ENZYMES AS DRUGS

edited by **J.S. Holcberg**, *Children's Cancer Center and Medical College Wisconsin*,
and **J. Roberts**, *Memorial Sloan-Kettering Cancer Center, New York*

The diverse applications of enzymes as therapeutic agents are reviewed here, and the book discusses methods used to alter enzymes to overcome problems of biodegradation, distribution and antigenicity by chemical modification, encapsulation and binding of the enzyme to surfaces.

July 1981 466 pages
0471 05061 X \$79.20/£41.50

CARBOHYDRATE METABOLISM: Quantitative Physiology and Mathematical Modelling

edited by **C. Cobelli**, *Istituto di Elettrotecnica ed Elettronica, Universita di Padova*, and *Istituto per Ricerche di Dinamica dei Sistemi e di Bioingegneria del CNR, Padova, Italy*,
and **R.N. Bergman**, *Department of Physiology and Biophysics, University of Southern California, Los Angeles*

This book is concerned with the regulation of carbohydrate metabolism at the level of the whole organism. It provides insight into research which has advanced understanding of such regulation, and which uses techniques such as tracer kinetics, Arterio-Venous (A-V) difference methods, glucose clamp, the perfused and artificial organ approaches, and mathematical modelling.

August 1981 approx. 432 pages
0471 27912 9 approx. \$75.60/£27.00

UNDERSTANDING ENZYMES

by **T. Palmer**, *Senior Lecturer in Biochemistry, Trent Polytechnic, Nottingham*

A concise and lucid introduction to enzymology. Balanced and reasonably detailed, it accounts for the theoretical and applied aspects of the subject.

April 1981 406 pages
085312 202 4 \$63.25/£25.00

LYMPHOCYTIC REGULATION BY ANTIBODIES

edited by **C. Bona**, *Mount Sinai Medical School*,
and **P.-A. Cazenave**, *Pierre and Marie Curie University, Paris*

March 1981 336 pages
0471 05693 6 \$61.90/£32.60

METHODS FOR EVALUATING BIOLOGICAL NITROGEN FIXATION

edited by **F.J. Bergersen**, *CSIRO, Division of Plant Industry, Canberra, Australia*

November 1980 712 pages
0471 27759 2 \$104.50/£38.00

TOPICS IN ENZYME AND FERMENTATION BIOTECHNOLOGY, Vol. 5

edited by **A. Wiseman**, *University of Surrey*

The discovery of many new and important enzymes has involved much collaboration between microbiologists, biochemists, and chemists, with the additional collaboration of biochemical engineers; these enzymes can be put to use in stabilised, free or immobilised form. This new volume from a successful, ongoing Series will help motivate these groups of workers to appreciate and share each other's field of expertise.

THE MOLECULAR BASIS OF ANTIBIOTIC ACTION, 2nd Ed.

by **E.F. Gale**, *Department of Biochemistry, University of Cambridge*; **E. Cundliffe**, *Department of Biochemistry, University of Leicester*; **P.E. Reynolds**, *Department of Biochemistry, University of Cambridge*;
M.H. Richmond, *Department of Bacteriology, University of Bristol*, and **M.J. Waring**, *Department of Pharmacology, University of Cambridge*

Summarizes our present understanding of the mechanisms by which antibiotics work. It stresses those interactions which enable antibiotics to act selectively, first describing various biochemical targets for drug action, then, covering in detail, agents which act against cell walls, cytoplasmic membranes, nucleic acids and ribosomes.

SYMPOSIA SERIES No. 45

The Lymphocyte Cell Surface

Edited by **P. B. Garland** and **M. J. Crumpton**

pp. 124 (ISBN 0 904498 10 7) £15.00 (US\$35.00)

A Biochemical Society Symposium held in Cambridge in June 1979

The Biochemical Society's Forty-fifth Symposium held at Cambridge in June 1979 dealt with two areas of biomedical research currently regarded as among the most exciting and clinically important research interests: the molecular mechanics of the immune response and the biochemistry of the cell surface. Speakers at the Symposium reviewed results from this work and in addition gave emphasis to those research aspects providing greatest promise in future work with the lymphocyte. A number of the major contributions to the Symposium form the basis of this publication.

Preface

A Calcium Hypothesis for the Control of Cell Growth

by **J. C. Metcalfe, T. Pozzan, G. A. Smith & T. R. Hesketh**

Cell-Surface Antigens of Lymphocytes: Markers and Molecules

by **A. F. Williams**

Structural Similarities Between Thy-1 Antigen from Rat Brain and Immunoglobulin

by **D. G. Campbell, A. F. Williams, P. M. Bayley & K. B. M. Reid**

The Motor of Amoeboid Leucocytes

by **T. P. Stossel, J. H. Hartwig, H. L. Yin & O. Stendahl**

Contact-Induced Modification of Lymphocyte Morphology

by **L. Wanger & K.-G. Sundqvist**

Functional Studies on Receptor Complexes of B-Lymphocytes Involved in Regulation of Growth and Maturation

by **F. Melchers, J. Andersson, W. Lernhardt & M. H. Schreier**

Biosynthesis of Cell-Surface Immunoglobulins

by **P. A. Singer, H. H. Singer & A. R. Williamson**

The Natural History of Transmembrane Cell-Surface Glycoproteins

by **H. F. Lodish**

Major new books

Recent Advances in Clinical Biochemistry – 2

Edited by K. G. M. M. Alberti and C. P. Price

1981 328 pages 61 line and 3 half-tone illus Paper £19.00
ISBN 0 443 02005 1

An expert team of contributors from Britain, Europe and the USA provides up-to-date and comprehensive reviews of recent advances in the rapidly developing field of clinical biochemistry.

