Genes and Proteins in Immunity

Traditionally, the multiplicity of the reactions involved in immune responses have been a source of excitement to some and yet frustration to many. However, with the advent of modern techniques in molecular biology, a considerable understanding of these complexities has begun to emerge. In recognition of the enormous contribution made to this field by Rodney Porter, the Biochemical Society held a special symposium in his honour in Oxford during July 1985. This volume contains the papers that were presented in tribute at the symposium.

EDITED BY J. KAY, M. A. KERR, A. F. WILLIAMS AND K. B. M. REID

Order from THE BIOCHEMICAL SOCIETY BOOK DEPOT PO Box 32, Commerce Way, Colchester CO2 8HP, Essex, U.K.
Biochemical Tools

Reagent for Amino Acid Protection-Activation

![Structure of Reagent for Amino Acid Protection-Activation]

Used for the synchronous protection of the amino moieties and activation of the carboxyl group of amino acids.

31.753-5 9-Fluorenylmethyl pentfluoro-phenyl carbonate, 98%
1g $12.50; 5g $41.00

Phenyl Isothiocyanate for Protein Sequencing

![Structure of Phenyl Isothiocyanate]

31.786-1 Phenyl isothiocyanate, suitable for protein sequencing, 99%
1g $8.00
5g $20.00

Macroyclic Ligands

![Structures of Macroyclic Ligands]

Potentially useful models of certain biological systems and possible reagents for complexometric titrations with high cation-binding selectivity.

31.130-8 1,4,7-Triazacyclononane, 97%
(1) 100mg $17.50; 500mg $58.00
(2) 100mg $19.25; 500mg $64.00

31.129-4 1,4,7-Trimethyl-1,4,7-triaza-cyclononane, 99%
(2) 100mg $19.25; 500mg $64.00

Biological Stain

![Structure of Biological Stain]

Used for supravital staining of lymphocyte mitochondria.

30.750-5 Methylene Violet 3RA
1g $7.50; 5g $25.00

Nonionic Detergents

![Structure of Nonionic Detergent]

1-Octyl-β-D-glucopyranoside (1) is a nonionic, dialyzable detergent well known for the solubilization of membrane proteins.

1-S-Octyl-β-D-thioglycoside (2) is a new detergent similar to 1 but with several improved properties. The critical micelle concentration is 9mM compared to 23-25mM for the oxygen analog. 1-3, 4, 11-2 is less susceptible to hydrolytic cleavage so it is useful at a wider pH range and can be stored in aqueous solution in the cold.2, 3, 4

36.193-6 1-Octyl-β-D-glucopyranoside, 98%
(1) 250mg $10.95; 1g $30.85
(2) 250mg $12.00; 1g $20.00

Gel-Chromatographic Reagent

![Structure of Gel-Chromatographic Reagent]

2-Fluoro-1-methylpyridinium 3-toluene-sulfonate activates hydroxyl groups on polysaccharide gels employing Mukaiyama technology. The activated gel can be coupled directly with amino or sulfhydryl groups in aqueous solution (pH 8-9) or in organic solvents, or it can be stored for at least 4 months at 4°C in 2mM HCl. The activated gel can be used in affinity chromatography, covalent chromatography or for reversible immobilization of enzymes.

24.955-6 2-Fluoro-1-methylpyridinium 3-toluene-sulfonate, 95%
1g $11.05
5g $35.60

1,4-Pentadien-3-ol

Starting material for the synthesis of the didexy sugars β-d-tigoxose and β-d-tigolose via Sharpless epoxidation.

32.463-3 1,4-Pentadien-3-ol, 99%
5g $21.00; 25g $56.50
