VOLUME 2
ESSAYS IN MEDICAL BIOCHEMISTRY
Edited by V. MARKS and C. N. HALES

187 pp. £4.00 (US $8.00) by surface mail to overseas addresses

Volume 2 of Essays in Medical Biochemistry continues the practice established in the first of providing, in readable form, highly authoritative but personal reviews of topics that are of general interest to medical biochemists. The subjects chosen for review are those that have undergone growth as a result of major conceptual and technological advances, and include essays by acknowledged world experts on complement, trace metals, acquired disorders of haem synthesis and chronobiochemistry.

List of Contents and Authors:
The Human Complement System: Biochemistry, Biology and Pathobiology
   By D. T. Fearon and K. F. Austen

The Clinical Value of Trace-Metal Measurements
   By H. T. Delves

Acquired Disorders of Haem Synthesis
   By G. H. Elder

A New Perspective: Chronobiochemistry
   By H. W. Simpson

Still Available:
ESSAYS IN MEDICAL BIOCHEMISTRY VOLUME 1
131 pp. £2.00 (US $5.00)

BIOCHEMICAL ADAPTATION TO ENVIRONMENTAL CHANGE

Edited by R. M. S. Smellie and J. F. Pennock

240 pp. (ISBN 0 904498 01 8) £10.00 (U.S. $20.00)

As biochemists have become more interested in the pathways of metabolism and mechanisms of control in a wider range of living systems, it has become apparent that, although there are many features in common to organisms inhabiting different environments, a variety of adaptations or refinements has been necessary so as to enable particular species to perform efficiently under the widely differing and often rapidly changing conditions to which they are exposed. Some of the more fully documented examples of these adaptations, including modifications in enzyme structure, function and activity, alteration in membrane lipids and performance and the substitution of one class of carrier molecule by another, are discussed in this volume.

List of contents and authors:

Chairman's Introduction by C. J. Duncan.
Design of Metabolic and Enzymic Machinery to Fit Lifestyle and Environment by P. W. Hochachka.
Temperature: A 'Shaping Force' in Protein Evolution by G. N. Somero and P. S. Low.
Temperature Adaptation in Fish by M. W. Smith.
Substrate Cycles in Metabolic Regulation and in Heat Generation by E. A. Newsholme and B. Crabtree.
Biochemical Adaptations for Flight in the Insect by B. Sacktor.
Facultative Anaerobiosis in Molluscs by A. de Zwaan, J. H. F. M. Kluytmans and D. I. Zandee.
Metabolic Consequences of Submersion Asphyxia in Mammals and Birds by A. S. Blixt.
Adaptations with Respect to Salinity by E. Schoffeniels.
Adaptations of Enzymes for Regulation of Catalytic Function by D. E. Atkinson.

CONTENTS

Editorial Review: Claude Bernard’s (extended) milieu interieur revisited: autoregulation of cell and subcell integrity. By E. R. ROBIN

Factors affecting angiotensin II concentrations in the human infant at birth. By FIONA BROUGHTON PETKIN and E. M. SYMONDS

Porphyrians in erythrocytes and blood plasma: preliminary studies with qualitative thin-layer chromatography. By T. K. WITH

Plasma noradrenaline concentrations in experimental renovascular hypertension in the rat. By H. J. DARGE, S. S. FRANKLIN and J. L. REID

Human hepatic 5-aminolaevulinate synthase: requirement of an exogenous system for succinylcoenzyme A generation to demonstrate increased activity in cirrhotic and anticonvulsant-treated subjects. By H. L. BONKOWSKY and JOANNE S. FOMEROY

Bone necrosis and urinary hydroxyproline excretion in rabbits. By C. R. WEATHERLEY, G. DALE, J. MCGURK and D. N. WALDER

Muscle-protein catabolism after injury in man, as measured by urinary excretion of 3-methylhistidine. By D. H. WILLIAMSON, ROSE FARRELL, ALISON KERR and R. SMITH

Proline and hydroxyproline excretion and vitamin C status in elderly human subjects. By C. J. BATES

SHORT COMMUNICATION

Intrarenal role of angiotensin II in controlling sodium excretion during dehydration in dogs. By N. C. TRIPPODO, J. E. HALL, T. E. LOHMEIER and A. C. GUYTON

The subscription price is £35.00 (U.K.), £35.00 (Overseas) and $120.00 (North America) per annum, post free.

Enzacryl® Gel

Packings for column and thin-layer permeation chromatography

Enzacryl Gel, a bead-polymerized chromatographic support for column and thin-layer gel permeation chromatography (GPC), is prepared by free-radical polymerization of N-acryloymorpholine and N,N'-methylenediacrylamide in aqueous solution. The reaction mixture is dispersed in liquid paraffin containing suitable surfactants, and the resulting beads are washed and graded according to size.¹,²,³

Enzacryl Gel is available in five grades or porosities, designated K0, K1, K2, K4 and K10. The swelling properties of a given grade vary with solvent. Thus, although pore size is predetermined largely by the total monomer concentration and ratio of monomer to cross-linker in the aqueous polymerization mixture, useful secondary variations in mean pore size may be obtained as a result of swelling variation in different chromatographic solvents.³ Enzacryl Gel K0 has the lowest mean pore size and is ideal for separation of small molecules in water, DMF and pyridine.

The most important advantage of Enzacryl Gel over other GPC supports is its utility in water, a wide range of organic solvents and an almost infinite variety of mixed-solvent systems. Enzacryl Gel easily withstands sterilization by heat. The matrix is relatively stable to extremes of pH,⁴ and is not susceptible to microbial attack.

For details on the chemical and physical characteristics, applicability, molecular weight exclusion limits and other properties of Enzacryl Gel, please request free copies of Aldrichimica Acta, vol. 9 (ref. 3 below) and a technical data sheet.

References:

Availability
Each of Enzacryl Gel grades K0, K1 and K2 is available in four bead sizes: extra fine (<45μ for thin-layer GPC), fine (40-75μ), medium (75-150μ) and coarse (150-300μ). Please order by grade and bead size.

- 25g $37.50
- 100g $100.00
- 86,080-8 Enzacryl® Gel K4, in pre-swollen form in water, for thin-layer GPC ......... 25g $32.00
- 86,081-6 Enzacryl® Gel K10, in pre-swollen form in water, for thin-layer GPC ......... 25g $33.70
- 86,009-3 Enzacryl Gel® CO₂,H₂O form, an acidic ion-exchange derivative of Enzacryl Gel K2 in bead form, diameter 75-150μ, exchange capacity 1.0-1.1 meq/g. .............. 10g $15.00
- 50g $50.00

Please request information on our Enzacryl® Carriers and Enzacryl® C Immobilized Enzymes.