Biochemistry Illustrated

Peter N. Campbell and Anthony D. Smith

1981 216 pages 154 2-colour line, 112 1-colour line and 6 half-tone illus Paper £8.50 approx.

Scheduled for September publication

An exciting new textbook designed to meet the needs of all students of biochemistry who find this complex and detailed subject difficult to understand.

Therapeutic Drug Monitoring

Edited by Alan Richens and Vincent Marks

1981 736 pages 101 line and 2 half-tone illus hardback £20.00 approx.
ISBN 0 443 02162 7

The first major work devoted exclusively to therapeutic drug monitoring – one of the fastest growing areas in clinical medicine.

Nutrition of Man

Edited by J. C. Waterlow

1981 104 pages illus paperback
£9.50 ISBN 0 443 02449 9

Contains the most up-to-date information available on current nutritional research being carried out in centres all over the world.

Control of Growth

Edited by J. M. Tanner

1981 104 pages illus paperback
£9.50 ISBN 0 443 02526 6

Covers the main areas of current investigation into controlling the growth and development of a child – cell multiplication; the factors involved in fetal growth and post-natal development; the importance of hormones and abnormalities of growth mechanisms.

The Expression of Eukaryotic Viral and Cellular Genes

edited by Ralf F. Petterson,
Leevi Kaariainen, Hans Soderlund
and Nils Oker-Blom

August/September, xii + 324pp., 0.12.553120.6
£20.40 (UK only) / \$ 49.00

Expression of Eukaryotic Viral and Cellular Genes stresses the importance of recombinant DNA techniques and the use of animal viruses as excellent models for studying the structure and expression of genes. Indeed, much of the current knowledge in certain areas of molecular biology comes from experiments carried out with viruses. It contains recent important papers by some of the most prominent molecular biologists in the world.

BIOCHEMICAL NOMENCLATURE

AND

RELATED DOCUMENTS

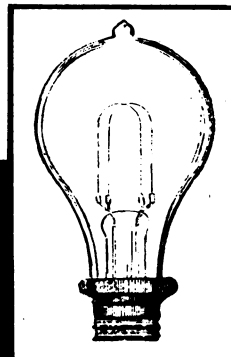

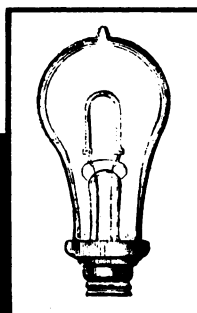

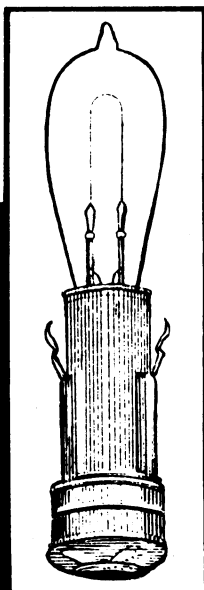

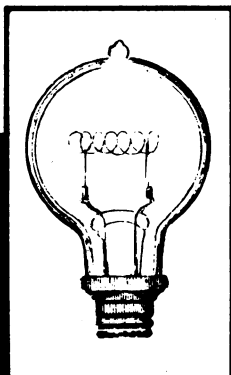

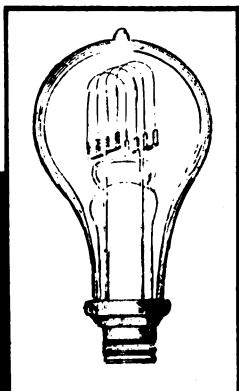

This compendium, previously published under the title of *Collected Tentative Rules and Recommendations of the Commission on Biochemical Nomenclature* has now been updated and published in its third edition for the International Union of Biochemistry by the Biochemical Society under the title: *Biochemical Nomenclature and Related Documents*.

The compendium, prepared by the IUB Committee of Editors of Biochemical Journals, collects together all the current rules and recommendations on nomenclature that have emanated from the IUPAC-IUB and IUB nomenclature committees. As such it is an indispensable part of the library of all biochemists.

The price is £3.50/US\$7.00, postage-paid (vi plus 223 pages, paper bound). A 20% discount is allowable on orders for 10 or more copies to a single address. Payment must accompany the order.

The Light Programme!

new bioluminescence products from Boehringer Mannheim

ATP-CLS

(Constant Light Signal)
Test Combination for the
measurement of ATP
consuming or producing
reactions. Limit of
sensitivity 2.5×10^{-11} mol/l.

ATP-HS

(High Sensitivity) This Test
Pack contains extremely
pure reagents with ultra low
residual ATP content which
gives you high sensitivity
down to 5×10^{-13} mol/l.

NAD(P)H

Test Combination for
the measurement of
NAD(P)H by the
photobacterium luciferase
method in the range 10^{-7}
to 10^{-9} mol/l.

Each Test Pack contains performance tested reagents
which are ready to use. You can therefore execute the test
quickly, easily and without reagent wastage.
