BIOTECHNOLOGY

Edited by C. F. PHELPS and P. H. CLARKE

The fourteen contributions forming this volume were presented at a London meeting of the Biochemical Society including the Society’s Forty-Eighth Symposium ‘Biotechnology’, in December 1982. With today’s increasing pressures to develop latest laboratory findings into practical industrial processes as quickly as possible the chosen theme of this Symposium was a timely one. The papers represent up-to-date reports from international biochemists whose work is of direct relevance to the wide areas of interests concerned with biotechnology, together with glimpses of the early development of its techniques and a look at its exciting future.

Boehringer Mannheim are extending their range of restriction enzymes and buffers

A new book "Biochemicals for Molecular Biology" presents information on our range of products for the Molecular Biologist. We will send a copy to you on request.

Boehringer Mannheim's range of buffers is expanding too. Each one undergoes the highest standard of purification and quality control to provide you with a reliable yet economical preparation. Tris, for example, is notable for its low level of heavy metal contamination, whilst Hepes is suitable as a cell culture buffer since it is function tested for cell growth.
