Clinical Detective Stories
A Problem-Based Approach to Clinical Cases in Energy and Acid-Base Metabolism
M L Halperin and F S Rolleston
This book is written for students who want to apply fundamental concepts of energy and acid-base metabolism to clinical problems. It uses more than 50 clinical cases, with data obtained in the hospital setting, to introduce each set of concepts, and to provide the basis for discussion of the needed biochemistry and physiology. Questions and commentary drawn from human and veterinary medicine provide a broad scope for understanding the concepts presented; details of metabolism are presented only when they are necessary to an understanding of clinical medicine.

Contents: Energy and Acid-Base Physiology: Energy metabolism: fuels, organs, pathways and controls; Acid-base metabolism: production and excretion of wastes. Clinical Applications: Energy metabolism in exercise; Diabetes mellitus; Hypoglycemia; Metabolic acidosis. Metabolic Function and Control: Introduction to metabolic pathways and control mechanisms; The carbohydrate system; The pyruvate dehydrogenase system; The ATP generation system; The fat system; The protein system. Discussion of Questions. Structure and Pathways

"It is a pleasure to see a familiar subject treated from a nontraditional viewpoint, especially when it succeeds as well as this book does."

Animal Experimentation and the Future of Medical Research
Edited by Dr Jack Botting
The proceedings of a meeting held by the Research Defence Society to examine, from a scientific and medical perspective, the future role of animal experimentation in medical research without ignoring the ethical context and justification for that research. Eminent scientists and clinicians from the UK and the USA spoke about their fields of work and considered the importance of animal experiments.

Contents The ethical justification for the use of animals in the social context; Animal experimentation and the future of medicine; Animal experimentation in fundamental research; The real ethical issues in animal research; The discovery of drugs and animal research; Animal experimentation and neuroscience research; Animal experimentation and cancer research

Women Physiologists
An Anniversary Celebration of their Contributions to British Physiology
Edited by Lynn Bindman, Alison Bradin and Tilli Tansey
This book focuses on a group of women who have made significant contributions to the field of physiology, many being awarded public honours for their achievements. Included are individual biographies highlighting their scientific research and presenting extracts from original papers, together with a commentary for those readers who are not experts in the field.

The book considers the barriers some women faced in the workplace, including lack of funding and availability of research posts. It concludes with a brief look at the situation for contemporary female scientists, and poses the question 'Is it much better than for their predecessors?'

The Pathophysiology of Gut and Airways: An Introduction
Edited by P L R Andrews and J G Widdicombe
The first in the new Studies in Physiology series published on behalf of the Physiological Society, this book will clarify for student and lecturers alike, complex and difficult areas of physiology. The gut and airways both have interfaces with the outside environment and have a number of structural and functional similarities. This book examines the pathophysiological basis of a number of relatively common clinical problems of the gut and airways. These two systems share many similar physiological features which are reflected in the pathophysiological basis of the diseases and disorders reviewed. Chapters are paired dealing with the same or similar problems in the gut and airways and are selected to illustrate the clinical impact of an understanding of normal physiological processes.

**Hemicellulose and Hemicellulases**
Edited by M P Coughlan and G P Hazlewood
Portland Press Monograph Series No. 4

This book is an authoritative and up-to-date treatment of both the substrate (hemicellulose) and the enzymes which convert it to products of smaller molecular weight. It brings together the salient features of this group of enzymes with considerable biotechnological potential. It will be of interest to academics, postgraduates and researchers involved in biomass conversion, pulp and paper manufacture, brewing and flour modification.

Topics covered include: Chemistry of hemicelluloses; Biochemical aspects of the production of microbial hemicellulases; Enzymological aspects of microbial hemicellulases; Feruloyl and p-coumaroyl esterases from the anaerobic fungus *Neocallimastix* strain MC-2; Molecular biology of hemicellulases; Applications of hemicellulases in biopulping, bio-bleaching, food, feed and pulp and paper industries.

ISBN 1 85578 036 4 Hardback £38.95/US$60.00 156 pages approx. June 1993

---

**Immunotechnology**
Edited by J P Gosling and D R Reen
Portland Press Proceeding No 4

This book provides a detailed account of the current state of immunotechnology and aims to promote increased interaction between practitioners of the different applications.

Topics covered include: Generation of antibodies cross-reactive with proteins by peptide immunization; Regulation of immunoglobulin gene expression; Combinatorial libraries; Genetics of antibody assembly in plants; Single-chain immunotechnology of Fv analogues and fusion proteins; Real-time BIA for the direct measurement of antibody-antigen interactions; Functional mapping of proteins with monoclonal antibodies; Advanced immunoassays; Catalytic antibodies; Monoclonal antibodies and their fragments for drug targeting; The application of engineered antibodies to the treatment of neoplastic disease.

ISBN 1 85578 035 6 Hardback £45.00/US$72.00 164 pages approx. July 1993

Postgraduate Study in the Biological Sciences

**A Researcher's Companion**
R J Beynon

Thinking of a career in research? About to start - or finish - your PhD? About to start postdoctoral research? Then this guide is essential for you. It provides some of the basic advice and information that will be needed during a research training.

**What is in it for you?**

**Students:** It presents, in an easy and non-dictatorial style, an indication of the way that you can proceed, and a brief description of the types of resources which can facilitate your progress.

**Supervisors:** This book will excel as a foundation course on essential skills for research students that, although seen as peripheral to experimentation, mark a professional scientist. Used as a supplement to your established practices, it aims to extend student awareness and skills though their own efforts.

"... sound advice on every aspect of doing a higher degree"

**Trends in Cell Biology**

"I have encountered no other book quite like this one for brevity, readability and practical down-to-earth good sense"

Times Higher Education Supplement

**Contents:** Starting out. Developing your experimental skills. Conducting a research project. Writing about your work. Talking about your work. Computers and computing. Safety matters. The graduate student as teacher. Moving on.

Nitric Oxide: Brain and Immune System
Edited by S Moncada, G Nisticò and E A Higgs
This book contains the proceedings of the First International Meeting on Nitric Oxide: Brain and Immune System. The meeting brought together the diverse research on nitric oxide and the interaction between the brain and the immune system. Researchers in nitric oxide, immunology, the cardiovascular system and the CNS will be interested in this book.
1 85578 046 1 Hardback £78.00/US$124.00 300 pages December 1993

Dermatan Sulphate Proteoglycans Chemistry, Biology and Chemical Pathology
Edited by John E Scott
This book brings new perspectives to proteoglycans and glycosaminoglycans in which their function is directly linked to their chemical morphology. Biochemists, carbohydrate chemists, anatomists, ophthalmologists and rheumatologists will be interested in this book.
1 85578 051 8 Hardback £75.00/US$115.00 360 pages November 1993

Membrane Protein Expression Systems A User’s Guide
Edited by G W Gould
Researchers in a wide range of subjects are beginning to appreciate the power of molecular biology when applied to membrane proteins. As a consequence the expression of proteins in different systems is becoming an increasingly widely used technique.
This book is a simple-to-read laboratory manual describing the principles behind the commonly used expression systems, e.g. Escherichia coli, cell culture systems, Xenopus oocytes, baculovirus, vaccinia and yeast. Detailed experimental protocols for each system are provided in an easy-to-use, step-by-step format. The benefits of each system, as well as the likely pitfalls that newcomers might encounter, are discussed in each case.
This user-friendly guide is a must for all researchers, from PhD students to senior scientists, studying membrane proteins. It’s appeal will span a range of disciplines, including genetics, physiology, biochemistry, molecular biology and biophysics.
