Price 12s. 6d. net

The *Biochemical Journal* is conducted by the Biochemical Society and is published by the Cambridge University Press. Under present conditions the parts of each volume will not necessarily appear at regular intervals but will be issued as frequently as possible. During 1946 it is hoped that six parts will be published.

The Biochemical Society was instituted solely for the advancement of the Science of Biochemistry, and holds meetings at different centres for the communication of original papers, and for the discussion of current problems. Persons interested in Biochemistry are eligible for election. Members whose subscriptions are not in arrears are entitled to receive the *Biochemical Journal* without further payment. Further information may be obtained from the Hon. Secs., Dr W. Robson, Dept. of Physiology, King's College, Strand, London, W.C. 2, and Dr J. N. Davidson, National Institute for Medical Research, Hampstead, London, N.W. 3, or from the Hon. Treas., Dr J. H. Bushill, The Laboratories, Cadby Hall, London, W. 14.

Subscriptions to the *Biochemical Journal*. For non-members of the Biochemical Society the subscription to the *Biochemical Journal* is £3. 10s. 0d. per volume, payable in advance to the Cambridge University Press, Bentley House, 200 Euston Road, London, N.W. 1, to Dr J. H. Bushill, The Laboratories, Cadby Hall, London, W. 14, or to any bookseller. In the United States of America the *Journal* may be purchased from the University of Chicago Press, 5750 Ellis Avenue, Chicago, Ill., the American agents of the Cambridge University Press for the sale of the *Biochemical Journal*.

Communications respecting the sale of single issues or back numbers of the *Journal* should be addressed to the Cambridge University Press, Bentley House, 200 Euston Road, London, N.W. 1.

Claims for the replacement of *Journals* lost in transmission will not be entertained if they are received later than three months after the date of the posting of the *Journal*.

Prices of back numbers of the *Journal*.

In paper covers

*Volumes 1, 3-6.	(<i>Out of print.</i>)
Volume 2.	31s. 6d. net.
*Volumes 7-10.	(<i>Out of print.</i>)
Index Authors and Subjects in Vols. 1-10.	5s. 3d. net. (By post 5s. 5d.)
Volumes 11-16.	(<i>Out of print.</i>)
Volume 17.	60s. net.
*Volumes 18 and 19.	(<i>Out of print.</i>)
Volumes 20-25.	60s. net per volume.
Volumes 26-28.	70s. net per volume.
*Volumes 29-33.	(<i>Out of print.</i>)
Volumes 34-36.	70s. net per volume.
Volumes 37 and 38. (Reserved for Members of the Biochemical Society only.)	
Index Authors and Subjects in Volumes 11-20.	10s. net. (By post 10s. 4d.)
Index Authors and Subjects in Volumes 21-30.	15s. net. (By post 15s. 4d.)

* Odd numbers from these Volumes, where available, can be quoted for on application.

Binding. Quotations can be given by the publishers for bound copies of back numbers; also for buckram binding cases, and for binding subscribers' sets. (Suspended.)

DIRECTIONS TO CONTRIBUTORS

Papers submitted for publication in the *Biochemical Journal* should be as concise as possible. In the interests of the *Journal* it will be necessary for the Editors to return any typescript which does not satisfy this condition. Special attention is directed to the sections below concerning the preparation of the typescript. Care in this matter will hasten publication.

Communications. Papers submitted for publication should be sent to Prof. E. J. King (*Biochemical Journal*), British Postgraduate Medical School, Ducane Road, London, W. 12. Communications respecting the purchase of reprints should be addressed to The University Press, Cambridge.

General. Submission of a paper to the Editorial Board will be held to imply that it represents the results of original research not previously published; that it is not under consideration for publication elsewhere, and that if accepted for the *Biochemical Journal* it will not be published otherwise in the same form, either in English or in any other language, without the consent of the Editorial Board.

Contributors who reside outside Great Britain are requested to nominate somebody in Great Britain who is willing to correct the proofs of their papers. Papers from such contributors should be accompanied by a statement of the number of reprints required.

