecificity of these alkaline phosphatase inhibitors has been demonstrated biochemically as well as cytochemically in a variety of tissues and species. Specific phosphatase activities are not altered by these compounds. Thus, this high degree of specificity allows the differentiation between "true" 5'-nucleotidase, Na-K-ATPase, Mg-ATPase or glucose-6-phosphatase and non-specific alkaline phosphatase, the latter being totally suppressed upon addition of the inhibitor.

1-p-Bromotetramisole is reportedly more appropriate for the quantitative determination of the intestinal and placental isoenzymes in human serum than the commonly used L-phenylalanine.

1-p-Bromotetramisole has several advantages over Levamisole and R8231:
1. Potency - it is ten times as potent as Levamisole
2. Stability - it is more stable in aqueous solution than R8231
3. The availability of both levo- and dextro-isomers.
