Instructions to Authors

**General policy** The Biochemical Journal publishes papers in English in all fields of biochemistry and cellular and molecular biology. The aim is to make a significant contribution to biochemical knowledge. Papers may include new results obtained experimentally, descriptions of new experimental methods of biochemical importance, or new interpretations of existing results. Novel theoretical contributions will be considered equally with papers dealing with experimental work. All work presented is expected to aim the development of biochemical concepts rather than the mere recording of facts. Preliminary, confirmatory or inconclusive work will not be published. The Biochemical Journal will not publish material that has been wholly or largely published elsewhere, even as a preliminary communication or in unrefereed symposium proceedings or on the World Wide Web (WWW); equally, fragmentation of research into the 'least publishable unit' is discouraged.

Submission of a paper implies that it has been approved by all the named authors, that all persons entitled to authorship have been so named, that it reports unpublished work that is not under consideration elsewhere, and that if the paper is accepted for publication, the authors will transfer to the Biochemical Society the copyright in the paper, which will then not be published elsewhere in the same form, in any language, whether in print or in electronic form. Authors will be required to sign an undertaking to these effects.

Authors may suggest potential reviewers for their papers, but the journal is under no obligation to follow such suggestions. Authors may also specify the names of those they wish to be excluded from the review process, and such requests will usually be respected unless, in the opinion of the journal, such a request unreasonably excludes all the expertise available to it in that scientific area.

To allow the reviewers to assess possible overlap with previous work, all submitted papers must be accompanied by duplicate copies of the author's relevant published work, including that to it in that scientific area. The following types of paper are included in the journal.

**Research Papers** are the normal form of publication, and may be of any length that is justified by their content. However, because of pressure on the journal, those papers whatever its scientific merits, will be accepted if it exceeds the minimum length required for precision in describing the experiments and clarity in interpreting them. As a guide, most Research Papers published in the Biochemical Journal are of between six and eight printed pages. A concise well-written paper tends to be published more rapidly.

**Accelerated Publications (APs)** are short (normally four printed pages) papers bringing particularly novel and significant findings to the attention of the research community. It is intended that a decision on acceptance or rejection will be made within 10 working days of receipt, and publication of accepted APs in an issue will follow within 2 months. APs receive full but accelerated reviewing. The criteria of 'novelty and significance' are strictly enforced, and papers may be rejected solely on the grounds of lack of novelty and significance. APs are not a path to accelerated publication of sound but non-urgent material. Authors must include in their letter of submission a brief statement of why they believe their AP merits accelerated treatment. Papers reporting nucleotide sequences only are not acceptable as APs. Colour figures will be published free of charge in APs, provided the use of colour is deemed scientifically necessary by the reviewers.

**Reviews** will usually be solicited, although unsolicited reviews will be considered for publication. Prospective writers of reviews should first consult the Remit and guidelines of the editorial office and should enclose a short (one page) summary of the area they propose to cover.

**Procedure for submission** These instructions are based on the Biochemical Journal Instructions to Authors (http://www.BiochemJ.org). Authors are encouraged to refer to these for all general guidelines on submitting a paper. For papers for the journal, authors should consult a current issue to make themselves familiar with the general format, such as the use of cross-headings, layout of tables and figures and citation of references. A full page of text in the Biochemical Journal contains approximately 1200 words; when calculating the printed length of papers, allowance must be made for the space occupied by tables and figures and the number of text words reduced accordingly.

The numerical system of references must be used. To ensure that published papers are of a high standard, authors are requested to prepare their manuscripts and their accompanying figures to meet the general style of the journal. It is impracticable to accept papers that do not conform to the general format. The Biochemical Journal contains approximately 1200 words; when calculating the printed length of papers, allowance must be made for the space occupied by tables and figures and the number of text words reduced accordingly.

It is impracticable to accept papers that do not conform to the general format.

**Electronic back archive** This is freely available to all users with Internet access.

**Microfiche and back issues** Volumes 102–336 of the Biochemical Journal are available on microfiche. Back issues are also available. Further details may be obtained from the address below.

