BIOSCIENCE REPORTS is a new international monthly journal devoted to the rapid publication of high-quality papers that advance new concepts in the areas of molecular and cellular biology. Review articles and other topical material will be included from time to time.

**Hon. Advisory Editors:**
- A. KORNBERG
- R. R. PORTER
- F. SANGER

**Board of Editors:**
- Chairman: C. A. PASTERNAK (U.K.)
- Deputy Chairman: K. A. PIEZ (U.S.A.)
- R. A. BRADSHAW (U.S.A.)
- W. J. BRAMMAR (U.K.)
- G. H. DIXON (Canada)
- R. F. DOOLITTLE (U.S.A.)
- A. A. EDDY (U.K.)
- D. M. ENGELMAN (U.S.A.)
- J. R. GRIFFITHS (U.K.)
- F. W. HEMMING (U.K.)
- H.-D. KLENK (Germany)
- E. LAZARIDES (U.S.A.)
- W. J. LENNARZ (U.S.A.)
- H. J. MÜLLER-EBERHARD (U.S.A.)
- V. MUTT (Sweden)
- A. PETERKOFSKY (U.S.A.)
- P.-P. SLONIMSKI (France)
- R. J. P. WILLIAMS (U.K.)
- A. R. WILLIAMSON (U.K.)

**Publication Details**
- ISSN 0144-8463
- Monthly, starting January 1981. There will be one volume per year.

**Subscription Rate**
- 1 year: £85.00  US$191.00
- Per part: £8.00  US$18.00

Despatched by Air Mail

**Call for Papers**
Short reports of original research, of sufficient interest and significance to justify rapid publication, in all areas of biochemistry can be submitted directly to any member of the Board of Editors. Publication will be within approximately 2 months of receipt. Instructions to authors for *Bioscience Reports* with the addresses of all Editors are available from The Biochemical Society, 7 Warwick Court, London WC1R 5DP.

The Lymphocyte Cell Surface

Edited by P. B. Garland and M. J. Crumpton

pp. 124 (ISBN 0 904498 10 7) £15.00 (US$35.00)

A Biochemical Society Symposium held in Cambridge in June 1979

The Biochemical Society's Forty-fifth Symposium held at Cambridge in June 1979 dealt with two areas of biomedical research currently regarded as among the most exciting and clinically important research interests: the molecular mechanics of the immune response and the biochemistry of the cell surface. Speakers at the Symposium reviewed results from this work and in addition gave emphasis to those research aspects providing greatest promise in future work with the lymphocyte. A number of the major contributions to the Symposium form the basis of this publication.

Preface
A Calcium Hypothesis for the Control of Cell Growth
by J. C. Metcalfe, T. Pozzan, G. A. Smith & T. R. Hesketh

Cell-Surface Antigens of Lymphocytes: Markers and Molecules
by A. F. Williams

Structural Similarities Between Thy-1 Antigen from Rat Brain and Immunoglobulin
by D. G. Campbell, A. F. Williams, P. M. Bayley & K. B. M. Reid

The Motor of Amoeboid Leucocytes
by T. P. Stossel, J. H. Hartwig, H. L. Yin & O. Stendahl

Contact-Induced Modification of Lymphocyte Morphology
by L. Wanger & K.-G. Sundqvist

Functional Studies on Receptor Complexes of B-Lymphocytes Involved in Regulation of Growth and Maturation
by F. Melchers, J. Andersson, W. Lernhardt & M. H. Schreier

Biosynthesis of Cell-Surface Immunoglobulins
by P. A. Singer, H. H. Singer & A. R. Williamson

The Natural History of Transmembrane Cell-Surface Glycoproteins
by H. F. Lodish

Molecular Models
Flexible StereoChemistry™ Models (Darling Models)

Newly developed by Professor Stephen D. Darling, the models bring a new dimension to the visualization of molecules in space. The special feature of flexibility permits one to "see" whether there is strain in a molecule due to angle distortion or torsional stress and whether two atoms in a molecule can "approach" each other. This unique feature in the Flexible StereoChemistry™ kit permits a more realistic study of spatial relationships and accurate relative interatomic distances for making comparisons. They are approximately the same size as the Fieser models. We believe the Darling models are best suited for the individual chemist's study.

The Flexible StereoChemistry™ Kit contains the following components:
• 2 180° Triple-bonded carbon pairs
• 8 Double bonds
• 40 109° Hybrid orbital (black-carbon), sp³
• 16 120° Hybrid orbital (grey-carbon), sp³
• 4 109° Hybrid orbital (blue-nitrogen), sp³
• 12 109° Hybrid orbital (red-oxygen), sp³
• 12 Marker balls (3 each of white, red, green, blue)

Z10,800-6 Darling Flexible StereoChemistry™ Kit $24.95

Fieser Molecular Model Research Kit
Chemistry in Three Dimensions

Low-cost Molecular Models — designed by Professor Louis F. Fieser.1-4 The models consist of sturdy, color-coded plastic and aluminum parts which snap together to form bonds. They are easily assembled and handled, and may be disassembled for repeated use.

Fieser models are highly effective for assessing conformational and steric effects, and geometrical relationships. We believe the Fieser models are best for lecture demonstrations.

Each kit consists of the following pieces:
• 30 tetrahedral carbon atoms (black)
• 6 pairs of double-bonded carbon atoms (black)
• 5 oxygen or sulfur atoms (red)
• 2 trivalent nitrogen atoms (blue)

Z10,400-0 Fieser Molecular Model Research Kit $24.00

See page 1102 of the Aldrich catalog for large quantities of individual atomic models.
