Messenger RNA and Ribosomes in Protein Synthesis

Edited by C. F. PHELPS and H. R. V. ARNSTEIN

The Biochemical Society's Forty-Seventh Symposium, held in London in December 1981, assembled some of the leading workers in this area of biochemistry. The subjects for discussion were chosen for their timeliness and distinctiveness, and included accounts of ribosome and messenger RNA structure and function, initiation factors, caps and ribonucleoproteins, as well as consideration of the processes leading to the distribution of newly synthesized proteins within the cell. The papers presented are now published in this volume.

ANNOUNCEMENT
STEROID REFERENCE COLLECTION

The Steroid Reference Collection, which is maintained by the U.K. Medical Research Council and the U.S. National Institute of Arthritis and Metabolic Diseases, N.I.H., provides milligram or microgram samples of reference steroids free of charge for use in clinical or biochemical studies, including the development and standardization of micro-assays, chromatography, and mass spectrometry. The Collection also offers assistance with chemical problems involving steroids, and an n.m.r. service (1H and 13C) for the identification of steroids.

Recent donations of samples from eminent scientists and from the pharmaceutical industry, as well as syntheses in our laboratories, have expanded the Collection to over 4000 different compounds, including steroid hormones and their metabolites, sterols, bile acids, and commercial synthetic analogues of the steroid hormones.

Enquiries, requests for information, lists of available steroids, or offers of samples for the Collection, should be addressed to:

Professor D. N. Kirk,  
Curator of the Steroid Reference Collection,  
Chemistry Department,  
Westfield College,  
Hampstead,  
London, NW3 7ST

Workers in the U.S.A., however, are asked to address enquiries or requests to: Dr. D. F. Johnson, Building 4, Room 141, National Institutes of Health, Bethesda, Maryland 20014, U.S.A.
BIOTECHNOLOGY

Edited by C. F. PHELPS
and P. H. CLARKE

The fourteen contributions forming this volume were presented at a London meeting of the Biochemical Society including the Society's Forty-Eighth Symposium 'Biotechnology', in December 1982. With today's increasing pressures to develop latest laboratory findings into practical industrial processes as quickly as possible the chosen theme of this Symposium was a timely one. The papers represent up-to-date reports from international biochemists whose work is of direct relevance to the wide areas of interests concerned with biotechnology, together with glimpses of the early development of its techniques and a look at its exciting future.
