The BIOCHEMICAL JOURNAL

REVIEWS 1989

Edited by P. J. England

The Biochemical Journal has published reviews on broad topics of general interest to biochemists and scientists in related disciplines since 1982. These reviews have proved extremely successful and popular (one classic review was one of the most-cited papers of the last decade) and with the aim of making them readily available even to those who do not subscribe to the journal it was decided to produce an annual compilation of all the reviews published in the previous year. This is the first such volume. The 23 reviews published in 1989 covered a wide range of molecular and cellular biochemistry, from fundamental chemical enzymology via the intricacies of signal transduction mechanisms through to cell biology and whole-animal metabolism. Biochemical Journal reviews are intended for research scientists, but are written in such a way as to be intelligible to the non-specialist who wishes to learn about progress in other areas. They are thus ideally suited as material both for teaching staff and for senior students.

Contents:

ISBN 1 85578 000 3 262 pp. £15.00/US$25.00

Order from: Portland Press, Commerce Way, Colchester CO2 8HP, U.K., or with credit card by telephone (0206 46351) or fax (0206 549331)

The Biochemical Journal is published by Portland Press on behalf of the Biochemical Society
GENE EXPRESSION
— Regulation at the RNA and Protein Levels

Edited by J. Kay, F.J. Ballard and R. J. Mayer

BIOCHEMICAL SOCIETY SYMPOSIUM NO. 55
204 pp. ISBN 0 904498 24 7 Price £35 (US $65)

List of contents and authors: Gene Expression and Differentiation in F9 Mouse Embryonal Carcinoma by Merilyn J. Sleigh; Regulation of Genes Associated with Drug Metabolism by William H. Elliott, Brian K. May, Michael J. Bawden & Antony J. Hansen; Cloning and Expression of the Genes for Calpains and Calpastatins by Takashi Murachi, Emiko Takano, Masatoshi Maki, Yoshifumi Adachi & Masakazu Hatanaka; Peptide Signals for Protein Degradation within Lysosomes by J. Fred Dice & Hui-Ling Chiang; Haemopoietic Growth Factor Control of Normal and Neoplastic Cellular Proliferation by Antony W. Burgess, Jonathan Cebron & Sandra Smith; Nuclear Pre-mRNA Splicing in Saccharomyces cerevisiae by Jean Beggs, Marie Lossky & Gordon J. Anderson; Control of mRNA Stability During Development of Dictyostelium discoideum by Giorgio Mangiarotti; Effects of Insulin-Like Growth Factors on Protein Metabolism: Why are some Molecular Variants more Potent? by F. John Ballard, Geoffrey L. Francis, Christopher J. Bagley, Laszlo Szabo & J. C. Wallace; Hormonal Regulation of Gene Expression by John W. Funder; Mechanisms by which Prolactin and Glucocorticoids Regulate Casein Gene Expression by Jeffrey M. Rosen, Patrick Peyt, Heather Goodman & Kuo-Fen Lee; Processing of the Polymeric Immunoglobulin Receptor by Roberto Solari, Esther Schaerer, Corinne Tallichet, Liliane Racine & Jean-Pierre Krachemehle; Experimental Characterization of the Autophagic – Lysosomal Pathway in Isolated Rat Hepatocytes by Paul B. Gordon, Gunn Ø. Kisen, Attila L. Kovacs & Per O. Seglen; The Molecular Chaperone Concept by R. John Ellis, Saskia M. Van Der Vies & Sean M. Hemmingsen; Protein Folding and Intracellular Transport: Studies on Influenza Virus Haemagglutinin by Mary-Jane Gething & Joe Sambrook; Role of Protein Disulphide-Isomerase in the Expression of Native Proteins by Robert B. Freedman, Neil J. Bulleid, Hilary C. Hawkins & Jan. L. Paver; Intermediate Filament–Ubiquitin Diseases: Implications for Cell Sanitization by R. John Mayer, James Lowe, Graham Lennox, Michael Landon, Ken MacLennan & Fergus J. Doherty; Subject index.
Desktop Molecular Modeller

A new, powerful, simple-to-use 3-D molecular-modelling and editing program for teaching and research.

Designed by Dr. James Crabbe of the University of Oxford and Dr. John Appleyard of Polyhedron Software Ltd. for use in a wide range of science disciplines requiring molecular construction.

Important features:
- Display molecules of up to 1,500 atoms in six different styles: quick-fill, space-fill, ball-and-stick, monochrome, color and stereo-line.
- Manipulate and edit bonds and structures.
- Project structures along bonds or onto planes.
- Validate new structures—check bond lengths, angles and van der Waals radii or execute energy-minimization routines.
- Make color plots on HP plotters or export files to Desktop Publishing programs.
- Utilize the slide-show capability to generate sequences of images for displays and demonstrations.

System requirements:
- IBM® PC, PC-XT®, PC-AT® and PS/2® computers · 512K RAM · hard disk or dual floppy disk drives · DOS version 2.0 or higher · IBM® CGA, EGA, VGA or Hercules™ graphics adapters · Microsoft® mouse and math co-processor (supported but not required).

Z20,350-5 Desktop Molecular Modeller, $495.00
by J.C. Crabbe and J.R. Appleyard
(supplied on 5¼- and 3½-in. diskettes; includes reference manual)
