THE T. & M.
MICRO WET GRINDER
for very fine grinding of tissues and soft materials

( THE OUTER GLASS CUP IS DRIVEN FROM BELOW AND THE
GLASS PISTON IS HELD IN THE HAND. THE GRINDING TAKES
PLACE BETWEEN THE TWO GLASS SURFACES—3 MIN. IN
PLACE OF 40 BY NORMAL LABORIOUS HAND GRINDING.)

NO CONTAMINATION
•
REALLY CLEANABLE
•
THREE SIZES OF TUBE
•
INTERCHANGEABLE
PISTONS
•
NO DANGER FROM
BROKEN TUBES

The top of the heavily plated motor cover carries a special labyrinth
so that the whole job can be rinsed down if necessary without
damage to the electrical gear. The rubber mounting for the tubes
makes them practically self-aligning and eliminates the main cause
of breakage.

Standard Tube—20 mm. diam. Capacity 2 ml. to 5 ml.
Alternative —30 mm. diam. Capacity 5 ml. to 10 ml.
" —10 mm. diam. Capacity ½ ml. to 1 ml.

...much more practical and convenient

Paper Chromatography, as any other technique, requires equipment specially designed and made for the job. The latest SHANDON CHROMATANKS are of all-glass construction and have ground tops. Solvent troughs and glass rods are held securely by means of special brackets screwed to the tank sides with air-tight seals. All parts and fittings are completely interchangeable which means easy cleaning and maintenance. There are two types: on the left, Chromatank for one-dimensional work, 22½" high, to take either a 7½" or 10½" solvent trough; on the right, Chromatank for two-dimensional ascending or descending chromatography on sheets 33½ × 31½ cm. (Illustration shows ascending set-up. For descending work a trough is fitted in place of the central support wire.)

SHANDON 6 CROMWELL PLACE, LONDON, S.W.7. KNI.1131

MSE 'medium' centrifuge

1 Litre capacity

speeds up to 4,000 R.P.M.

A bench model, the “Medium” has a maximum capacity of 1,000 ml. when using slotted cups and 600 ml. with metal buckets; it can take up to 64 small glass tubes in multiple carriers. It is a general-purpose centrifuge for both day-to-day and specialised work. A useful choice of interchangeable “Swing-out” and “Angle” heads, a Superspeed Unit and continuous action “Basket” Heads make the MSE “Medium” Centrifuge an extremely versatile machine.

FOR YOUR FILE: MSE make the biggest range of centrifuges in the world in both refrigerated and non-refrigerated types. A brief review of all of them is given in Publication 888. Write for your copy.

SP. 400
Absorptiometer

The SP.400 Absorptiometer retains the best features of the well-known SP.350 and is similar in appearance and operation. The main improvement is the use of a vacuum photocell detector sensitive to the whole wavelength range of 400–700 mμ and combined with a one-stage amplifier from which the output is applied directly to the galvanometer. H.T. and bias voltages are supplied by internal dry batteries. The new photocell is exceptionally reliable and has a sensitivity which allows the use of a narrower entrance slit with a corresponding improvement in performance. A more robust suspension is used in the galvanometer which remains rapid and positive in operation but is very resistant to vibration. These and other features combine to make an inexpensive and reliable instrument for all chemists concerned with routine colorimetric measurements, particularly those in clinical laboratories.

'OXOID'
Bacteriological Peptone

Peptone so controlled during manufacture that batch to batch variation is a minimum.

Suitable for the general culture of bacteria. It is particularly well suited to the examination of foodstuffs and the confirmation of the identity of disinfectants and culture media.

Other 'OXOID' Laboratory Preparations include:

Agar-Agar
Bacteriological Yeast Extract
Desiccated Ox-Bile
Bile Salts
'Lab-Lemco'

The Principles of Biochemistry

By M. V. TRACEY, M.A.

Most biochemistry texts deal mainly with animals or plants or micro-organisms, making only passing references to organisms with which they are not directly concerned. This new book surveys biochemistry as a whole, and is divided into three parts. The first part deals with the cell, the second with the cell in an environment, and only in the last part are the specializations consequent on an animal, plant or parasitic mode of life dealt with. A framework of the more important concepts of biochemistry is presented in a simplified manner which makes the fundamental ideas clear. With four insets.
