PAGE

Chromatographic studies of nucleic acids. 4. The nucleic acid of the turnip yellow mosaic virus, including a note on the nucleic acid of the tomato bushy stunt virus. By R. Markham and J. D. Smith. (With four figures) ................................. 401

Appendix—A simple filter outfit for the short-wave ultraviolet. By R. Markham and J. D. Smith ................................. 407

The decarboxylation of malic acid by Lactobacillus arabinosus. By P. M. Nossal. (With one figure) ................................. 407

A study of the polyphenols in tea leaf by paper chromatography. By E. A. H. Roberts and D. J. Wood. (With four figures) ................................. 414

The direct colorimetric estimation of reducing sugars and other reducing substances with tetrazolium salts. By R. A. Fairbridge, K. J. Willis and R. G. Booth. (With five figures) ................................. 423

The nature and mechanism of action of the enzymes responsible for tissue respiration during aseptic auto- lysis. By M. U. Dianzani ................................. 427

Some aspects of the metabolism of d- and l-serine by the rat. By H. R. V. Arinstein. (With one figure) ................................. 439

The action of a hydrolytic enzyme system from Helianthus tuberosus L. on carbohydrates present in the tubers. By J. Edelman and J. S. D. Bacon. (With four figures) ................................. 446

The metabolism of pyruvate by Lactobacillus plantarum. By E. Rowatt. (With eight figures) ................................. 453

The amino-acid sequence in the phenylalanyl chain of insulin. 1. The identification of lower peptides from partial hydrolysates. By F. Sanger and H. Tuppy. (With sixteen figures) ................................. 463

The amino-acid sequence in the phenylalanyl chain of insulin. 2. The investigation of peptides from enzymic hydrolysates. By F. Sanger and H. Tuppy. (With six figures) ................................. 481

Cholinesterase inhibition in vitro by OO-diethyl O-p-nitrophenyl thiophosphate (Parathion, E 605). By W. M. Diggle and J. C. Gage. (With four figures) ................................. 491

Iron metabolism and haemoglobin formation in the embryonated hen egg. 2. Some observations on the embryonic blood supply. By W. N. M. Ramsay. (With six figures) ................................. 494

Studies in vitamin A. 15. The variations in the serum β-carotene and vitamin A levels of cows near parturition. By T. W. Goodwin and A. A. Wilson. (With two figures) ................................. 499

The constitution of hexadecatrienoic acid from the glycerides of rape (Brassica napus L.) leaf. By J. K. Heyes and F. B. Shorland. (With one figure) ................................. 503

Further observations on the action of chymotrypsin on insulin. By D. M. P. Phillips. (With four figures) ................................. 506

On the cyanide inactivation of succinic dehydrogenase and the relation of succinic dehydrogenase to cytochrome b. By C. L. Tsou. (With six figures) ................................. 512

Studies on plant formic dehydrogenase. By D. C. Davison. (With three figures) ................................. 520

The colorimetric determination of lactic acid in silage. By A. J. G. Barnett. (With two figures) ................................. 527

Transfructosidation in extracts of the tubers of Helianthus tuberosus L. By J. Edelman and J. S. D. Bacon. (With three figures) ................................. 529

The construction of a counter-current apparatus. By G. H. Lathe and C. R. J. Ruthven. (With four figures) ................................. 540

Turacin and the supposed catalytic activity of copper-porphyrins. By J. Krilin. (With five figures) ................................. 544

Effects of high-voltage cathode rays on aqueous solutions of histidine monohydrochloride. By D. S. Bhatia and B. E. Proctor. (With one figure) ................................. 550

The action of organic acids on some fibrous proteins: the oxidation of wool keratin. By S. Blackburn and A. G. Lowther ................................. 554

Cytochrome b and bacterial succinic dehydrogenase. By A. T. Johns ................................. 559
Contents

Proceedings of the Biochemical Society

Election of Sir Charles Martin to Honorary Membership of the Society .................................................. xl ix
Inhibition of the succinic oxidase system by fluoride. By E. C. Slater and W. D. Bonner, jun. ..................... 1
The lipids of cell nuclei isolated from human brain cortex. By L. W. Tyrrell and D. Richter ...................... li
The metabolism of benzene. The nature and amount of the muconic acid in benzene urine. By D. V. Parke and R. T. Williams ................................................................. lii
Nitrogen metabolism and carotenogenesis in Phycomyces blakesleeanus. By T. W. Goodwin, W. Lijinsky and J. S. Willmer .................................................................................................................. liii
Further observations on ethereal sulphate formation in vivo. By H. G. Bray and K. White ................... liii
The metabolism of anisole and diphenyl ether in the rabbit. By H. G. Bray, W. V. Thorpe and M. R. Wasdell ........................................................................................................................................liv
An examination of frog jelly. By S. P. James ................................................................................................... liv
The liberation of chloride ions from organic chloro-compounds by tissue extracts. By H. G. Bray, W. V. Thorpe and D. K. Vallance ....................................................................................................................... lv
Biosynthesis of globin in the rat. By H. M. Muir, A. Neuberger and J. C. Perrone ........................................ lv
End products of the action of salivary α-amylase on amylose. By P. J. P. Roberts and W. J. Whelan .......... lvi
Selective inhibition of enzymic impurities associated with potato phosphorylase. By J. M. Bailey, G. J. Thomas and W. J. Whelan ........................................................................................................... lvi
Aldehyde mutase and the dismutation of formaldehyde. By L. P. Kendal and A. N. Ramanathan .......... lvii
Some investigations on acid-soluble serum proteins. By D. M. Waldron ...................................................... lviii
Metabolism of lower fatty acids by sheep rumen epithelium. By R. J. Pennington ......................................... lix
Attempts to detect growth hormone in samples of blood and urine obtained during pregnancy or lactation. By P. M. Cotes and F. G. Young ........................................................................................................... lix
A citrate oxidation factor from yeast. By E. C. Foulkes ................................................................................ lx
The oligosaccharides synthesized by Escherichia coli from maltose. By S. A. Barker and E. J. Bourne ........ lix
Non-diffusible ‘cores’ prepared from various deoxypentose nucleic acids. By S. Laland ................................ lix
An electronically controlled tensiometer for the study of changes in surface tension. By R. K. Bayliss and W. F. R. Pover ...................................................................................................................... lxii
Horizontal paper chromatography. By P. Meredith and H. G. Sammons ...................................................... lxii
Apparatus used for study of the kinetics of chemical reactions in vivo. By H. G. Bray, W. V. Thorpe and K. White ....................................................................................................................................... lxii
An apparatus for the estimation of water and electrolyte exchange in rats. By D. F. Cole and S. J. Tranter lxii
Experimental studies in the sprue syndrome. By A. C. Frazer, J. M. French and H. G. Sammons ............ lxiii
