THE BIOCHEMICAL SOCIETY

The Biochemical Society exists to advance the science of biochemistry through meetings and publications. Several meetings a year are held, each at a different place; original papers are presented and special topics are discussed at symposia and colloquia.

OFFICERS AND COMMITTEE: 1986–1987

Chairman
H. M. Keir, F.R.S.E.

Committee
H. Baum
R. B. Beechey
R. J. Beynon
E. D. Saggerson
P. G. Strange
I. P. Trayer
E. J. Wood

Treasurer
B. Spencer

D. N. Brindley
A. Crafts-Lighty
J. De Bellerocbe

General Secretary
R. H. Burdon, F.R.S.E.

S. Doonan
D. Fisher†
L. A. Fothergill-Gilmore
G. G. Lunt

Meetings Secretary
A. D. B. Malcolm

M. J. Morgan
C. I. Pogson††

* Ex officio Member of Committee
† Representative of Group Secretaries
†† Representative of Editorial Board of the Biochemical Journal

Executive Secretary: G. D. Jones (7 Warwick Court, London WC1R 5DP)

Persons interested in biochemistry are eligible for election as Members. Details of further facilities accorded to Members, and forms of application for membership, are available from the Executive Secretary, The Biochemical Society, 7 Warwick Court, London WC1R 5DP [01-242 1076 (4 lines)].

Genes and Proteins in Immunity

Traditionally, the multiplicity of the reactions involved in immune responses have been a source of excitement to some and yet frustration to many. However, with the advent of modern techniques in molecular biology, a considerable understanding of these complexities has begun to emerge. In recognition of the enormous contribution made to this field by Rodney Porter, the Biochemical Society held a special symposium in his honour in Oxford during July 1985. This volume contains the papers that were presented in tribute at the symposium.

Falling-film distillation head (A)

With 24/40 joints.
Center finger is 2.2 x 21cm.
Offers a safe alternative for the distillation of heat-sensitive compounds and mixtures that contain high-boiling impurities, at atmospheric or reduced pressure. A complete set-up is pictured at right (B).

Technical Information Bulletin No. AL-160 describes the use of the apparatus.

Büchi Rotavapor connector

With 24/40 joint and 35/20 socket joint.

Allows easy removal of solvent from reservoir without repeated interruption of vacuum.

Thermometer adapter

7mm, 24/40 joint. For 6-mm-o.d. thermometer.

Allows full view of thermometer scale regardless of immersion depth; portions of the scale are not obscured as with bushing-and-adapter types. Not recommended for vacuum use.

Mercury bubbler

24/40 joint.

Enables increased pressure within reaction vessels, thus allowing solvents to boil at higher temperatures. Internal reservoirs prevent the mercury from being drawn into the reaction flask or pushed out of the bubbler.

Septum-inlet adapters

With 24/40 joints.

Similar to those described on page 1587 in our 1986-1987 Catalog/Handbook, but for use with medium wall tubing, 14mm i.d.

Lily tube

305mm long, 35mm at widest point.
A convenient substitute for a separatory funnel for removal of the top layer of a two-phase system under vacuum. Flared tip allows last traces to be skimmed from the surface of the bottom layer.
