Announcing Volumes 33A and 33B in Professor Florkin’s masterful historical survey, A HISTORY OF BIOCHEMISTRY - a fascinating insight into the trials and errors of scientific endeavour - and a worthy addition to the series:

Comprehensive Biochemistry

edited by MARCEL FLORKIN, Emeritus Professor of Biochemistry, University of Liège, and ELMER H. STOTZ, Professor of Biochemistry, University of Rochester, School of Medicine and Dentistry, Rochester, NY, U.S.A.

Part V in Professor Florkin’s history, tracing the long process of evolution of Biochemistry, is devoted to the unravelling of Biosynthetic Pathways, and appears in two volumes.

"His (the author's) breadth of coverage and command of scientific detail remind one of Partington’s monumental History of Chemistry. When the last part of the history appears the reader will have a very comprehensive account of the history of biochemistry that will also guide him or her to recent work by historians on the history of physiology and biochemistry.” Science.

Volume 33A: A History of Biochemistry, Part V
by MARCEL FLORKIN
1979 xii + 420 pages Price: US $ 68.25/Dfl. 140.00 Subscription Price: US $58.00/
Dfl. 119.00 ISBN 0-444-80067-0

(Each chapter is followed by references)

Volume 33B: A History of Biochemistry, Part V
by MARCEL FLORKIN
1979 xii+323 pages US $52.75/Dfl. 108.00 Subscription Price: US $ 45.00/Dfl. 92.00
ISBN 0-444-80068-9

CONTENTS: General Preface. Preface to section VI. List of Plates. Introduction. Continuation of The biosynthetic pathways of amino acids and their extensions. Chapters. 64. Amino acids resulting of transaminations to products of glycolysis or of the tricarboxylic acid cycle (L-alanine, glutamic acid, aspartic acid) and amides derived of these amino acids (glutamine, asparagine). 65. The biosynthetic pathway of the amino acids of the glutamate family (glutamic acid, ornithine, arginine, proline) and its extensions (urea, pyrroline ring of nicotine, hyoscine and hydsciamine, pyrrolizidine alkaloids, guanidine compounds, pyrimidines) 66. Biosynthesis of methionine, cysteine and cystine. 67. Biosynthesis of branched-chain amino acids (yaline, isoleucine, leucine). 68. Biosynthesis of lysine and of derived alkaloids. 69. The biosynthesis of aromatic amino acids. 70. Extensions on the biosynthetic pathway of phenylalanine and tyrosine (epinephrine compounds, melanins, thyroid-active amino acids, ubi quitinones, phenyllylamine and tetraisoquinolene alkaloids, colchicine, lignine monomers, coumarin and its phenolic derivatives, flavonoids). 71. Extensions of the pathway of tryptophan biosynthesis (serotonin, niacin, indole-acetic acid, indole alkaloids). 72. The pathway of histidine biosynthesis and its extensions (ergothioneine, histamine). 73. Biosynthesis of serine, phosphoserine and glycine. 74. Biosynthesis of homoserine and of threonine. Subject Index. Name Index.

Advanced techniques in routine use at The Radiochemical Centre.

Described below are just two examples of the many up-to-date techniques, which have been pioneered or applied for routine use at The Radiochemical Centre. These developments are part of our constant endeavour to maintain our position at the forefront of the specialised field of tracer methodology, so that we can continue our supply of radiochemicals of the highest quality and technical specifications.

**Distribution of labelling in tritium compounds**

Modern techniques for the production of tritiated compounds are more sophisticated than those used in the early days of tritium labelling, and produce compounds labelled in specific positions rather than generally labelled. Nevertheless, it is necessary for many tracer applications of tritium compounds to know the precise position and configuration of the tritium labels. Traditional chemical methods of doing this are tedious and time consuming and subject to considerable error, and so the routine supply of such information has until recently not been possible.

The Radiochemical Centre, in collaboration with the University of Surrey, has developed over the past eight years the technique of tritium nuclear magnetic resonance (TnMr) spectroscopy for this purpose. This method is much quicker and more accurate than the traditional chemical or biochemical methods for determining distribution of tritium labelling.

It is now used routinely to establish the distribution of tritium labelling produced by the usual methods of tritiation employed at The Radiochemical Centre. We supply accurate details as to the position and configuration of the tritium labels for an increasing number of our labelled compounds.

High performance liquid chromatography (HPLC)

This relatively new development of column chromatography is carried out using high efficiency microparticulate column packings of closely defined size.

Chromatography is carried out under pressure to ensure good flow rates and reduce diffusion of separated compounds. Dead volumes are kept to an absolute minimum. The result is that many separations can be carried out more quickly and with better resolution than with previously used chromatographic methods such as thin-layer chromatography or conventional column chromatography.

