

Compendium of Biochemical Nomenclature and Related Documents

New

Published for the International Union of Biochemistry and Molecular Biology by Portland Press

Edited by C Liébecq

This is an essential reference text for all authors and editors in biochemistry and related disciplines. It contains all the current recommendations on nomenclature issued by the nomenclature committees of the International Union of Biochemistry. It also includes text from, and references to, other important nomenclature documents.

The book's main sections cover: amino acids, peptides and proteins; enzymes; nucleotides, nucleic acids and protein synthesis; carbohydrates; and lipids. There are also articles covering the nomenclatures of: organic chemistry, isotopically modified compounds, phosphorus-containing compounds, folic acids, vitamin B6, corrinoids and tetrapyrroles; as well as the presentation of thermodynamic data.

Contents

General - Nomenclature of organic chemistry: stereochemistry; Nomenclature of organic chemistry: natural products and related compounds; Isotopically modified compounds and isotopically labelled compounds; Recommendations for the presentation of thermodynamic and related data in biology; Citation of bibliographic references in biochemical journals.

Amino acids, peptides and proteins - Nomenclature and symbolism for amino acids and peptides; Abbreviated nomenclature of synthetic polypeptides - Polymerized amino acids; Abbreviations and symbols for the description of the conformation of polypeptide chains; Nomenclature of peptide hormones; Nomenclature of glycoproteins, glycopeptides and peptidoglycans; Nomenclature of initiation, elongation and termination factors for translation in eukaryotes.

Enzymes - Nomenclature of multiple forms of enzymes; Symbolism and terminology in enzyme kinetics; Nomenclature for multienzymes.

Nucleotides, nucleic acids and protein synthesis - Abbreviations and symbols for nucleic acids, polynucleotides and their constituents; Abbreviations and symbols for the description of the conformations of polynucleotide chains; Nomenclature for incompletely specified bases in nucleic acid sequences; Nomenclature of initiation, elongation and termination factors for translation in eukaryotes.

Carbohydrates, etc. - Carbohydrate nomenclature; Nomenclature of cyclitols; Numbering of atoms in *myo*-inositol; Conformational nomenclature for five- and six-membered ring forms of monosaccharides and their derivatives; Nomenclature of unsaturated monosaccharides; Nomenclature of branched-chain monosaccharides; Abbreviated terminology of oligosaccharide chains; Polysaccharide nomenclature; Symbols for specifying the conformation of polysaccharide chains; Nomenclature of glycoproteins, glycopeptides and peptidoglycans.

Lipids, etc. - Nomenclature of lipids; Nomenclature of steroids; Nomenclature of quinones with isoprenoid side chains; Nomenclature of carotenoids and amendments; Nomenclature of tocopherols and related compounds; Nomenclature of vitamin D; Nomenclature of retinoids; Prenol nomenclature.

Miscellaneous - Nomenclature of phosphorus-containing compounds of biochemical importance; Nomenclature and symbols for folic acids and related compounds; Nomenclature for vitamins B-6 and related compounds; Nomenclature of corrinoids; Nomenclature of tetrapyrroles. Excerpts from the newsletters of the nomenclature committees of the International Union of Biochemistry (JCBN and NC-IUB); Journals and other documents of biochemical nomenclature.

Postgraduate Study in the Biological Sciences:

A Researcher's Companion

R J Beynon

Thinking of a career in research? About to start - or finish - your PhD? About to start post-doctoral research? Then this guide is essential for you. It provides some of the basic advice and information that will be needed during a research training, with a two-fold emphasis; the importance of planning, and the need to develop independence of thought and action.

What is in it for you?

Students: It presents, in an easy and non-dictatorial style, an indication of the way that you can proceed, and a brief description of the types of resources which can facilitate your progress.

Supervisors: This book will excel as a foundation course on essential skills for research students that, although seen as peripheral to experimentation, mark a professional scientist. Used as a supplement to your established practices, it aims to extend student awareness and skills through their own efforts.

