BIOSCIENCE REPORTS is a new international monthly journal devoted to the rapid publication of high-quality papers that advance new concepts in the areas of molecular and cellular biology. Review articles and other topical material will be included from time to time.

Hon. Advisory Editors: A. KORNBERG
R. R. PORTER
F. SANGER

Board of Editors: Chairman: C. A. PASTERNAK (U.K.)
Deputy Chairman: K. A. PIEZ (U.S.A.)

R. A. BRADSHAW (U.S.A.)
W. J. BRAMMAR (U.K.)
G. H. DIXON (Canada)
R. F. DOOLITTLE (U.S.A.)
A. A. EDDY (U.K.)
D. M. ENGELMAN (U.S.A.)
J. R. GRIFFITHS (U.K.)
F. W. HEMMING (U.K.)
H.-D. KLENK (Germany)

E. LAZARIDES (U.S.A.)
W. J. LENNARZ (U.S.A.)
H. J. MULLER-EBERHARD (U.S.A.)
V. MUTT (Sweden)
A. PETERKOFSKY (U.S.A.)
P.-P. SLONIMSKI (France)
R. J. P. WILLIAMS (U.K.)
A. R. WILLIAMSON (U.K.)

Publication Details
ISSN 0144-8463
Monthly, starting January 1981. There will be one volume per year.

Subscription Rate
1 year £85.00 US$191.00
Per part £8.00 US$ 18.00
Despatched by Air Mail

Call for Papers
Short reports of original research, of sufficient interest and significance to justify rapid publication, in all areas of biochemistry can be submitted directly to any member of the Board of Editors. Publication will be within approximately 2 months of receipt. Instructions to authors for Bioscience Reports with the addresses of all Editors are available from The Biochemical Society, 7 Warwick Court, London WC1R 5DP.

Mobility and Migration of Biological Molecules

Edited by P. B. GARLAND and R. J. P. WILLIAMS

Mobility and Migration of Biological Molecules was the title of the Biochemical Society's Forty-sixth Symposium held in London in December 1980. The fifteen papers presented by leading biochemists involved in research studies of molecular movement are now published in this book. In particular, the aspects of intramolecular movements of proteins, movements of ions and reaction intermediates in proteins (including the structure and function of ion channels), rotational and lateral movements in biomembranes and movements of proteins across membranes are discussed in detail. Mobility and Migration of Biological Molecules offers the specialist a valuable review of the existing state of knowledge and useful signposts for the directions further research must take.

275 pp. ISBN 0 904498 13 1 £25.00 (US$57.50)

Writing a Scientific Paper & Speaking at Scientific Meetings

By Vernon Booth

To the newly revised and amplified fifth edition of Writing a Scientific Paper, the author has added the companion essay on Speaking at Scientific Meetings. Widely praised in its earlier editions, this concise compendium of advice is expected to receive renewed acclaim. By both the first-time writers of scientific papers and the alert 'old hand' it will be found of the greatest help in avoiding faults in writing and presenting papers.

Soft cover 48 pp. £2.50 (US$6.00)

NMR Shift Reagents

General Applications
Aldrich offers a variety of reagents for simplifying the interpretation of complex NMR spectra. The paramagnetic lanthanide β-diketonates (1-4), for example, have been widely used for the determination of molecular configuration, conformation, and stereochimistry in solution, analysis of organometallic compounds and polymers; estimation of coupling constants; study of isotope effects and kinetics; and determination of functional group basicity.

The optically active shift reagents (3-5) are extremely useful for the NMR assay of enantiomeric composition. A major advantage of using the NMR technique over polarimetric methods is that small quantities of optically active impurities do not interfere in the former assay. Also, there is no need to reference an external standard of enantiomeric purity using the NMR method. In addition to the chiral lanthanide reagents listed at right are the two enantioselective solvating agents 5a and 5b. These chiral alcohols have been used for the determination of optical purity and, in certain cases, the absolute configuration of a wide range of organic molecules.

Choosing a Shift Reagent
Selecting the most effective lanthanide shift reagent for a particular problem often requires trial and error, although some guidelines can be followed. For example, the Eu and Yb complexes usually induce downfield proton NMR shifts, whereas those of Pr and Dy induce upfield shifts. The Yb and Dy shift reagents have been recommended for use in 13C, 15N, and 19F NMR experiments.