Unless confusion would otherwise arise, contributors' names should appear as initials (but female authors may use one given name in full) and surnames only, without titles or suffixes. The name and address of the laboratory where the work was performed should be given. Any necessary descriptive material regarding the author, e.g. Beit Memorial Fellow, should appear in brackets after the author's name, or at the end of the paper, and not in the form of a footnote.

Typescripts should carry an indication of the name and address of the person to whom the proof of the paper is to be sent, and should give also a shortened version of the paper's title, not exceeding forty-five letters and spaces in length, suitable for a running title in the published pages of the work.

Form of Papers Submitted for Publication. The onus for preparing a paper in a form suitable for sending to press lies in the first place with the author. Authors should consult a current issue in order to make themselves familiar with the *Biochemical Journal's* practice concerning typographical and other conventions, use of cross-headings, lay-out of tables, etc. Attention to these and other details (mentioned below) in the preparation of the typescript before this is sent to the Editors will shorten the time required for publication. The need for undue amounts of editorial revision caused by badly prepared typescript will lead to delay in publication for which the Editors cannot accept responsibility. Papers on specialized aspects of the subject should be presented in such a way as to make them intelligible, without undue difficulty, to the ordinary reader of the *Journal*. In any case sufficient information should be made available to permit repetition of the published work by any competent reader of the *Journal*.

Papers intended for publication should be in double-spaced typing on sheets of uniform size with adequate margins. Top copies only should be submitted. The paper should be written in the English language and should, in general, be divided into the following parts: (a) Introductory paragraph, containing the reasons for publication of the work; (b) Experimental methods adopted: with chemical papers the experimental part will normally appear towards the end, but with other types of publication Methods should appear after Introduction; (c) Results: these should be given as concisely as possible, preferably in the form of figures or tables. Tables and figures illustrating the same data will only rarely be permitted. Illustrative protocols only should be included; (d) Discussion: it is desirable that

the presentation of the results and the discussion of their significance should be considered separately; (e) Summary: a brief self-contained summary, amounting to not more than 3% of the length of the paper, should be included; the paragraphs of the summary should be numbered; (f) References: these should be given in the text thus: Barnett & Robinson (1942), (Culbertson & Thomas, 1933); where a paper to be cited has more than two authors, the names of all the authors should be given when reference is first made, e.g. (Osborne, Mendel & Ferry, 1919); subsequent citations should appear thus: (Osborne *et al.* 1919). Where more than one paper by the same authors has appeared in one year the reference should be given as follows: Osborne & Mendel (1914*a*); Osborne & Mendel (1914*b*); or Osborne & Mendel (1914*a, b*); (Osborne & Mendel, 1914*a*, 1916; Barnett & Robinson, 1942).

References. At the end of the paper references should be given in alphabetical order according to the name of the first author of the publication quoted, and should include the authors' initials; the title of the paper should not be included. Titles of journals should be abbreviated in accordance with the system used in the *World List of Scientific Periodicals* (1935: 2nd ed. Oxford: University Press). Examples of such abbreviations will be found in the current numbers of the *Biochemical Journal* and a useful list has recently been published in the *Journal of Physiology* (1945, 104, 232). References to books and monographs should include the town of publication and the name of the publisher, as well as the date of publication and the number of the edition to which reference is made. Thus:

- Barnett, J. W. & Robinson, F. A. (1942). *Biochem. J.* **36**, 364.
Culbertson, C. C. & Thomas, B. H. (1933). *Rep. Agric. Res. Iowa St. Coll.* **32**.
Doisy, E. A., Somogyi, M. & Shaffer, P. A. (1923). *J. biol. Chem.* **55**, Proc. xxxi.
Fairley, N. H. (1938). *Nature, Lond.*, **142**, 1156.
Hennessy, D. J. (1941). *Industr. Engng Chem. (Anal. ed.)*, **13**, 216.
King, H. (1941). *J. chem. Soc.* p. 338.
Osborne, T. B. & Mendel, L. B. (1914*a*). *J. biol. Chem.* **17**, 325.
Osborne, T. B. & Mendel, L. B. (1914*b*). *J. biol. Chem.* **18**, 1.
Osborne, T. B. & Mendel, L. B. (1916). *Biochem. J.* **10**, 534.
Osborne, T. B., Mendel, L. B. & Ferry, E. L. (1919). *J. biol. Chem.* **37**, 233.
Starling, E. H. (1915). *Principles of Human Physiology*, 2nd ed. London: Churchill.

