Nutrient Regulation of Insulin Secretion

Edited by P R Flatt

The mechanism of insulin release in response to the body's intake of nutrients is a problem at the centre of research into diabetes. Nutrient Regulation of Insulin Secretion is a comprehensive review of the mechanisms by which nutrients, such as glucose, and neurohormonal stimuli generated by feeding, control pancreatic B-cell function in health and disease.

"...an excellent collection of authoritative reviews. I was particularly impressed with the up-to-date feeling which was present throughout the book."

K Docherty, The Biochemist

"...a major work which will be a standard reference on the subject for some years.... It is extensively cross-referenced and despite the multiple authorship, it reads as a single volume. Flatt has done well to bring it all together so effectively. Anyone with even a vague interest in insulin secretion will find much of value."

D G Johnston, The Endocrinologist

ISBN 1 85578 004 6 Hardback 415 pages £60.00/US$111.00 February 1992

27 Essays in Biochemistry

Volume 27

Edited by K F Tipton

Successfully relaunched by Portland Press in 1991 with a new format, each issue of Essays In Biochemistry contains more articles than before, carefully edited to provide information which can be assimilated by advanced undergraduates and are ideal as background to teaching notes.

Contents
The collagen superfamily - diverse structures and assemblies, D J S Hulmes
Towards an understanding of C3-C4 photosynthesis, S Rawsthorne
The biochemistry of blood clotting: the digestion of a liquid to form a solid, M F Scally
Endothelins, T Masaki and M Yanagisawa
Wither PQP, W S McIntyre
Ubiquitin, R J Mayer and F J Doherty
The repair of DNA Alkylation damage by methyltransferases and glycosylases, L D Samson
Roles of protein phosphorylation in synaptic transmission, R Rodnight and S T Wofchuk
Biosensors: principles and practice, J D Newman and A P F Turner
Cell death in Parkinson's disease, S A Greenfield
How groups of proteins titrate - a new approach, H B F Dixon
Proteolysis is a key process in virus replication, G Kemp, A Webster and W C Russell

ISBN 1 85578 015 1 Paperback 178 pages £15.00/US$30.00 July 1992

The Archaeobacteria: Biochemistry and Biotechnology
Edited by M J Danson, D W Hough and G G Lunt

This Biochemical Society Symposium drew together acknowledged international experts on archaeobacteria. They explored the biochemistry and molecular biology of these unusual organisms and examined how we might use these cells and their uniquely stable constituents to meet the demands of industry's biotechnological future.

"This is an excellent book, always interesting, very readable, state of the art and a significant potential addition to any library."

The Annexins
Edited by S E Moss

The annexin family presently consists of some 13 members expressed in organisms as widely diverse as higher plants, slime moulds, metazoa, insects, birds and mammals. This book reviews the major proposed functions of the annexins, including inhibition of phospholipase A2, and of blood coagulation, exocytosis and calcium-channel activity.

The Archaebacteria: Biochemistry and Biotechnology

Edited by M J Danson, D W Hough and G G Lunt

The tools of biotechnology are often living organisms and cell constituents which have to survive extremely challenging environments. Archaebacteria may provide some of the answers to many of the problems of using biotechnological techniques under industrial conditions.

The Biochemical Society Symposium drew together acknowledged international experts on archaeabacteria. They explored the biochemistry and molecular biology of these unusual organisms, and then examined how we might use these cells and their uniquely stable constituents to meet the demands of industry's biotechnological future.

The book is divided into five sections:

* The archaeabacteria
* Biochemical features of archaeabacteria
* Molecular biological features of archaeabacteria
* Proteins in extreme environments
* Biotechnological potential of the archaeabacteria

Contents

What are the archaeabacteria and why are they important? W F Doolittle
The enzymology of archaeabacterial pathways of central metabolism M J Danson and D W Hough
Bioenergetics and autotrophic carbon metabolism of chemolithotrophic archaeabacteria G Fuchs et al
Biochemistry of methanogenesis R S Wolfe
Archaeabacterial lipids: structure, biosynthesis and function M Kates
Progress in developing the genetics of the halobacteria W F Doolittle et al
RNA polymerases and transcription in archaeabacteria W Zillig et al
Structure, function and evolution of the archaeal ribosome A T Matheson
Chromosome structure and DNA topology in extremely thermophilic archaeabacteria P Fortherre et al
Halophilic malate dehydrogenase - a case history of biophysical investigations H Eisenberg
Proteins from hyperthermophilic archaea R Hensel et al
Biotechnological potential of halobacteria F Rodriguez-Valera
Enzymes from thermophilic archaeabacteria: current and future applications in biotechnology D A Cowan
Thermoacidophilic archaeabacteria: potential applications P R Norris
Biotechnological potential of methanogens L Daniels
Where next with archaeabacteria? O Kandler
