The Biochemical Society exists to advance the science of biochemistry through meetings and publications. Several meetings a year are held, each at a different place; original papers are presented and special topics are discussed at symposia and colloquia.

**Chairman**
H. M. Keir, F.R.S.E.

**Committee**
H. Baum*§
R. J. Beynon
D. N. Brindley
C. J. Coulsen
A. Crafts-Lighty
J. De Belleroca
S. Doonan
D. Fisher†
R. B. Freedman
G. G. Lunt
M. J. Morgan
L. J. Rogers

E. D. Saggerson
P. G. Strange
I. P. Trayer
A. J. Turner†*
R. T. Walker

* Ex officio Member of Committee
† Representative of Group Secretaries
† Representative of Editorial Board of the Biochemical Journal
§ Representative of Professional and Educational Committee

**Meetings Secretary**
A. D. B. Malcolm

**Publications Secretary**
C. I. Pogson

Executive Secretary: G. D. Jones (7 Warwick Court, London WC1R 5DP)

Persons interested in biochemistry are eligible for election as Members. Details of further facilities accorded to Members, and forms of application for membership, are available from the Executive Secretary, The Biochemical Society, 7 Warwick Court, London WC1R 5DP [01-242 1076 (4 lines)].

Chiral Amino Alcohols

Optically active β-amino alcohols (1 and 2) have been used extensively during the past ten years in a variety of important chemical applications. Aldrich offers several of these useful products in high chemical and optical purity. Some recent examples, which only touch on the tremendous potential of these important chiral reagents, are described below.

Meyers employed 2b as a chiral auxiliary in the key step of the total synthesis of the sesquiterpene (-)-α-cuparenone (3) (eq. 1).1

Chiral aziridines have been prepared under mild and neutral conditions in excellent yields (eq. 2).2

Brown has used (S)-(+) -pyrrolidinemethanol (4) to enhance the % ee in the asymmetric hydroboration of certain olefins with disopinocampherylborane (1-pc-BH).2,4

Chiral β-amino alcohols have been used to prepare asymmetric organotin enamines which react with electrophilic alkenes to afford optically active α-substituted cyclohexanones (eq. 4).1

Borane-THF was modified by reaction with optically active amino alcohols on polymer supports and the resulting reagents (5) have been used to reduce prochiral ketones with good asymmetric induction (eq. 5).1
