## CONTENTS OF VOLUME 48, No. 4, 1951

(All rights reserved)

Volume calibration of apparatus with standard ground joints, especially Warburg manometers. By F. Dickens. (With one figure) ................................................................. 385

Studies on the metabolism of semen. 7. Cytochrome in human spermatozoa. By T. Mann .......................... 386

The specific determination and detection of glucose as a probable constituent radical of certain fructosans by means of notatin. By A. Palmer .......................................................... 389

The metabolism of sulphamezathine, 4:6-dimethylpyrimidine and 2-amino-4:6-dimethylpyrimidine in the rabbit with observations on the hydroxylation of some other sulphonamides. By H. G. Bray, H. J. Lake and W. V. Thorpe ..................................................... 400

Isolated nuclei from cells of the cerebral cortex. Preparation and enzyme content. By D. Richter and R. P. Hullin ................................................................. 406

Utilization of acetate for milk-fat synthesis in the lactating goat. By G. Popjak, T. H. French and S. J. Folley. (With three figures) .............................................. 411

The amylase of Clostridium butyricum. By W. J. Whelan and H. Nasr. (With six figures) ......................... 416

The relationship between the constitution and the effect of chemical compounds on plant growth. 3. Chlorinated benzaldehydes and benzoic acids. By R. L. Jones, T. P. Metcalfe and W. A. Sexton ......................................................... 422

Selective absorption of stereo-isomers of amino-acids from loops of the small intestine of the rat. By Q. H. Gibson and G. Wiseman ......................................................... 426

Formation by formaldehyde of a cross-link between lysine and tyrosine residues in wool. By P. Alexander, D. Carter and K. G. Johnson. (With four figures) ............... 435

The virulence-enhancing factor of mucins. 3. Further fractionation of hog gastric mucin; an additional factor in the adjuvant action. By H. Smith. (With one figure) .............................................. 441

A statistical evaluation of the lipotropic action of inositol. By C. H. Best, J. H. Ridout, J. M. Patterson and C. C. Lucas. (With one figure) .............................................. 448

The rates of lipotropic action of choline and inositol under special dietary conditions. By C. H. Best, C. C. Lucas, J. M. Patterson and J. H. Ridout. (With four figures) .............. 452

The stabilization of D-amino-acid oxidase by flavin-adenine dinucleotide, substrates and competitive inhibitors. By K. Burton. (With twelve figures) .............................................. 458

The separation and identification of small amounts of mixed amino sugars. By E. F. Annison, A. T. James and W. T. J. Morgan. (With four figures) .............................................. 477

The enzymes of carbohydrate metabolism in Neurospora. 1. Succinic dehydrogenase. By C. J. Shepherd. (With four figures) ................................................................. 483

Removal of acid by trioctylamine from samples for microbiological assay. By D. E. Hughes and D. H. Williamson. (With one figure) ................................................................. 487

Absorption and excretion of pheniodol labelled with radioactive iodine. By A. A. Free, J. E. Page and E. A. Woollett. (With one figure) ......................................................... 490

A re-investigation of the question of activators of carbonic anhydrase. By A. M. Clark and D. D. Perrin. (With seven figures) ................................................................. 495

Appendix. By D. D. Perrin ................................................................. 502

The reaction of oxidizing agents with wool. 4. The reactivity of tyrosine. By P. Alexander and D. Gough. (With two figures) ................................................................. 504
CONTENTS

Proceedings of the Biochemical Society

The amide and free carboxyl groups of insulin. By A. C. CHIBNALL and M. W. REES xlvii
Paper chromatographic separation of urinary phenols and oestrogens. By R. J. BOSCOtt xlvii
The cortisone-iodine complex. By G. T. BASSIL and R. J. BOSCOtt xlviii
A mucoid from sheep submandibular glands inhibiting haemagglutination by influenza virus. By J. F. McCrea xlix
The occurrence of free methylhistidine in urine. By J. M. Searle and R. G. Westall 1
On the cyanide inactivation of succinic dehydrogenase and the relation of succinic dehydrogenase to cytochrome b. By C. L. Tsou lli
The effect of processing methods on the availability of lysine in groundnut meals. By K. J. Carpenter and G. M. Ellinger liii
On the nature of naturally occurring porphyrin precursors. By C. H. Gray liv
Some results with the estimation of plasma protein-bound iodine. By R. Fraser and P. Scarlett lv
Studies of porphyrin metabolism in disorders of the blood-forming organs. By J. C. White and S. Ventura lv
Metabolic response in vivo to electrical stimulation of sections of mammalian brain. By H. McIlWain lvi
The interaction of serum globulins with calcium. By N. H. Martin and D. J. Perkins lvii
The estimation of lactic acid in silage. By A. J. G. Barnett lviii
Hyaluronic acid in exudate from oedematous sexual skin in Rhesus monkeys. By K. G. RiEnits lviii
A counter-current apparatus. By G. H. Lathe and C. R. J. Ruthven lxi
Normal biochemical values for whole blood and serum. By I. D. P. Wootton, E. J. King, I. M. Smith and R. M. Haslam lxi
Trichloroacetic acid precipitation method for lipid phosphate. By E. J. King and W. Weedon lx
An electric heater for micro-Kjeldahl, organic phosphate and other acid digestions. By E. J. King and W. Weedon lx
Interference strip spectrum light filter for photoelectric colorimeter. By E. J. King and W. Weedon lx
Cloudy perspex standards for the turbidimetric estimation of protein and chloride. By E. J. King, T. A. Webster and J. Haslam lxi
Light filters of coloured perspex. By E. J. King and S. Ventura lxi
Determination of copper and zinc in blood serum. By S. Ventura and E. J. King lxi
The effect of compounds allied to resorcinol upon the uptake of radioactive iodine (¹³¹I) by the rat thyroid. By D. G. Arnott and I. Doniach lxii
Calcium method for 0·5 ml. of serum. By E. J. King, D. Bain and V. Pash lxii
