Nutrient Regulation of Insulin Secretion

edited by P. R. Flatt

ISBN 1 85578 004 6

The mechanism of insulin release in response to the body's intake of nutrients is a problem at the centre of research into diabetes. Nutrient Regulation of Insulin Secretion is a comprehensive review of the mechanisms by which nutrients, such as glucose, and neurohormonal stimuli generated by feeding, control pancreatic B-cell function in health and disease.

Contents
Insulin secretion and the entero-insular axis L.M. Morgan
Role of classical and peptidergic neurotransmitters in insulin secretion J.J. Holst
Intra-islet interactions V. Marks, E. Samols and J. Stagner
Biosynthesis of insulin secretory granule proteins P.C. Guest and J.C. Hutton
Regulation of insulin secretion by nutrients: the fuel concept W.J. Malaisse
Glucokinase: signal recognition enzyme for glucose-induced insulin secretion S. Lenzen
Phospholipids and insulin secretion N. G. Morgan and W. Montague
Intracellular pH and B-cell function L. Best
Regulation of K⁺ permeability and membrane potential in insulin-secreting cells J.-C. Henquin, A. Debuyser, G. Drews and T. D. Plant
Ion channels involved in the regulation of nutrient-stimulated insulin secretion F. M. Ashcroft, B. Williams, P. A. Smith and C. M. S. Fewtrell
Cytoplasmic calcium and insulin secretion B. Hellman, E. Gylfe, E. Grapengiesser, R.-E. Lund and A. Marcatròm
The role of protein kinase C in insulin secretion S. J. Persaud, P.M. Jones and S.L. Howell
Cyclic AMP, protein phosphorylation and insulin secretion S. J. Hughes and S.J.H. Ashcroft
Molecular mechanisms of sulphphonyurea action in the pancreatic B-cell D.A. Nelson, L. Aguilar-Bryan, H. Raaf and A.E. Boyd III
Mechanisms of destruction of insulin-secreting cells H. Okamoto

Copies of Nutrient Regulation of Insulin Secretion (price £90.00/US$111.00) can be ordered from Portland Press at the address below. Payment should accompany order and can be made by cheque or credit card.

Essays in Biochemistry is one of the most popular series of books created by the Biochemical Society. First started in 1965, and until recently published by Academic Press, the Society has now entrusted its publication to Portland Press. The series has undergone extensive revision to restore its relevance for its primary audience - advanced undergraduates, graduate students and their teachers.

Essays in Biochemistry will be published annually at the start of each academic year. Each volume will cover exciting and rapidly developing areas of biochemistry and molecular and cellular biology of particular interest to students and their teachers. Carefully selected bibliographies provide a lead in to the primary literature, helping readers pursue topics in greater depth.

Contents

The biochemistry of memory Steven P. R. Rose
Tubulin and microtubules Edward H. Byard and Bodo M.H. Lange
Plant signal perception and transduction: the role of the phosphoinositide system Bjørn K. Drabak
Artificial cell adhesive proteins Kiyotoshi Sekiguchi, Toshinaga Maeda and Koiti Titani
The urea cycle: a two compartment system Malcolm Watford
Antibody engineering: an overview Richard O’Kennedy and Paul Roben
Ecstasy: towards an understanding of the biochemical basis of the actions of MDMA Marcus Rattray
Structure and function of ribonuclease A binding subsites Xavier Parés, M. Víctoría Nogués, Rafael de Llorens and Claudi M.Cuchillo
Metabolic studies using 13C nuclear magnetic resonance spectroscopy Ronnítte Badar-Goffier and Herman Bachelard

Two review compendia from Portland Press

Biochemical Journal Reviews Compendium 1991

This invaluable compendium contains the review articles published in the Biochemical Journal in 1991. The reviews cover a wide range of modern biochemistry and molecular biology and provide the opportunity for research workers to gain an overview of areas outside their own particular speciality.

The compilation is also an important source of teaching material. The use of colour in diagrams allows the particularly clear presentation of complex topics, and enhances this book's value as a teaching aid.

The reviews fall into five sections covering:

* Gene structure and expression
* Cell biology and development
* Proteins
* Membranes and bioenergetics
* Regulation of metabolism

Areas reviewed include: pulmonary surfactant proteins, adenovirus oncoproteins, protein-DNA recognition, transcription factors, regulation of gene expression by insulin, glycosylation mutants and protein transport, dioxin toxicity, interaction of ribosomes and the cytoskeleton, muscle contraction, blood coagulation and the complement system, caldesmon, ras proteins, magnetic resonance of membranes, regulation of muscle protein turnover and control of heart ATP synthesis.

"It provides a valuable teaching aid at a reasonable cost over quite a wide range of biochemistry and molecular biology." - Biochemical Education

Casebound ISBN 1 85578 020 8, 240 pages price £12.50/US$25.00

Journal of Biological Chemistry Minireview Compendium 1991

The Journal of Biological Chemistry is one of the world's leading journals of biological chemistry; it publishes over 1000 research articles each year. It also publishes review articles on selected topics of scientific importance. This is the compendium of reviews published during 1991. The 36 reviews published in 1991 covered a wide range of topics and will supply invaluable material for lecturers and students.

Topics reviewed include: protein structure of actin, HNF-1, cytoplasmic transcription system encoded by vaccinia virus, metal-catalyzed oxidation of proteins, the interleukin-2 receptor, antigenic structures recognized by cytotoxic T lymphocytes, the cholinesterases, lipid activation of protein kinase C, homologous pairing and strand exchange driven by RecA protein, phosphorylation of ribosomal protein S6, DNA topoisomerases, tumor necrosis factor, three proteolytic systems in yeast, protein N-myristoylation, nitrogenases, cytochrome P-450, visual excitation and recovery, calmodulin fluorescence spectroscopy, caldesmon, adhesive recognition sequences, protein phosphorylation, SPARC, tenascin and thrombospondin, selenocysteine-containing enzymes, aminoacyl-tRNA synthetases, DNA polymerase III helicosome, molecular genetics of Alzheimer disease amyloid, lysosomal membrane glycoproteins, conotoxins, and CD 45.

Paperback ISBN 0 9621688 03 1, 152 pages, £6.00/US$10.00