The fod4 reagents (2) are generally more soluble in nonpolar NMR solvents and induce greater shifts than their thd (1) counterparts (however, sometimes a choice must be made between the extent of shifting and the signal broadening that usually accompanies it). There is evidence that the fod complexes are more stable to carboxylic acids and phenols than the corresponding thd chelates.

Although the more-acidic fod reagents are valuable for studying compounds having weakly nucleophilic functional groups, the thd derivatives bind more selectively and may be more useful for substrates having several different functional groups. The combination of reagents Ag(fod)2 (2d) and Yb(fod)3 (2c) was recently found to be effective for shifting resonances of such weakly nucleophilic compounds as aromatics, olefins, phosphines, and halogenated compounds.

Aldrich has a shift reagent for all your NMR needs!

1a, M=Eu:
Resolve-AL™, 99+%, GOLD LABEL [Eu(thd)3]tris[2,2,6,6-tetramethyl-3,5-heptanedionato]-
Europium] 15,897-3 1g $11.90; 5g $54.00

1b, M=Dy:
Resolve-AL Dy™, 99+%, GOLD LABEL [Dy(thd)3](tris[2,2,6,6-tetramethyl-3,5-heptanedionato]-
dysprosium] 18,273-6 1g $14.80

1c, M=Pr:
Resolve-AL Pr™, 99+%, GOLD LABEL [Pr(thd)3](tris[2,2,6,6-tetramethyl-3,5-heptanedionato]-
praseodymium] 18,088-1 1g $11.90

1d, M=Yb:
Resolve-AL Yb™, 99+%, GOLD LABEL [Yb(thd)3](tris[2,2,6,6-tetramethyl-3,5-heptanedionato]-
ytterbium] 16,275-2 1g $14.30

2a, M=Eu, n=3:
Resolve-AL EuFOD™, 99+%, GOLD LABEL [Eu(fod)3] Sievers’ Reagent, tris[6,7,7,8,8,8-
heptafluoro-2,2-dimethyl-3,5-octanedionato]-europium] 16,025-8 100mg $3.00; 1g $11.90

2b, M=Pr, n=3:
Resolve-AL PrFOD™, 99+%, GOLD LABEL [Pr(fod)3] Rondouze’s Reagent, tris[6,7,7,8,8,8-
heptafluoro-2,2-dimethyl-3,5-octanedionato]praseodymium] 16,135-7 1g $11.90

2c, M=Yb, n=3:
Resolve-AL YbFOD™, 99+%, GOLD LABEL [Yb(fod)3] Rondouze’s Reagent, tris[6,7,7,8,8,8-
heptafluoro-2,2-dimethyl-3,5-octanedionato]ytterbium] 22,583-5 1g $19.50; 5g $48.40

2d, M=Ag, n=1:
Resolve-AL AgFOD™, 99+%, GOLD LABEL [Ag(fod)3] tris[6,7,7,8,8,8-heptafluoro-2,2-
dimethyl-3,5-octanedionato]silver] 22,466-9 1g $15.00; 5g $47.50

3: Tris[3-(heptafluoropropylhydroxymethylene)-d-
camphorato], europium(III) derivative, 99+%,
GOLD LABEL [Eu(fhc)3] 16,474-7 1g $17.50
5g $56.00

Licensed under U.S. Patents 3,700,410 (to Sievers), 3,789,060 and 3,915,841 (to Goering et al.)

4a, M=Eu:
Resolve-AL Tris[3-(trifluoromethylhydroxymethylene)-d-
camphorato], europium(III) derivative [Eu(fhc)3] 17,649-4 100mg $4.70; 1g $18.70
5g $74.00

4b, M=Pr:
Resolve-AL Tris[3-(trifluoromethylhydroxymethylene)-d-
camphorato], praseodymium(III) derivative [Pr(fhc)3] 17,770-9 1g $18.50; 5g $72.00

5a, (+) isomer:
(++)-2,2-Trifluoro-1-(9-anthryl)ethanol, 99+% [tris(trifluoromethyl)-9-anthracenemethanol] 21,134-4 100mg $6.25; 1g $24.70

5b, (-) isomer:
(-)-2,2-Trifluoro-1-(9-anthryl)ethanol, 99+% [tris(trifluoromethyl)-9-anthracenemethanol] 21,134-5 100mg $6.25; 1g $24.70

*Licensed for use under Sievers’ U.S. Patent 3,700,410