Statistical Treatment of Data. In general the publication is not necessary of all the individual results of a number of similar experiments. A statement of the number of individual results, their mean value, the standard error of the mean value, and the extreme range (highest and lowest values in the series) is usually sufficient.

A statement that a significant difference probably exists between the mean values of two groups of data should be accompanied by the calculated probability that the observed difference is significant.

Illustrations. Illustrations, which should be approximately twice the size of the finished block, should each be on a separate sheet, packed flat and bearing the author's

name. Diagrams should be in Indian ink and should be drawn on plain white paper, Bristol board, or faintly blue-lined paper. Curves based on experimental data should carry clear indications of the experimentally determined points. Letters, numbers, etc., should be written lightly in pencil. On the back of each figure should be written the author's name and the title of the paper. Legends and captions should be typed separately from the illustrations, each on a separate sheet, and numbered correspondingly with the relevant illustration. Figures should be comprehensible without reference to the text.

Tables. Tables should carry headings describing their content and should be comprehensible without reference to the text. The dimensions of the data, e.g. g./100 ml., should be given at the top of each column, and not repeated on each line of the table. Tables should not normally be included in the body of the text, but should be typed on separate sheets. Their approximate position in the text should be indicated.

Chemical Formulae. These should be written as far as possible on a single horizontal line. With inorganic substances, formulae may be used, particularly in the experimental portion, at the discretion of the editors. With salts it must be stated whether or not the anhydrous material is used, e.g. anhydrous CuSO_4 , or which of the different crystalline forms is indicated, e.g. $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$, $\text{CuSO}_4 \cdot \text{H}_2\text{O}$.

Description of Solutions. Solutions of common acids, bases and salts are preferably defined in terms of normality (N) or molarity (M), e.g. N-HCl; 0.1 M- NaH_2PO_4 . The term '% ' must be used in its correct sense, i.e. g./100 g. of solution. 10% HCl means 10 g. of hydrogen chloride in 100 g. of aqueous solution, and should never be used to indicate a ten-fold dilution of laboratory concentrated hydrochloric acid. For 'per cent by volume', i.e. ml./100 ml., the term '% (v/v)' may be employed. To indicate that a given weight of substance is contained in 100 ml. of solution, the term '% (w/v)' (weight per volume) may be used.

Symbols and Abbreviations. Authors should refer to current numbers of the *Biochemical Journal* for information in this connexion. The chemical nomenclature adopted is that followed by the Chemical Society (see *J. chem. Soc.* 1936, p. 1067). With a few exceptions the symbols and abbreviations are those adopted by a committee of the Chemical, Faraday and Physical Societies in 1937 (see *J. chem. Soc.* 1944, p. 717). Spectrophotometric terms and symbols are those proposed by the Society of Public Analysts and other Analytical Chemists (see *The Analyst*, 1942, **67**, 164). The attention of authors is particularly drawn to the following symbols: m=(milli)= 10^{-3} and μ =(micro)= 10^{-6} . Note also that ml. (millilitres) should be employed instead of c.c., and μg . (micrograms) instead of γ .

Reprints. Where at least one author of a paper is a member of the Biochemical Society, twenty-five reprints are supplied free of cost. If the supply of paper permits, an author may purchase additional reprints if he notifies the Press on the appropriate form immediately the proof of the paper is received, but only in exceptional circumstances will more than a total of 100 additional reprints be supplied.
