COUMARINS

Coumarins, chromones and chromanones comprise an important class of heterocyclic compounds which finds varied applications in chemistry. Coumarins have been used as fluorescent labels over the past several decades¹⁻³ for such substrates as carboxylic acids,⁴ surfactants⁵ and enzymes.^{6,7} They have also found utility in the synthesis of medically important compounds¹⁰⁻¹² and in organic synthesis.¹³ Listed below are some of these important compounds which are available from Aldrich. For a complete listing of these products, by class, please contact our Technical Services Department at 800-231-8327.
