This volume records the proceedings of a symposium held in University College London in April 1974. Each of the ten papers is by an international authority and presents a survey of recent progress in certain aspects of the study of glycoproteins. Topics include methods of analysis, the nature of the carbohydrate-peptide linkage, heterogeneity of glycoproteins, sites of glycosylation, assembly of the carbohydrate moieties, immunoglobulin synthesis, sialic acid modifications, the role of sialic acid and the structure of blood-group-specific glycoproteins in normal and transformed cells.