**Subscription Department** Portland Customer Services, P.O. Box 32, Commerce Way, Colchester CO2 8HP, Essex, U.K. (telephone 01206 796351; fax 01206 799331; email sales@portland-services.com).

**Advertising** Enquiries about advertising should be addressed to: Mark Burgess, Editorial Department, Portland Press Ltd, Third Floor, Eagle House, 16 Procter Street, London WC1V 6NX, U.K., tel: +44 (0)20 7280 4110, fax +44 (0)20 7280 4169, email: editorial@portlandpress.com.

The paper and cover-boards used in this journal are sourced from sustainable, managed and recycled commercial forests, and are fully recyclable. The bleaching process used for the pulp is 100% ECF (elemental chlorine free).
Research Papers

The selectivity of protein kinase inhibitors: a further update
Published as BJ Immediate Publication 13 September 2007, doi:10.1042/BJ20070797
297–315

The epigenetic signature of CFTR expression is co-ordinated via chromatin acetylation through a complex intronic element
T. Paul, S. Li, S. Khurana, N.S. LeLeiko and M.J. Walsh
Published as BJ Immediate Publication 12 September 2007, doi:10.1042/BJ20070282
317–326

A CBS domain-containing pyrophosphatase of Moorella thermoacetica is regulated by adenine nucleotides
J. Jämsen, H. Tuominen, A. Salminen, G.A. Belogurov, N.N. Magretova, A.A. Baykov and R. Lahti
Published as BJ Immediate Publication 23 August 2007, doi:10.1042/BJ20071017
327–333

Intracellular localization of human Ins(1,3,4,5,6)P_5 2-kinase
Published as BJ Immediate Publication 17 August 2007, doi:10.1042/BJ20070332
335–345

Determination of protein regions responsible for interactions of amelogenin with CD63 and LAMP1
Published as BJ Immediate Publication 21 August 2007, doi:10.1042/BJ20070881
347–354

Structure-based design of small peptide inhibitors of protein kinase CK2 subunit interaction
B. Laudet, C. Barette, V. Dulery, O. Renaudet, P. Dumy, A. Metz, R. Prudent, A. Deshieere, O. Dideberg, O. Filihol and C. Cochet
Published as BJ Immediate Publication 23 August 2007, doi:10.1042/BJ20070825
363–373

The C-terminus of connexin43 adopts different conformations in the Golgi and gap junction as detected with structure-specific antibodies
Published as BJ Immediate Publication 23 August 2007, doi:10.1042/BJ20070550
375–385

The U3 small nucleolar ribonucleoprotein component Imp4p is a telomeric DNA-binding protein
Y.-C. Hsieh, P.-J. Tu, Y.-Y. Lee, C.-C. Kuo, Y.-C. Lin, C.-F. Wu and J.-J. Lin
Published as BJ Immediate Publication 5 September 2007, doi:10.1042/BJ20070988
387–393

Molecular cloning and biochemical characterization of sialidases from zebrafish (Danio rerio)
M. Manzoni, P. Colombi, N. Papini, L. Rubaga, N. Tiso, A. Preti, B. Venerando, G. Tettamanti, R. Bresciani, F. Argenton, G. Borsani and E. Monti
Published as BJ Immediate Publication 21 August 2007, doi:10.1042/BJ20070627
395–406

The widely utilized brominated flame retardant tetrabromobisphenol A (TBBPA) is a potent inhibitor of the SERCA Ca^{2+} pump
O.A. Ogundabyo and F. Michelangelii
Published as BJ Immediate Publication 5 September 2007, doi:10.1042/BJ20070843
407–415
Characterization of an exported monoglyceride lipase from *Mycobacterium tuberculosis* possibly involved in the metabolism of host cell membrane lipids
Published as BJ Immediate Publication 5 September 2007, doi:10.1042/BJ20070745

[417–427]

Human iron regulatory protein 2 is easily cleaved in its specific domain: consequences for the haem binding properties of the protein
Published as BJ Immediate Publication 31 August 2007, doi:10.1042/BJ20070983

C. Dycke, C. Bougault, J. Gaillard, J.-P. Andrieu, K. Pantopoulos and J.-M. Moulis
