Compendium of Biochemical Nomenclature and Related Documents

Published for the International Union of Biochemistry and Molecular Biology by Portland Press

Edited by C Liébecq

This is an essential reference text for all authors and editors in biochemistry and related disciplines. It contains all the current recommendations on nomenclature issued by the nomenclature committees of the International Union of Biochemistry. It also includes text from, and references to, other important nomenclature documents.

The book's main sections cover: amino acids, peptides and proteins; enzymes; nucleotides, nucleic acids and protein synthesis; carbohydrates; and lipids. There are also articles covering the nomenclatures of organic chemistry, isotopically modified compounds, phosphorus-containing compounds, folic acids, vitamin B6, corrinoids and tetrapyrroles; as well as the presentation of thermodynamic data.

Contents

General - Nomenclature of organic chemistry: stereochemistry; Nomenclature of organic chemistry: natural products and related compounds; Isotopically modified compounds and isotopically labelled compounds; Recommendations for the presentation of thermodynamic and related data in biology; Citation of bibliographic references in biochemical journals.

Amino acids, peptides and proteins - Nomenclature and symbolism for amino acids and peptides; Abbreviated nomenclature of synthetic polyptides - Polymerized amino acids; Abbreviations and symbols for the description of the conformation of polypeptide chains; Nomenclature of peptide hormones; Nomenclature of glycoproteins, glycopeptides and peptidoglycans; Nomenclature of initiation, elongation and termination factors for translation in eukaryotes.

Enzymes - Nomenclature of multiple forms of enzymes; Symbolism and terminology in enzyme kinetics; Nomenclature for multienzymes.

Nucleotides, nucleic acids and protein synthesis - Abbreviations and symbols for nucleic acids, polynucleotides and their constituents; Abbreviations and symbols for the description of the conformations of polynucleotide chains; Nomenclature for incompletely specified bases in nucleic acid sequences; Nomenclature of initiation, elongation and termination factors for translation in eukaryotes.

Carbohydrates, etc. - Carbohydrate nomenclature; Nomenclature of cyclitols; Numbering of atoms in myo-inositol; Conformational nomenclature for five- and six-membered ring forms of monosaccharides and their derivatives; Nomenclature of unsaturated monosaccharides; Nomenclature of branched-chain monosaccharides; Abbreviated terminology of oligosaccharide chains; Polysaccharide nomenclature; Symbols for specifying the conformation of polysaccharide chains; Nomenclature of glycoproteins, glycopeptides and peptidoglycans.

Lipids, etc. - Nomenclature of lipids; Nomenclature of steroids; Nomenclature of quinones with isoprenoid side chains; Nomenclature of carotenoids and amendments; Nomenclature of tocopherols and related compounds; Nomenclature of vitamin D; Nomenclature of retinoids; Prenol nomenclature.

Miscellaneous - Nomenclature of phosphorus-containing compounds of biochemical importance; Nomenclature and symbols for folic acids and related compounds; Nomenclature for vitamins B-6 and related compounds; Nomenclature of corrinoids; Nomenclature of tetrapyrroles. Excerpts from the newsletters of the nomenclature committees of the International Union of Biochemistry (ICBN and NC-IUB); Journals and other documents of biochemical nomenclature.

**Structural and Dynamic Properties of Lipids and Membranes**

Edited by P J Quinn and R J Cherry  
*Portland Press Research Monograph Series No. 3*

The biophysical approach for characterizing the properties of biological membranes and their constituents has proved invaluable. This book provides an account of the application of a range of biophysical methods to characterize the structure of lipids and membranes. As a result of such studies, we have a much clearer conception of the dynamic nature of cell membranes.

ISBN 1 85578 014 3 Hardback  £42.50/US$80.00  235 pages  December 1992

**The Annexins**

Edited by S E Moss  
*Portland Press Research Monograph Series No. 2*

Calcium has long been recognized as playing a central role in the regulation of many physiological processes. In the past few years, a major class of calcium-binding proteins has emerged, that lacks the standard 'EF-hand' motif, binding instead through an alternative, more complex structure. The so-called annexin family presently consists of some 13 members expressed in organisms as widely diverse as higher plants, slime moulds, metazoans, insects, birds and mammals.

This book reviews the major proposed functions of the annexins, including inhibition of phospholipase A2 and of blood coagulation, exocytosis and calcium-channel activity. It concludes that the search for function in the annexin family is likely to enjoy a healthy level of controversy for several years to come.

ISBN 1 85578 008 9 Hardback  £39.50/US$70.00  173 pages  October 1992

The Biology of Nitric Oxide
Edited by S Moncada, M A Marletta, J B Hibbs Jr. and E A Higgs
The proceedings of the Second International Meeting on the Biology of Nitric Oxide brings together for the first time investigations from very different areas of research with a common interest in the newly discovered pathway synthesising nitric oxide from L-arginine in mammalian cells.

Part I - Physiological and Clinical Aspects
ISBN 1 85578 012 7 Hardback £87.50/US$160.00 420 pages
146 papers October 1992

Part II - Enzymology, Biochemistry and Immunology
ISBN 1 85578 013 5 Hardback £57.50/US$110.00 230 pages
97 papers December 1992

Parts I and II purchased together £140.00/US$260.00

Nutrient Regulation of Insulin Secretion
Edited by P R Flatt
The mechanism of insulin release in response to the body’s intake of nutrients is a problem at the centre of research into diabetes. Nutrient Regulation of Insulin Secretion is a comprehensive review of the mechanisms by which nutrients, such as glucose, and neurohormonal stimuli generated by feeding, control pancreatic B-cell function in health and disease.

"...a major work which will be a standard reference on the subject for some years... It is extensively cross-referenced and despite the multiple authorship, it reads as a single volume. Flatt has done well to bring it all together so effectively. Anyone with even a vague interest in insulin secretion will find much of value."

The Endocrinologist
ISBN 1 85578 004 6 H 415pp £60.00/US$111.00 February 1992

Embryonic Development and Manipulation in Animal Production: Trends in Research and Applications
Edited by A Lauria and F Gandolfi
ISBN 1 85578 033 X H 282 pp £60.00/US$115.00 Nov 1992

The Archaebacteria: Biochemistry and Biotechnology
Edited by M J Danson, D W Hough and G G Lunt
This Biochemical Society Symposium drew together acknowledged international experts on archaebacteria. They explored the biochemistry and molecular biology of these unusual organisms and examined how we might use these cells and their uniquely stable constituents to meet the demands of industry’s biotechnological future.

"This is an excellent book, always interesting, very readable, state of the art and a significant potential addition to any library."

The Biochemist
ISBN 1 85578 010 0 H 212pp £45.00/US$90.00 July 1992

The Annexins
Edited by S E Moss
The annexin family presently consists of some 13 members expressed in organisms as widely diverse as higher plants, slime moulds, metazoans, insects, birds and mammals. This book reviews the major proposed functions of the annexins, including inhibition of phospholipase A2 and of blood coagulation, exocytosis and calcium-channel activity.