Contents: Starting out ♦ Developing your experimental skills ♦ Conducting a research project ♦ Writing about your work ♦ Speaking in public ♦ Computers and computing ♦ Safety and legislative control ♦ The graduate student as teacher ♦ Moving on

Biochemical Journal: Reviews 1992

Edited by W H Evans

This invaluable compendium contains the review articles published in the *Biochemical Journal* in 1992. The reviews provide the opportunity for research workers to gain an overview of areas outside their own particular speciality, and the compilation is also an important source of teaching material.

Topics covered include: 5'-nucleotidase; expression of mouse mammary tumour virus; nuclear protein phosphorylation and growth control; targeting proteins to mitochondria; import of proteins into peroxisomes; calreticulin; G protein-coupled receptors; inositol-lipid-specific phospholipase C isoenzymes; the plant phosphoinositide system; control of respiration and ATP synthesis; metabolic control analysis; glycoprotein hormones.

Journal of Biological Chemistry:

Minireview

Compendium 1992

The *Journal of Biological Chemistry* is one of the world's leading journals of biological chemistry and publishes over 1000 research articles each year. It also publishes review articles on selected topics of scientific importance.

Topics reviewed include:

Rhodopsin; Ca²⁺ channels' protein disulphide isomerase; lens crystallins; the interferon system; adenosine receptors; the synapses; ankyrins; angiogenesis; crystallization of actin; cyclosporin A; the p53 tumor suppressor protein; DNA replication fidelity; signal transduction in bacterial chemotaxis; interleukin-4-related lymphokines; transcriptional regulation of heat shock genes; precursor processing endoproteases; Ras as a molecular switch in signal transduction; Apolipoprotein B.

The Pathophysiology of Gut and Airways:

An Introduction

Edited by P L R Andrews and J G Widdicombe

The first in the new *Studies in Physiology* series published on behalf of the Physiological Society, this book will clarify for student and lecturers alike, complex and difficult areas of physiology.

This book examines the pathophysiological basis of a number of relatively common clinical problems of the gut and airways. These two systems share many similar physiological features which are reflected in the pathophysiological basis of the diseases and disorders reviewed. Chapters are paired dealing with the same or similar problems in the gut and airways and are selected to illustrate the clinical impact of an understanding of normal physiological processes.

The Biology of Nitric Oxide

Edited by **S Moncada, M A Marletta, J B Hibbs Jr. and E A Higgs**

The proceedings of the Second International Meeting on the Biology of Nitric Oxide brings together for the first time investigations from very different areas of research with a common interest in the newly discovered pathway synthesising nitric oxide from L-arginine in mammalian cells.

Part I - Physiological and Clinical Aspects

ISBN | 85578 012 7 Hardback £87.50/US\$160.00 420 pages

Part II - Enzymology, Biochemistry and Immunology

ISBN | 85578 013 5 Hardback £57.50/US\$110.00 230 pages

Parts I and II purchased together £140.00/US\$260.00

Nutrient Regulation of Insulin Secretion

Edited by **P R Flatt**

The mechanism of insulin release in response to the body's intake of nutrients is a problem at the centre of research into diabetes. **Nutrient Regulation of Insulin Secretion** is a comprehensive review of the mechanisms by which nutrients, such as glucose, and neurohormonal stimuli generated by feeding, control pancreatic B-cell function in health and disease.

"...a major work which will be a standard reference on the subject for some years.... It is extensively cross-referenced and despite the multiple authorship, it reads as a single volume. Flatt has done well to bring it all together so effectively. Anyone with even a vague interest in insulin secretion will find much of value."

The Archaeobacteria: Biochemistry and Biotechnology

Edited by **M J Danson, D W Hough and G G Lunt**

This Biochemical Society Symposium drew together acknowledged international experts on archaeobacteria. They explored the biochemistry and molecular biology of these unusual organisms and examined how we might use these cells and their uniquely stable constituents to meet the demands of industry's biotechnological future.

"This is an excellent book, always interesting, very readable, state of the art and a significant potential addition to any library."

The Annexins

Edited by **S E Moss**

The annexin family presently consists of some 13 members expressed in organisms as widely diverse as higher plants, slime moulds, metazoans, insects, birds and mammals. This book reviews the major proposed functions of the annexins, including inhibition of phospholipase A₂ and of blood coagulation, exocytosis and calcium-channel activity.