Work aimed at developing the applications of this method to radiolabelled compound separations is still in progress, but The Radiochemical Centre is already using the technique in many of its production processes, and in analytical applications. The result is purer compounds for the customer and greater efficiency of working.

The example illustrated below illustrates the clear superiority of HPLC when used as an analytical tool. The mixture used comprised the tritium labelled mono-, di- and triphosphates of adenosine, cytidine, guanosine and uridine, and all are clearly separated in the HPLC system.

---

**Labelled compounds you can trust**

The Radiochemical Centre

Amersham

This compendium, previously published under the title of *Collected Tentative Rules and Recommendations of the Commission on Biochemical Nomenclature* has now been updated and published in its third edition for the International Union of Biochemistry by the Biochemical Society under the title: *Biochemical Nomenclature and Related Documents*.

The compendium, prepared by the IUB Committee of Editors of Biochemical Journals, collects together all the current rules and recommendations on nomenclature that have emanated from the IUPAC-IUB and IUB nomenclature committees. As such it is an indispensable part of the library of all biochemists.

The price is £3.50/US$7.00, postage-paid (vi plus 223 pages, paper bound). A 20% discount is allowable on orders for 10 or more copies to a single address. Payment must accompany the order.

Order from The Biochemical Society Book Depot, P.O. Box 32, Commerce Way, Colchester CO2 8HP Essex, U.K.
SPECIAL PUBLICATION No. 5

Safety in Biological Laboratories

68 pp + xii  ISBN 0904498 05 0

A concise, easily readable guide for workers in Life-Science Laboratories from Anatomy through Biophysics... Nutrition... Veterinary to Zoology. Emphasis is on SAFETY rather than DANGER, on avoidance of risks, elimination of hazards, and on the need for safety consciousness for the benefit of others as well as the worker's own person. Among topics discussed are radiation, animals, pathogens, carcinogens and other dangerous substances, vacuum distillation, fire and electricity as well as such simple operations as emptying autoclaves and connecting plastic tubing to glass tubing. The booklet is intended for all who work in laboratories, from the newest assistant to the head of department (who may come to realize that some of their standard practices contain avoidable elements of danger). So generous discounts are offered for bulk purchase.

The booklet should help every reader to be more likely to survive and to pass on the message:

SAFETY IN BIOLOGICAL LABORATORIES.

CONTENTS

Preface
Glossary

Precautions for All Laboratory Workers
By Arthur W. Hartley and Vernon Booth

Electrical Hazards, Fire and Explosion
By Edward Hartree

The Role of the Safety Officer
By Oliver Phillip Edmonds

The Animal House
By Donald W. Jolly

Microbiological Hazards
By Richard D. Barry

Carcinogens, Mutagens, Teratogens
By Donald B. Cater and Edward Hartree

Radiation Hazards
By Philip P. Dendy

Subject Index

Limited stocks available of earlier volumes

No. 1  BIOCHEMISTRY AND MENTAL ILLNESS
Edited by L. L. IVERSEN and S. P. R. ROSE  251 pp. £4.50 ($12.00)

No. 2  BIOCHEMISTS IN INDUSTRY
Edited by K. W. FULLER  58 pp. £1.25 ($3.50)

No. 3  THE METABOLISM AND FUNCTION OF VITAMIN D
Edited by D. R. FRASER  114 pp. £4.00 ($10.50)

No. 4  MEMBRANE ADENOSINE TRIPHOSPHATASES AND TRANSPORT PROCESSES
Edited by J. R. BRONK  197 pp. £5.00 ($12.50)

Obtainable from your bookseller or agent, or direct from

THE BIOCHEMICAL SOCIETY BOOK DEPOT
P.O. Box 32, Commerce Way, Colchester CO2 8HP, Essex

Leaflets giving details of contents of the above publications are available on request.
At the centre of carbohydrate metabolism there is the TCA cycle

at the centre of metabolic research there is

Boehringer Mannheim

- With over 600 top quality Biochemical Reagents now listed in the 1978/79 catalogue, most requirements in this field can be satisfied from our catalogue. Among the most recent additions you will find G6P-DH, HK and GLDH now available in stable lyophilised forms for use where the addition of ammonium ions is to be avoided.

- New introductions are a regular event due to continuing research by our scientific teams in Tutzing, West Germany. One result has been major improvements in the production techniques of pyridine cofactors setting new standards of purity, performance, stability and economy - to give you even more reliable reagents.

Order your Biochemical Reagents from B.C.L. - Our quality is matched by our return-of-post service.
