

**Review**

- The Phox homology (PX) domain, a new player in phosphoinositide signalling** 513–530  
*by Y. Xu, L.-F. Seet, B. Hanson and W. Hong*

**Research Communication**

- Identification of nucleolin as a new L-selectin ligand G. Harms, R. Kraft, G. Grelle, B. Volz, J. Dernedde and R. Tauber 531–538

**Research Papers**

- NMR structure of bucardin, a neurotoxin from the venom of the Malaysian krait (*Bungarus candidus*) A.M. Torres, R.M. Kini, N. Selvanayagam and P.W. Kuchel 539–548
- Human kinesin superfamily member 4 is dominantly localized in the nuclear matrix and is associated with chromosomes during mitosis Y.M. Lee, S. Lee, E. Lee, H. Shin, H. Hahn, W. Choi and W. Kim 549–556
- Hydrogen peroxide-induced production of a 40 kDa immunoreactive thyroglobulin fragment in human thyroid cells: the onset of thyroid autoimmunity? C. Duthoit, V. Estienne, A. Giraud, J.-M. Durand-Gorde, Å.K. Rasmussen, U. Feldt-Rasmussen, P. Carayon and J. Ruf 557–562
- Peroxyntirite-induced nitration of tyrosine-34 does not inhibit *Escherichia coli* iron superoxide dismutase L. Soulière, C. Claparols, J. Périé and P. Hoffmann 563–567
- RB2/p130 ectopic gene expression in neuroblastoma stem cells: evidence of cell-fate restriction and induction of differentiation F.P. Jori, U. Galderisi, E. Piegari, G. Peluso, M. Cipollaro, A. Cascino, A. Giordano and M.A.B. Melone 569–577
- Ecto-protein kinase substrate p120 revealed as the cell-surface-expressed nucleolar phosphoprotein Nopp140: a candidate protein for extracellular Ca<sup>2+</sup>-sensing D. Kübler 579–587
- Antimonite regulation of the ATPase activity of ArsA, the catalytic subunit of the arsenical pump A.R. Walmsley, T. Zhou, M.I. Borges-Walmsley and B.P. Rosen 589–597
- Regulation and composition of activator protein 1 (AP-1) transcription factors controlling collagenase and c-Jun promoter activities L. Steinmüller, G. Cibelli, J.R. Moll, C. Vinson and G. Thiel 599–607
- Efficient eukaryotic expression system for authentic human sex hormone-binding globulin J. Hilpert, H. Vorum, R. Burmeister, R. Spoelgen, I. Grishkovskaya, R. Misselwitz, A. Nykjaer and T.E. Willnow 609–615
- Kynurenine aminotransferase and glutamine transaminase K of *Escherichia coli*: identity with aspartate aminotransferase Q. Han, J. Fang and J. Li 617–623
- Lysine<sup>164</sup>α of protein farnesyltransferase is important for both CaaX substrate binding and catalysis K.E. Hightower, S. De, C. Weinbaum, R.A. Spence and P.J. Casey 625–631
- Transcriptional repressor of vasoactive intestinal peptide receptor mediates repression through interactions with TFIIB and TFIIEβ L. Pei 633–638
- HstK, a cyanobacterial protein with both a serine/threonine kinase domain and a histidine kinase domain: implication for the mechanism of signal transduction V. Phalip, J.-H. Li and C.-C. Zhang 639–644

Oligomerization of green fluorescent protein in the secretory pathway of endocrine cells	R.K. Jain, P.D.M. Joyce, M. Molinete, P.A. Halban and S.-U. Gorr	<b>645–649</b>
Allosteric behaviour of 1:5 hybrids of mutant subunits of <i>Clostridium symbiosum</i> glutamate dehydrogenase differing in their amino acid specificity	A. Goyal, X.-G. Wang and P.C. Engel	<b>651–656</b>
Identification of essential active-site residues in ornithine decarboxylase of <i>Nicotiana glutinosa</i> decarboxylating both L-ornithine and L-lysine	Y.-S. Lee and Y.-D. Cho	<b>657–665</b>
UDP-glucose pyrophosphorylase: up-regulation in hypertrophic cartilage and role in hyaluronan synthesis	C. Magee, M. Nurminkaya and T.F. Linsenmayer	<b>667–674</b>
Bacterial peptide methionine sulphoxide reductase: co-induction with glutathione S-transferase during chemical stress conditions	A. Tamburro, M. Allocati, M. Masulli, D. Rotilio, C. Di Ilio and B. Favaloro	<b>675–681</b>
Proprotein convertase PACE4 is down-regulated by the basic helix–loop–helix transcription factor hASH-1 and MASH-1	I. Yoshida, S. Koide, S.-i. Hasegawa, A. Nakagawara, A. Tsuji and Y. Matsuda	<b>683–689</b>
Phosphoinositide 3-kinase- $\gamma$ induces <i>Xenopus</i> oocyte maturation via lipid kinase activity	S. Hehl, B. Stoyanov, W. Oehrl, R. Schönherr, R. Wetzker and S.H. Heinemann	<b>691–698</b>
Determination of the native form of FadD, the <i>Escherichia coli</i> fatty acyl-CoA synthetase, and characterization of limited proteolysis by outer membrane protease OmpT	J.-H. Yoo, O.H. Cheng and G.E. Gerber	<b>699–706</b>
Phospholipase D1b and D2a generate structurally identical phosphatidic acid species in mammalian cells	T.R. Pettitt, M. McDermott, K.M. Saqib, N. Shimwell and M.J.O. Wakelam	<b>707–715</b>
Influence of electrochemical properties in determining the sensitivity of [4Fe-4S] clusters in proteins to oxidative damage	G.J. Tilley, R. Camba, B.K. Burgess and F.A. Armstrong	<b>717–726</b>
$\alpha$ -Retaining glucosyl transfer catalysed by trehalose phosphorylase from <i>Schizophyllum commune</i> : mechanistic evidence obtained from steady-state kinetic studies with substrate analogues and inhibitors	B. Nidetzky and C. Eis	<b>727–736</b>
